## ILLUSTRATIONS

Figure	Title	Page
1	Emulated Dashed-Line Patterns . . . . .	33
2	Default Markers . . . . .	81
3	4110 Series Markers . . . . .	81
4	Default Patterns for Emulated Panels. . .	92
5	Sample Characters from Math and Special Symbol Fonts (Option 2C) . . . .	142
6	Sample Characters From English Character Fonts (Option 2B) . . . . .	143
7	Character Cell . . . . .	144
8	Text Positioning With TXICUR . . . . .	145

## TABLES

Table	Title	Page
1	IGL Options and Standard Configurations Included in This Guide . . . . .	7
2	Routines in Alphabetical Order . . . . .	8
3	Character Packing Density . . . . .	19
4	Graphic Action Function . . . . .	19
5	Valid Ranges of Background Indices . .	25
6	Tektronix Devices With Multiple Hardware Fonts . . . . .	36
7	Panel Fill Patterns . . . . .	43
8	Display Surface Sizes of Tektronix Devices . . . . .	45
9	GRSTRT Device/Option Combinations . . . . .	51
10	IGL Default Color Maps . . . . .	84
11	ALU Modes . . . . .	123
12	Plotter Status Report . . . . .	131
13	Status Array Size . . . . .	131
14	Default Text Gaps . . . . .	144
15	Character Cell Sizes (in GDUs) in Tektronix Devices . . . . .	161
16	TYPSET Command Functions . . . . .	162
17	Values Returned by VALOF . . . . .	165
18	Error Numbers . . . . .	170
19	Routines by Functional Category . . . . .	178
20	Routines by Option and Standard Configuration . . . . .	181

## ABOUT THIS GUIDE

The PLOT 10 Interactive Graphics Library User's Reference Guide briefly describes all user-level IGL routines. It gives the syntax, the purpose, a brief description of all input and output arguments, and error messages for each routine.

For a complete explanation of the syntax and function of all routines, refer to the PLOT 10 Interactive Graphics Library User's Manual and the user's manuals for separately documented IGL options.

### NOTE

*This reference guide supports IGL level 2.0 and IGL level 3.0.*

Table 1 lists all IGL options having routine descriptions in this guide. (Table 1 does not cover Host I/O or device driver options — level 2 IGL — that do not have user-callable routines.)

Table 2 lists all IGL routines alphabetically and includes the arguments for each routine. This list may serve as a reminder of argument name and position, and as an index to this guide.

Tables 18, 19, and 20 (at the end of this guide) arrange all IGL routines by

- Error number, Table 18
- Functional category, Table 19
- Option (IGL level 2.0) and Standard Configuration (IGL level 3.0), Table 20

The principle part of this reference guide consists of routine descriptions arranged alphabetically. Each routine description begins with the routine name and argument(s) in bold type. Following these is a short statement of the purpose of the routine. Next, the input and output argument names are given along with definitions. Default values of arguments are given where appropriate. Error messages are explained if necessary, and notes point out device-dependent or software-specific information.

At the end of the guide is an ASCII Code Chart for use in text conversions. To help with color selection, you can refer to the Tektronix Color Standard on the back cover.

**Table 1**

**IGL OPTIONS AND STANDARD CONFIGURATIONS INCLUDED IN THIS GUIDE**

<b>Name</b>	<b>Level 2.0 Option</b>	<b>Level 3.0 Standard Config.</b>
4662 Device Driver	1D	20 & up
4663 Device Driver	1E	21 & up
4112/4113 Device Driver	1F	23 & up
4027 Device Driver	1H	21 & up
4114 Device Driver	1J	23 & up
4110 Series Special Feature Escapes	1K	23 & up
Primary Command Set	2A	20 & up
English Character Fonts	2B	21 & up
Math and Special Symbol Fonts	2C	21 & up
Panel Emulation	3C	21 & up
Graphics Text Emulation	3D	21 & up
Line Smoothing Emulation	3E	22 & up
Graphic Segments Support	4A	23 & up
3-D Graphics Support	4B	24
Panel Support	4C	21 & up
Graphics Text Composer	4D	21 & up
Line Smoothing Support	4E	22 & up

## ROUTINES IN ALPHABETICAL ORDER

Table 2 gives the page number, routine number, and arguments for each routine included in this guide. Here you can quickly scan the list and find the names and order of each routine's arguments.

Look in the Error Numbers Table (Table 18) to find the routine associated with an error number. See the Routines by Functional Category (Table 19) or Routines by Option Tables (Table 20) to find routines organized by category and IGL option.

