

M975 FLIP CHIP TO H854 ADAPTER

CABLE ACCESSORIES

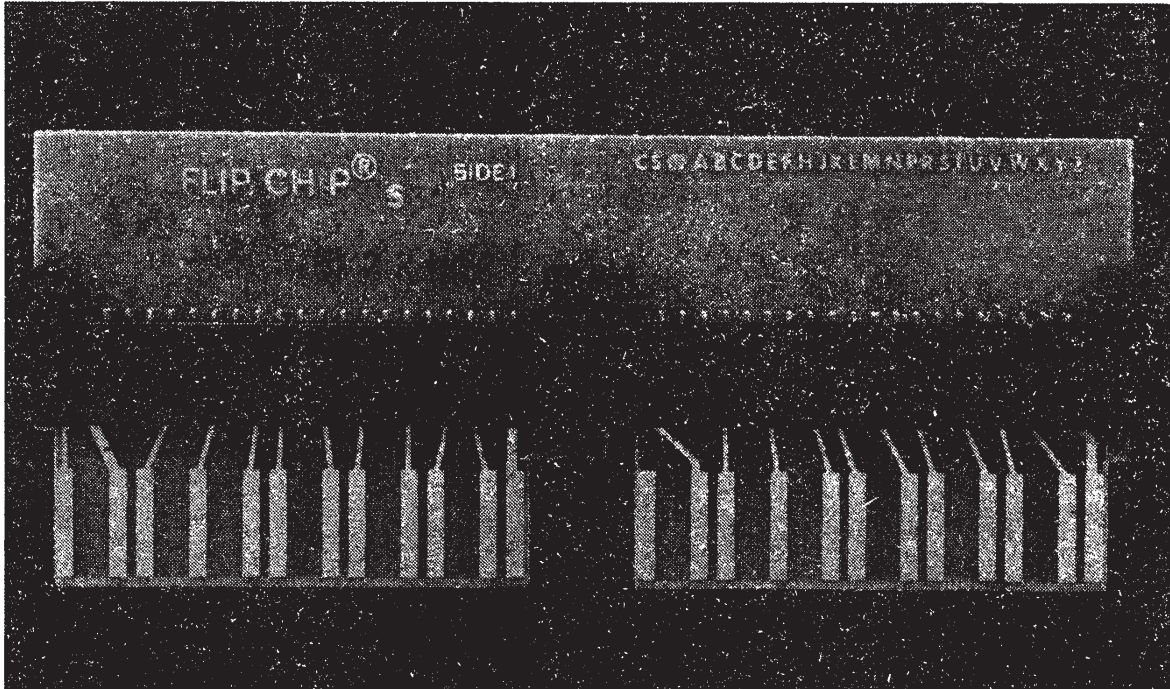

Length: Special

Price:

Height: Double

\$35

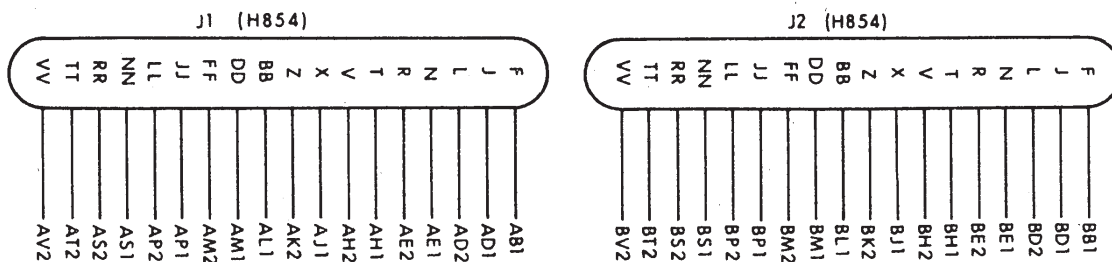

Width: Single

The M975 is an adapter board for use in systems where the need for inputting or outputting logic panel wiring to H854 connectors is desired. The M975, because of its special height, can accommodate up to two BC08J cables. The two H854 connectors on the M975 are not electrically connected and should not be confused with the M9100. When the M975 is installed in the logic panel, it protrudes only 1-1/2 inches. This refers to its special length.

APPLICATIONS

The M975 is compatible with all M Series logic. Although designed primarily for use with the PDP-11, it can be used almost anywhere there is accommodation for a double-height module.

NOTE: All point on J1 and J2 not shown are grounded.