Table 2

ROUTINES IN ALPHABETICAL ORDER			Page	Number	Routine (Arguments)
Page	Number	Routine (Arguments)			
18	026	ADDCHR (IFONT,ICHAR,ILEN,ISTR)			CLRMAP (IMAPNO,ITYPE,PCOLOR)
20	019	ADDENT (IFONT,ICHN,IXMIN,IXMAX, IYMIN,IYMAX,ILOCHR,IHICHR)	28	152	CLRPLT (ICOLOR,IDEVIC,IDEVOP,QERASE)
20	339	ADDMBR (ISEG,INUM,IARRAY)	28	461	CMCLOS
21	542	ADVME (PDIST)	29	201	CMOPEN
21	119	APPEAR	29	200	COPY (NROWS,ZIN,ZOUT)
21	004	ARC (PRAD,PSTARA,PENDA)	29	179	
22	015	ARC3PT (PX2,PY2,PX3,PY3)	30	320	CPYCHR (IFNT1,ICHR1,IFNT2,ICHR2)
22	089	BATCH (QBAT)	30	036	CPYSEG (ISEG)
22	154	BAUDRT (IBAUD)	30	097	CRDLFT
23	299	BB2W3 (PXGDU,PYGDU,POINT)	30	098	CRDRHT
23	430	BEG1X (ICHR1,ICHR2,IMAXSZ,IBUF)	31	186	CVC2I (ILENST,ICHRAY,ICNVTD,ISTOPD)
24	520	BEG63 (ICMD1,ICMD2,IMAXSZ,IBUF)	31	187	CVC2R (ILENST,ICHRAY,PCNVTD,ISTOPD)
24	041	BELL	31	184	CVI2C (I2CONV,ILENST,ICHRAY)
24	047	BILLBD (ORG,XMAX,YMAX)	32	185	CVR2C (P2CONV,ILENST,ICHRAY,IPASTD)
25	121	BKGCLR (ICOLOR)	32	114	DASHPT (IPAT)
25	488	BORDER (IBVIS)	33	074	DEGREE
25	532	BPROC (INMPRO)	34	029	DELCHR (IFONT,ICHAR)
26	062	CAMERA (QCAMRA)	34	028	DELFNT (IFONT)
26	437	CHR1X (ICHAR,IBUF)	35	340	DELMBR (ISEG,INUM,IARRAY)
26	442	CHRY1X (ICHCNT,ICHARY,IBUF)	35	034	DELSEG (ISEG)
27	528	CHRY63 (ICHCNT,ICHARY,IBUF)	36	483	DELVW (IVWNUM)
27	053	CLIP	36	039	DEVFNT (IFNT,IHDFNT)
27	159	CLOCAP	37	283	DIST (ICNT,PX,PY,PS)
27	105	CLOPOL	37	468	DLTCHR (IFONT,ICHAR)
28	033	CLOSEG	38	006	DPOLAR (PDIST,PANGLE)
			38	535	DPROC (INMPRO)
			38	002	DRAW (PX,PY)
			38	011	DRAW3D (PX,PY,PZ)
			39	464	DRGSEG (ISEG)
			39	460	DWNFNT (IFNT,IDVFNT)
			40	052	EDGE (PXMIN,PXMAX,PYMIN,PYMAX)
			40	099	EDGE3D (PUMIN,PUMAX,PVMIN,PVMAX)
			40	432	END1X (IBUF,QSEND)
			41	522	END63 (IBUF,QSEND)
			41	107	ENDPNT (PX,PY)
			41	109	ENDSLP (PDX,PDY)

Page	Number	Routine (Arguments)
41	533	EPROC
42	060	EYEBAL (PDX,PDY,PDZ)
42	315	FATLIN (ICNT,PX,PY,IN,PD,ITYPE)
43	057	FBCP3D (PFDST,PBDST)
43	173	FILPAN (IPATNO,QOUTLN)
44	489	FIXUP (ILEVEL)
44	446	GCHR1X (IBUF,ICHR)
44	091	GDUNIT
45	018	GETPIK (IDSEG,IDPIK)
46	491	GETPXL (ICNT,IPIXRY, IENCOD,QEOF,IGOT)
47	025	GETUIN (ILENP,IPRRAY, ITOGET,INARRY,IGOT)
47	024	GETURN (ILENP,IPRRAY, ITOGET,PINRAY,IGOT)
48	023	GETUTX (ILENP,IPRRAY, ITOGET,INARY,IGOT)
48	450	GINT1X (IBUF,IVAL)
49	530	GINT63 (IARY,ISIZE,I1WORD,I2WORD)
49	087	GRADS
49	116	GRAIN (PGRAIN)
50	449	GRL1X (IBUF,PVAL)
50	156	GRSTOP
50	155	GRSTRT (IDEVIC,IOPT)
52	448	GXY1X (IBUF,PX,PY)
52	042	HDCOPY
52	206	HFCLOS (ICHN,QDELET)
53	207	HFENQ (ICHN,IARRAY)
54	205	HFOPEN (ICHN,IFNAM, IFFMT,IFILSZ,IRECSZ)
55	210	HFREAD (ICHN,ICNT,IARRAY,QEOF)
55	214	HFRNR (ICHN,IRECNO,PARRAY)
56	215	HFRNW (ICHN,IRECNO,PARRAY)
56	212	HFSQR (ICHN,ICNT,PARRAY,QEOF)
57	213	HFSQW (ICHN,ICNT,PARRAY)
57	211	HFWRIT (ICHN,ICNT,IARRAY)
57	043	HOME
58	504	HSTCPY (IDIRCT,IORGLN, IORGFL,IDESLN,IDESFL)
59	537	I2BIN (IWORD,ISIZE,IARRAY)
59	153	IERRNM (QCLEAR)

Page	Number	Routine (Arguments)
59	093	INCHES
60	176	INIFIL (IFNAM,IFILSZ,IMXFNT)
60	177	INIFNT
60	359	INQ2PV (ISEG,PX,PY)
61	357	INQ2TN (ISEG,PSX,PSY,PANG,PTX,PTY)
61	360	INQ3PV (ISEG,PX,PY,PZ)
62	358	INQ3TN (ISEG,PSX,PSY,PSZ, PAX,PAY,PAZ,PTX,PTY,PTZ)
62	352	INQAPT (PVAL)
63	354	INQBTM (IVAL)
63	365	INQCLS (ISEG,INUM,IARRAY,IGOT)
64	509	INQCRV (ICURVW)
64	467	INQCUR (ISEG)
64	363	INQDET (ISEG,QVAL)
65	463	INQDM (ISEG,IMODE)
65	543	INQFML (PDIST)
66	466	INQGIN (IDEV)
66	421	INQGRD (PXGRID,PYGRID)
66	362	INQHIL (ISEG,QVAL)
67	423	INQINK (INK)
67	366	INQMCL (IMNUM,IMRAY, IMGOT,INMNUM,INMRAY,INMGOT)
68	367	INQNMS (ISEG,INUM,IARRAY,IGOT)
68	510	INQPBM (IXPOS,IYPOS)
68	355	INQPID (ID)
69	470	INQPNL (IOVR,IFBDRY,ISYNCH)
69	364	INQPRI (ISEG,IPRTY)
70	496	INQPVV (IXMIN,IXMAX,IYMIN,IYMAX)
70	507	INQPXL (ISRFNM,IALU)
71	428	INQRUB (IRUBND)
71	485	INQSRF (ISRFNM,IPLAN,ISVIS,ISPRIO)
72	425	INQSTR (QSTR,ITIME,PDIST)
72	356	INQTRN (ISEG,PX,PY)
73	353	INQTYP (ISEG,ITYPE)
73	361	INQVIS (ISEG,QVAL)
74	481	INQVW (IVWNUM,IDEFIN, ISRFNM,IBCKGD,IBORDR,PDIMEN)
74	439	INRY1X (INCNT,IARRAY,IBUF)

Page	Number	Routine (Arguments)
75	433	INT1X (IVAL,IBUF)
75	523	INT63 (IVAL,IBUF)
75	022	INUMBR (INTVAL,IMXCHR)
76	182	KA12AS (ICNT,IA1RAY,IASRAY)
76	180	KAM2AS (ICNT,IAMRAY,IASRAY)
76	183	KAS2A1 (ICNT,IASRAY,IA1RAY)
77	181	KAS2AM (ICNT,IASRAY,IAMRAY)
77	120	LINCLR (ICOLOR)

## ROUTINE DESCRIPTIONS

### ADDCHR(IFONT,ICHAR,ILEN,ISTR)

"Add character"

#### Purpose

Adds a new character to a font

#### Inputs

**IFONT** The number of the font in local storage to which the character is to be added

**ICHAR** Character to be added; specified in current text format (ADE, A1, or AM)

**ILEN** Length of array which defines character to be added

**ISTR(ILEN)** Array containing definition of the new character. A character is defined by an encoded integer string (ISTR) developed by the following equation. The terms in the equation are explained in Tables 3 and 4

$$\text{INTEGER} = -(\text{PACKING DENSITY} * 100 + \text{GRAPHIC FUNCTION})$$

#### Errors

02601 Font number (IFONT) out of range (0, value defined at installation); no-op

02602 Character (ICHAR) out of user-defined range; no-op

02621 Font (IFONT) not in local font table; no-op

02622 Integrity error: wrong font (IFONT) termination code; no-op

02623 Integrity error: wrong font (IFONT) header termination code; no-op

02624 Character (ICHAR) is already defined; no-op

02625 Not enough room in local IGL font table to add character description; no-op

**Table 3**  
**CHARACTER PACKING DENSITY**

Density Value	Character Definition
1	Coordinates are packed two pairs per integer according to the following formulas: $\text{PAIR1} = X1 * 16 + Y1 + 3$ $\text{PAIR2} = X2 * 16 + Y2 + 3$ $\text{INTEGER} = \text{PAIR1} * 256 + \text{PAIR2}$ If the second pair of points is not needed (an odd number of points is used), assign it a value of 128. X and Y values must be within the following range: $0 < = X < 7$ $-3 < Y < 12$
2	Coordinate pairs are packed one per integer, according to the following formula: $\text{INTEGER} = (X + 50) * 256 + Y + 50$ X and Y values must be within the following range: $-50 < = X < = 77$ $-50 < = Y < = 205$
3	Coordinates occupy adjacent words in the array, both biased by a value of 10,000. X and Y values must be within the following range: $-10000 < = X < = 22767$ $-10000 < = Y < = 22767$

**Table 4**  
**GRAPHIC ACTION FUNCTION**

Graphic Function	Purpose
1	Draw vectors
2	Draw dots
3	Draw panels
4	Draw fill
5	Draw arc, as per ARC3PT
6	Initialize line smoothing
7	Terminate line smoothing
8	Set character size
9	Draw "fat" lines

**ADDFONT(IFONT,ICHN,IXMIN,IXMAX,IYMIN,IYMAX,ILOCHR,IHICHR)**

"Add font"

**Purpose**

Adds a new font to the IGL font table

**Inputs**

IFONT A number identifying font to be added  
 ICHN Channel to be used to read the font; set to 0  
 IXMIN Minimum X value of the digitizing space within which a prototypical character, usually an upper-case M, is defined  
 IXMAX Maximum X value of the digitizing space within which a prototypical character is defined  
 IYMIN Minimum Y value of the digitizing space within which a prototypical character is defined  
 IYMAX Maximum Y value of the digitizing space within which a prototypical character is defined  
 ILOCHR ASCII decimal equivalent (ADE) value of first character in font  
 IHICHR ADE value of last character in font

**Errors**

01901 Font number (IFONT) out of range: (0,value set at installation); no-op  
 01911 Font (IFONT) already defined; no-op  
 01921 Not enough room in local IGL font table to add font description; no-op

**ADDMBR(ISEG,INUM,IARRAY)**

"Add (a) member (to a segment class)"

**Purpose**

Adds a member to one or more segment classes

**Inputs**

ISEG  
 -1 All retained segments are to be added to the specified classes  
 -2 A default segment class membership is being defined  
 -3 The members of the match class are to be added to the specified classes  
 1-32767 Integer name of a segment to be added to classes  
 INUM The number of classes the segment should be added to  
 IARRAY The list of classes the segment should be added to

(continued, next page)

**Errors**

01951 Segment ISEG is not an existing retained segment; no-op  
 01952 Parameter INUM < 0; no-op  
 01953 Class ID out of range (-1,1 through 64); no-op  
 01961 Illegal to modify dynamic attribute of open segment; no-op  
 01962 Number of classes > 64, use first 64; report  
 01971 Parameter ISEG out of range; no-op

**ADVME(PDIST)**

"Advance (the) media"

**Purpose**

Advances the media

**Inputs**

PDIST Distance the media is to advance in display surface units

**Errors**

22251 PDIST less than or equal to 0; no-op  
 22271 Media advance option not present on device; no-op

**APPEAR**

"(Vector) appear"

**Purpose**

Returns device from selective erase mode; this is the default

**Note**

Requires device capable of selective erasing

**ARC(PRAD,PSTARA,PENDA)**

"Arc (draw)"

**Purpose**

Draws an arc counterclockwise with the given radius, from the starting angle to the ending angle

**Inputs**

PRAD The radius for the arc; the current cursor position is the centerpoint  
 PSTARA Starting angle for the arc  
 PENDA Ending angle for the arc

**Errors**

00401 PRAD less than or equal to 0; no-op

**ARC3PT(PX2,PY2,PX3,PY3)**

"Arc three point"

**Purpose**

Draws an arc counterclockwise starting from the current cursor position through the two points specified

**Inputs**

PX2	The X coordinate of the point through which arc is to pass
PY2	The Y coordinate of the point through which arc is to pass
PX3	The X coordinate of the point at which the arc is to end
PY3	The Y coordinate of the point at which the arc is to end

**BATCH(QBAT)**

"Batch (display changes)"

**Purpose**

Begins and ends display change batching

**Inputs**

QBAT	
.TRUE.	Starts batching of display changes
.FALSE.	Ends batching of display changes

**Errors**

08901	Batching was already in effect
08921	Illegal to change batching with a retained segment open; no-op

**BAUDRT(IBAUD)**

"Baud rate"

**Purpose**

Sets the baud rate for IGL communications

**Inputs**

IBAUD	Specified baud rate (e.g.1200)
-------	--------------------------------

**Errors**

15401	IBAUD < 0; no-op
-------	------------------

**BB2W3(PXGDU,PYGDU,POINT)**

"Billboard to world (coordinate system in) 3-D"

**Purpose**

Transforms a point in the viewport from 2-D to 3-D world coordinate system units

**Inputs**

PXGDU,	Point in 2-D (in GDU's)
PYGDU	

**Outputs**

POINT(3)	3-D World Coordinate System point returned
----------	--

**Errors**

29921	No billboard defined; no-op
-------	-----------------------------

**BEG1X(ICHR1,ICHR2,IMAXSZ,IBUF)**

"Begin (a) 4110 series (terminal command)"

**Purpose**

Begins a 4110 command by initializing the terminal command buffer

**Inputs**

ICHR1	First command character (in user text format)
ICHR2	Second command character (in user text format)
IMAXSZ	The maximum size of IBUF
IBUF	The terminal command buffer

**Outputs**

IBUF	The initialized terminal command buffer
------	---

**Errors**

11051	First command character (ICHR1) is not in ASCII range (0,127); no-op
11052	Second command character (ICHR2) is not in ASCII range (0,127); no-op

**BEG63(ICMD1,ICMD2,IMAXSZ,IBUF)**

"Begin 4663 (Plotter command)"

**Purpose**

Begins a 4663 Plotter style command by initializing the plotter command buffer

**Inputs**

ICMD1 First cmd char in user text format  
 ICMD2 Second cmd char in user text format  
 IMAXSZ The maximum length of IBUF  
 IBUF The plotter command buffer

**Outputs**

IBUF The initialized plotter command buffer

**Errors**

20051 1st cmd char out of range (must be a letter); no-op  
 20052 2nd cmd char out of range (must be letter/space); no-op  
 20053 Buffer size too small: must be dimensioned to a minimum of 7; no-op

**BELL**

"(Ring the device's) bell"

**Purpose**

Makes device bell ring

**BILLBD(ORG,XMAX,YMAX)**

"Billboard"

**Purpose**

Defines a two-dimensional billboard in the 3-D world coordinate system for displaying text and 2-D graphics

**Inputs**

ORG(3) An array containing the X, Y, and Z coordinates of the origin of the billboard  
 XMAX(3) An array containing the X, Y, and Z coordinates of the point which determines the extent of the X-axis  
 YMAX(3) An array containing the X, Y, and Z coordinates of the point to which the Y-axis of the billboard is to extend

**Errors**

04702 Points defined by ORG and YMAX are too close; no-op  
 04703 Points defined by ORG and XMAX are too close; no-op  
 04713 The X- and Y-axes defined by the three arrays are the same line (co-linear); no-op  
 04723 Illegal to modify viewing with retained segment open; no-op

**BKGCLR(ICOLOR)**

"Background color"

**Purpose**

Specifies the desired background color

**Inputs**

ICOLOR The index of the desired color; see Table 5

**Note**

Requires device capable of displaying color.

**Table 5****VALID RANGES OF BACKGROUND INDICES**

4027	0-7	Solid color
	8-127	Color pattern
4112	0-1	1 bit plane
4112/13	0-7	3 bit planes
4113	0-15	4 bit planes

**BORDER(IBVIS)**

"Border"

**Purpose**

Makes a border around the current (active) view visible or invisible

**Input**

IBVIS Border visibility switch  
 0: Turn the border off  
 1: Turn the border on  
 2: Reverse the current border visibility

**Errors**

16851 Border attribute out of range (0,2); no-op  
 16871 No local bordering capability on current device; no-op

**BPROC(INMPRO)**

"Begin (downloadable) procedure (definition)"

**Purpose**

Begins a downloadable procedure definition

**Inputs**

INMPRO The downloadable procedure number to be defined (0,255)

**Errors**

21251 INMPRO out of range (0,255); no-op  
 21271 Downloadable procedure not present on device; no-op  
 21272 Segment is open, cannot download procedure

**CAMERA(QCAMRA)**

"Camera (mode on)"

**Purpose**

Specifies viewing mode

**Inputs**

QCAMRA

.TRUE.	Camera mode (default)
.FALSE.	SIG mode

**Errors**

06221 Illegal to modify viewing environment with retained segment open; no-op

**CHR1 X(ICHAR,IBUF)**

"(Encode a) character (for a) 4110 series (terminal)"

**Purpose**

Place a user text format character in the terminal command buffer

**Inputs**

ICHAR	A character in user text format to be placed in the terminal command buffer
-------	---

IBUF	The terminal command buffer
------	-----------------------------

**Outputs**

IBUF	The updated terminal command buffer
------	-------------------------------------

**Errors**

11751 Character (ICHAR) not in ASCII range (0,127); no-op

11752 Terminal command buffer (IBUF) is too small for data; no-op

**CHRY1 X(ICHCNT,ICHARY,IBUF)**

"(Encode a) character array (for a) 4110 series (terminal)"

**Purpose**

Places a user text format string in the terminal command buffer

**Inputs**

ICHCNT	Number of characters in the string
ICHARY	Array containing characters in current text format

IBUF	The terminal command buffer
------	-----------------------------

**Outputs**

IBUF	The updated terminal command buffer
------	-------------------------------------

**Errors**

12251 Array length (ICHCNT) out of range (0,100); no-op

12252 A character is not in ASCII range (0,127); no-op

**CHRY63(ICHCNT,ICHARY,IBUF)**

"(Encode a) 4663 character array"

**Purpose**

Converts a character string from current user text format to ADE, and puts a character string into the plotter command buffer

**Inputs**

ICHCNT	Number of characters in the string
ICHARY	Array containing characters in current text format

IBUF	Plotter command buffer
------	------------------------

**Outputs**

IBUF	Updated plotter command buffer
------	--------------------------------

**Errors**20851 ICHCNT is out of range (1,100); no-op  
20853 IBUF too small to translate string to ADE; no-op**CLIP**

"Clip (vectors at clipping edge)"

**Purpose**

Activates clipping; this is the default

**Errors**

05321 Illegal to modify viewing with ret. seg open; no-op

**CLOCAP**

"Close capture (file)"

**Purpose**

Terminates input to a capture/replay file

**Errors**

15921 Communications are not currently open; no-op

**CLOPOL**

"Closed polygon"

**Purpose**

Specifies that subsequent calls to POLY define closed polygons

**CLOSEG**

"Close segment"

**Purpose**

Closes the open retained segment

**Errors**

03311 There is no retained segment open; no-op

**CLRMAP(IMAPNO,ITYPE,PCOLOR)**

"Color map"

**Purpose**

Specifies a color to be updated or added to the color index

**Inputs**

IMAPNO Index number (0-15) assigned to the defined color; see Table 10

ITYPE Specifies method of defining the color  
 1 RGB (Red, green, blue)  
 2 CMY (Cyan, magenta, yellow)  
 3 HLS (Hue, lightness, saturation)

PCOLOR(3) Color as defined by percentages of each parameter of the indicated ITYPE

**Note**

Requires device capable of displaying color

**CLRPLT(ICOLOR,IDEVIC,IDEVOP,QERASE)**

"Plot colored primitives (with a new device)"

**Purpose**

Draws all visible retained segment primitives of a given color or gray index on a specified device

**Inputs**

ICOLOR  
 -1 Draws all visible primitives, using the current line color index  
 0-N A number indicating the color index of visible primitives to be drawn (those with different indices are omitted)

IDEVIC The number (4027, 4663, etc.) of the output device

IDEVOP The option number of the output device

QERASE If .TRUE. the display surface is cleared before drawing  
 If .FALSE. the display surface is not cleared before drawing

**Errors**

14151 Illegal color index; no-op

14171 Illegal to plot while a segment is open;

14172 CLRPLT command not valid without segments; no-op

**Note**

Requires device capable of displaying color

**CMCLOS**

"Communications close"

**Purpose**

Temporarily closes IGL communication with the terminal

**Errors**

20121 Communications already closed; no-op

**CMOPEN**

"Communications open"

**Purpose**

Establishes IGL communication with the terminal; this is the default

**Errors**

20021 Communications are already opened; no-op

**COPY(NROWS,ZIN,ZOUT)**

"Copy (matrix)"

**Purpose**

Copies a four-column matrix into another matrix

**Inputs**

NROWS Number of rows in both matrices

ZIN(NROWS,4) Input matrix

**Outputs**

ZOUT(NROWS,4) Output matrix

**Errors**

17901 Exit NROWS.LT.1; no-op

**CPYCHR(IFNT1,ICHR1,IFNT2,ICHR2)**

"Copy character"

**Purpose**

Copies a character from one font to another

**Inputs**

IFNT1 Font from which character is to be copied  
 ICHR1 Character to be copied, specified in current text format (ADE, A1, or AM)

IFNT2 Font to which ICHR1 is to be copied  
 ICHR2 Character to which ICHR1 is to be copied, specified in current text format room in NFNTBL

**Errors**

32002 ICHR1 not defined; no-op  
 32004 ICHR2 out of range for characters in IFNT2; no-op  
 32021 Not enough room in local IGL font storage to add character description; abort

**CPYSEG(ISEG)**

"Copy segment"

**Purpose**

Copies the contents of an existing retained segment into the open retained segment

**Inputs**

ISEG Integer name of the segment to be copied

**Errors**

03601 Segment ISEG is not an existing retained segment; no-op  
 03602 ISEG is the currently open segment; no-op  
 03611 ISEG is 0 or negative; no-op  
 03621 No retained segment is open to copy into; no-op  
 03622 Incompatible type of segs; cannot copy; no-op

**CRDLFT**

"Coordinate left (3-D)"

**Purpose**

Sets the 3-D world coordinate system to left-handed

**CRDRHT**

"Coordinate right (3-D)"

**Purpose**

Sets the 3-D world coordinate system to right-handed; this is the default

**CVC2I(ILENST,ICHRAY,ICNVTD,ISTOPD)**

"Convert character to integer"

**Purpose**

Converts (decodes) character strings to FORTRAN integer variables

**Inputs**

ILENST Number of characters in string to be converted  
 ICHRAY(ILENST) String to be converted

**Outputs**

ICNVTD Result of the conversion  
 ISTOPD Set to the location of the character which terminates the conversion

**Errors**

18601 ILENST out of range (1,25); no-op

**CVC2R(ILENST,ICHRAY,PCNVTD,ISTOPD)**

"Convert character to real"

**Purpose**

Converts (decodes) numerical strings to FORTRAN real variables

**Inputs**

ILENST Number of characters to be converted  
 ICHRAY(ILENST) Array of characters to be converted

**Outputs**

PCNVTD Result of the conversion  
 ISTOPD Set to the location of the terminating character, or to ILENST + 1 if there was no terminating character

**Errors**

18701 ILENST less than or equal to 0; no-op  
 18721 Conversion terminated by non-numeric character; ISTOPD set  
 18722 Exponent overflow; indeterminate result in PCNVTD  
 18723 No legal number converted, PCNVTD set to 0.0

**CVI2C(I2CONV,ILENST,ICHRAY)**

"Convert integer to character"

**Purpose**

Converts (encodes) FORTRAN integer variables to numerical strings

**Inputs**

I2CONV The integer to be converted  
 ILENST Number of characters in ICHRAY

**Outputs**

ICHRAY(ILENST) Result of the conversion

**CVR2C(P2CONV,ILENST,ICHRAY,IPASTD)**

"Convert real to character"

**Purpose**

Converts (encodes) FORTRAN real variables to character strings

**Inputs**

P2CONV The real variable to be converted  
 ILENST Number of characters in ICHRAY  
 IPASTD Number of digits to appear past the decimal point, to a maximum of 23; a value of -1 suppresses the decimal point

**Outputs**

ICHRAY(ILENST) Result of the conversion

**Errors**

18502 ILENST less than or equal to 0; no-op  
 18504 IPASTD out of range (-1,23); no-op  
 18521 String not long enough for conversion; fills string with asterisks

**DASHPT(IPAT)**

"Dash pattern"

**Purpose**

Specifies pattern for dashed lines

**Inputs**

IPAT An integer indicating the desired dashed-line pattern

0 Specifies that a solid line should be drawn; this is the default

1-9 Specifies hardware-generated dashed-line pattern. For devices without appropriate hardware, an internal IGL routine is called for emulation (see Figure 1). Hardware and software patterns may look slightly different, as may hardware patterns displayed by different devices

< 0 or ≥ 10 A two or more digit sequence to define a pattern, described by a DRAW-MOVE sequence; units are always in GDUs.

For example, the integer 12 dictates a DRAW of GDU in length and a MOVE of 2 GDUs. Zero means a dot. A negative sign can be used to force a leading zero. The maximum number of digits used to define the line pattern depends on the maximum integer your computer allows, but cannot exceed 9

**Errors**

11401 IPAT &gt; 9 digits; no-op

**DEGREE**

"Degrees"

**Purpose**

Declares that angles are specified in degrees (default)

Figure 1. Emulated Dashed-Line Patterns.

2686-2

**DELCHR(IFONT,ICHAR)**

"Delete character"

**Purpose**

Deletes a character from a font

**Inputs**

IFONT Identification number of font from which character is to be deleted

ICHAR Character to be deleted; specified in current text format (ADE, A1, or AM)

**Errors**

02901 Font number out of range; no-op

02902 Character out of range; no-op

02911 Font not defined; no-op

02912 Character not defined; no-op

02921 Font integrity error (incorrect font pointer table termination code); abort

02922 Font integrity error (incorrect font header identification); abort

02923 Font integrity error (incorrect font header termination code); abort

**DELFONT(IFONT)**

"Delete font"

**Purpose**

Deletes a font from IGL's temporary font storage

**Inputs**

IFONT Identification number of font to be deleted

**Errors**

02801 Font number out of range; no-op

02811 Font not defined; no-op

02821 Font integrity error (incorrect font pointer table termination code); abort

**DELMBR(ISEG,INUM,IARRAY)**

"Delete (a) member (from a segment class)"

**Purpose**

Deletes a member from one or more segment classes

**Inputs**

ISEG

—3 Indicates that all segments are to be deleted from the specified class or classes

—2 Indicates that all subsequently defined segments are to be deleted from the specified class or classes

—1 Indicates that all segments are to be removed from the specified class or classes

1-32767 The name of a single segment to be removed from the specified class or classes

INUM The number of classes from which the segment should be removed

IARRAY The list of classes from which the segment should be removed

**Errors**

02051 Segment ISEG is not an existing retained segment; no-op

02052 Parameter INUM is < 1; no-op

02053 Class ID is out of range (—1, 1 through 64); no-op

02061 Illegal to modify dyn. attribute of open segment; no-op

02062 Number of classes > 64, use first 64; report

02071 Parameter ISEG out of range; no-op

**DELSEG(ISEG)**

"Delete segment"

**Purpose**

Deletes a retained segment or segments

**Inputs**

ISEG

—1 Indicates that all retained segments are to be deleted

—3 Indicates that all segments in the match class are to be deleted

1-32767 Indicates a specific retained segment to be deleted

**Errors**

03401 Retained segment ISEG does not exist; no-op

**DELVW(IVWNUM)**

"Deletes the specified view"

**Purpose**

Deletes the specified view

**Inputs**

IVWNUM The number of the view to be deleted (1,16); -1 deletes all views

**Errors**

16351 View is out of range for current device; no-op  
 16371 No multiple view capability on device; no-op  
 16372 Attempted to delete current view; no-op  
 16373 Attempted to delete an undefined view; no-op

**Note**

Requires device with multiple view capability

**DEVFNT(IFNT,IHDFNT)**

"Device font"

**Purpose**

Associates IGL font number with device font number

**Inputs**

IFNT IGL font number to be associated with hardware font  
 IHDFNT Number of hardware font as it is known to a device (see Table 6)

**Errors**

03902 IHDFNT out of range for device; no-op

**Note**

Requires device with multiple hardware fonts; Table 6

**Table 6****TEKTRONIX DEVICES WITH  
MULTIPLE HARDWARE FONTS**

Device	Hardware Capabilities
4025/27	Font 0 resident; expandable to 32 fonts (0-31)
4112/13/14	Font 0 resident; expandable to 32767 fonts (0-32767)
4662	Fonts 0-9 resident; expandable to 16 fonts (0-15)
4663	Fonts 0-9 resident (font 7 reserved for APL); expandable to 16 fonts (0-15)

**DIST(ICNT,PX,PY,PS)**

"(Calculate) distances"

**Purpose**

Computes cumulative distances along a line

**Inputs**

ICNT Number of points in the line  
 PX(ICNT) Array containing the X coordinates of the line  
 PY(ICNT) Array containing the Y coordinates of the line

**Outputs**

PS(ICNT) The cumulative distances along the line

**DLTCHR(IFONT,ICHAR)**

"Delete (downloaded) character"

**Purpose**

Deletes a downloaded character from a device font

**Inputs**

IFONT Device font number from which character is to be deleted (-1 to device maximum); if IFONT = -1, all fonts are deleted  
 ICHAR Character to be deleted, current user format (-1 to 127). If ICHAR = -1, all characters in the specified font will be deleted

**Errors**

14851 Font (IFONT) not equal to -1 or greater than device limits; no-op  
 14852 Character (ICHAR) not equal to -1 and out of range (0 to 127); no-op  
 14871 Device does not support downloaded characters; no-op  
 14872 Graphic text emulation (Option 3D) expected but not present; no-op

**DPOLAR(PDIST,PANGLE)**

"Draw (in a) polar (coordinate system)"

**Purpose**

Draws an arc from the current cursor location to the specified polar coordinates

**Inputs**

PDIST            The distance from the pivot point  
PANGLE          Angle component of destination point

**DPROC(INMPRO)**

"Delete Procedure (Definition)"

**Purpose**

Deletes a downloaded procedure definition

**Inputs**

INMPRO          The downloaded procedure number to be deleted (0 to 255); -1 deletes all procedures

**Error**

21551            INMPRO out of range (-1 to 255); no-op  
21571            Downloadable procedures not present on device; no-op

**DRAW(PX,PY)**

"Draw (a vector)"

**Purpose**

Draws a vector from current location to a specified point

**Inputs**

PX                X coordinate of point  
PY                Y coordinate of point

**DRAW3D(PX,PY,PZ)**

"Draw 3-D (vector)"

**Purpose**

Draws a vector in the 3-D world coordinate system from the current cursor location to a specified point

**Inputs**

PX                X coordinate of point  
PY                Y coordinate of point  
PZ                Z coordinate of point

**DRGSEG(ISEG)**

"Drag (a) segment"

**Purpose**

Specifies which segment is to be moved on the screen by the current GIN device

**Inputs**

ISEG             1 to 32767      Identification number of the segment to be moved

**Errors**

14451            Segment ISEG out of range (1 to 32767); no-op  
14461            Segment ISEG does not exist; no-op  
14471            Device does not support segment dragging; no-op

**DWNFNT(IFNT,IDVFNT)**

"Download (a) Font"

**Purpose**

Downloads an IGL font from the host computer to a device

**Inputs**

IFNT             Number of the IGL font to be downloaded to the device  
IDVFNT          Number of the device font to be associated with the downloaded font

**Errors**

14051            IGL S/W font out of range (0,MAX-NUM-OF-FONTS); no-op  
14052            Downloaded font out of range for current device; no-op  
14071            Graphics Text Emulation (Option 3D) option not present; no-op  
14072            Segment is open, cannot download a font no-op  
14073            Device does not support downloaded characters; no-op  
14074            Cannot download with active billboard; no-op

**EDGE(PXMIN,PXMAX,PYMIN,PYMAX)**

"Edge (of clipped area)"

**Purpose**

Allows the clipping edge to be defined independently of the 2-D viewport

**Inputs**

PXMIN	Minimum X coordinate of clipping edge
PXMAX	Maximum X coordinate of clipping edge
PYMIN	Minimum Y coordinate of clipping edge
PYMAX	Maximum Y coordinate of clipping edge

**Errors**

05221	Minimum coordinate greater than or equal to the corresponding maximum coordinate; no-op
05222	Illegal to modify viewing environment while retained segment is open; no-op
05223	The edge must equal the viewport boundary with local viewport; no-op

**EDGE3D(PUMIN,PUMAX,PVMIN,PVMAX)**

"(Clipping) edge (for) 3-D"

**Purpose**

Allows the 3-D clipping edge to be defined independently of the 3-D window

**Inputs**

PUMIN	Minimum U coordinate of clipping edge
PUMAX	Maximum U coordinate of clipping edge
PVMIN	Minimum V coordinate of clipping edge
PVMAX	Maximum V coordinate of clipping edge

**Errors**

09921	Maximum coordinate < corresponding minimum coordinate; no-op
09931	Illegal to modify viewing with retained segment open; no-op

**END1X(IBUF,QSEND)**

"End (a 4110 series terminal) command"

**Purpose**

Terminates the construction of a 4110 command

**Inputs**

IBUF	The terminal command buffer
QSEND	If .TRUE. the command is sent to the terminal immediately If .FALSE. several commands are sent to the device together

**Errors**

11251	Terminal command buffer improperly formed; no-op
-------	--

**END63(IBUF,QSEND)**

"End (a) 4663 (Plotter command)"

**Purpose**

Terminates the construction of a 4663 plotter command

**Inputs**

IBUF	The plotter command buffer
QSEND	.TRUE. means send buffer now

**Errors**

20271	Invalid pointer in IBUF; no-op
-------	--------------------------------

**ENDPNT(PX,PY)**

"Ending point (for line smoothing)"

**Purpose**

Specifies a pseudo-ending point for calculation of a smoothed line

**Inputs**

PX	X coordinate of pseudo-ending point
PY	Y coordinate of pseudo-ending point

**ENDSLP(PDX,PDY)**

"Ending slope (for line smoothing)"

**Purpose**

Specifies ending slope for a smoothed line

**Inputs**

PDX	The change in X, to determine the ending slope of the line
PDY	The change in Y, to determine the ending slope of the line

**EPROC**

"End procedure (definition)"

**Purpose**

Ends a downloadable procedure definition

**Errors**

21371	Downloadable procedures not present on device; no-op
21372	Downloadable procedure definition not begun; no-op

**EYEBAL(PDX,PDY,PDZ)**

"Eyeball (position)"

**Purpose**

Specifies the displacement of the eye position from the view reference point

**Inputs**

PDX X displacement of the EYEBAL, relative to the VRP

PDY Y displacement of the EYEBAL, relative to the VRP

PDZ Z displacement of the EYEBAL, relative to the VRP

**Errors**

06001 EYEBAL position corresponds with the VRP; no-op

06021 Illegal to modify viewing environment with retained segment open; no-op

**FATLIN(ICNT,PX,PY,IN,PD,ITYPE)**

"Fat Line"

**Purpose**

Draws wider than normal lines by drawing closely spaced vectors

**Inputs**

ICNT Number of points

PX X points

PY Y points

IN Number of additional vectors to be drawn close to the vector defining the character

PD Distance between vectors, always specified in world units regardless of device surface units

ITYPE Type of line

1 Hot Dog fat lines

2 Calligraphic lines

**FBCP3D(PFDST,PBDST)**

"Front (and) back clipping plane 3-D"

**Purpose**

Specifies the location of the front and back clipping planes along the view plane normal relative to the view reference point

**Inputs**

PFDST Distance from VRP to front clipping plane (default is -100.0)

PBDST Distance from VRP to back clipping plane (default is 0.0)

**Errors**

05721 Illegal to modify viewing with retained segment open; no-op

05722 PFDST > PBDST; no-op

**FILPAN(IPATNO,QOUTLN)**

"Fill panel"

**Purpose**

Specifies way in which panels are filled

**Inputs**

IPATNO Number of pattern used to fill panel. See PATTERN, Figure 4, and Table 7, Panel Fill Patterns

QOUTLN

.TRUE. Outlines panel in current vector color; this is the default

.FALSE. Does not outline panel

**Table 7****PANEL FILL PATTERNS**

Device	Valid Range
4027	0 thru 127
4112	-8 thru 32767
4113	-16 thru 32767
emulated	0 thru 24

**FIXUP(ILEVEL)**

"Fixup (the display information)"

**Purpose**

Specifies when a 4112 or 4113 terminal updates the display

**Inputs**

ILEVEL	An integer fixup level
1	No action until new page
2	Additions mode, no deletions until new page
3	Additions mode, deletions mode, ghost images until new page
4	All actions updated immediately

**Errors**

16951	Fixup level is out of range for current device; no-op
16971	Current device does not support multiple fixup levels; no-op

**Note**

Requires a device that supports multiple fixup levels

**GCHR1X(IBUF,ICHAR)**

"(Decode a) character"

**Purpose**

Converts a 4110 series character report into current user text format

**Inputs**

IBUF(1)	A buffer which contains the character (in ADE) returned from the terminal.
---------	--

**Outputs**

ICHR	Character in current user text format
------	---------------------------------------

**GDUNIT**

"Graphics display units"

**Purpose**

Specifies that display surface values in subsequent routines are graphics display units (GDUs) (see Table 8); this is the default

**GETPIK(IDSEG,IDPIK)**

"Get (coordinates to) pick (a segment)"

**Purpose**

Returns the integer names of a retained segment and a graphic primitive selected with a graphic input (GIN) device

**Outputs**

IDSEG	The integer name of the picked segment
IDPIK	The integer name ("pick ID") of a primitive within the segment

**Errors**

01821	No segments pickable, return IDSEG(0) IDPIK(0)
01822	Wrong number of values returned from device; no-op
01823	Type 3 segments not supported; no-op

**Table 8****DISPLAY SURFACE SIZES OF TEKTRONIX DEVICES**

Device	X by Y Display Area Device			
	MILLIM	INCHES	RASTER	GDUNIT
4006/10	193.5x147.6	7.62x5.81	1023x780	131.2x100.0
4012/13/51	193.5x147.6	7.62x5.81	1023x780	131.2x100.0
4014/15	362.9x276.7	14.28x10.89	1023x780	131.2x100.0
4014/15 (w/EGM)	362.9x276.7	14.28x10.89	4096x3120	131.2x100.0
4016	440.5x335.9	17.34x13.91	4096x3120	131.2x100.0
4025 (4025A)	228.8x150.0	9.01x5.91	639x419	152.5x100.0
4027 (4027A)	244.0x160.0	9.61x6.30	639x419	152.5x100.0
4112	266.7x200.0025	10.5x7.875	4096x2709	151.16x100.0
4113	357.1x267.66	14.06x10.54	4096x2709	151.16x100.0
4114	346.6x264.1	13.64x10.40	4096x3120	131.25x100.0

**GETPXL(ICNT,IPIXRY,IENCOD,QEOF,IGOT)**

"Get (a run of) pixels"

**Purpose**

Returns pixel index values from a host computer pixel data file

**Inputs**

ICNT Dimension of IPIXRY

**Outputs**

IPIXRY Array of pixels returned from file as integers

**IENCOD**

- 1 Unencoded (each integer: one pixel index value)
- 2 Runlength (each integer pair: number-of-pixels, index-value-of-pixels)

QEOF Flag indicating an END-OF-FILE on the last read

IGOT The number of integers returned in IPIXRY

**Errors**

- 17151 ICNT is less than or equal to 0; no-op
- 17171 Header not processed correctly; no-op
- 17172 Internal consistency error detected on file; no-op
- 17173 No comma between length, val pair; abort
- 17174 End of file encountered with no EOF opcode; no-op
- 17175 Hex character improperly formatted; abort

**GETUI(INLEN,IPRRAY,ITOGOT,INARRY,IGOT)**

"Get user integer"

**Purpose**

Gets integer data entered from the keyboard and enters it into the program

**Inputs**

ILENP Number of characters used in a prompting string

IPRRAY(ILENP) Array containing prompting string

ITOGOT Maximum number of integers the program expects

**Outputs**

INARRY(ITOGOT) Array returning the integers input from the keyboard

IGOT Number of integers entered from the keyboard

**Errors**

- 02521 Entry larger in magnitude than global variable NMXINT; set to NMXINT
- 02522 ITOGOT > 25; first 25 characters entered

**Note**

Terminate input prematurely by pressing "X" after the last entry

**GETURN(ILENP,IPRRAY,ITOGOT,PINRAY,IGOT)**

"Get user real number"

**Purpose**

Captures real number data entered from the keyboard and enters it into the program

**Inputs**

ILENP Number of characters used in a prompting string

IPRRAY(ILENP) Array containing prompting string

ITOGOT Maximum number of real numbers the program expects

**Outputs**

PINRAY(ITOGOT) Array containing the real numbers entered

IGOT The number of numbers entered

**Errors**

- 02421 ILENP > 80; first 80 characters entered
- 02422 A previously uncleared error was detected; no action taken

**Note**

Terminate input prematurely by pressing "X" after the last entry

**GETUTX(ILENP,IPRRAY,ITOGET,INARY,IGOT)**

"Get user text"

**Purpose**

Captures alphanumeric keyboard response and enters it into the program

**Inputs**

ILENP            Number of text characters used in a prompting string

IPRRAY(ILENP)   Array containing prompting string

ITOGET           The maximum number of characters the program expects to receive

**Outputs**

INARY(ITOGET)   Array returning information entered; translated from literal string into current text format

IGOT             The number of characters entered

**Errors**

02301            ILENP > 80; first 80 characters entered

02303            ITOGET out of range [1,80]; no-op

02311            ILENP < 0; no-op

**GINT1X(IBUF,IVAL)**

"(Decode an) integer"

**Purpose**

Converts a 4110 series integer report into an integer on the host

**Inputs**

IBUF(3)           A buffer that contains the characters (in ADE) returned from the terminal. Three characters are required

**Outputs**

IVAL             An integer returned from the terminal

**Errors**

13051            Report not in valid integer-report format; no-op

**GINT63(IARY,ISIZE,I1WORD,I2WORD)**

"Convert seven ADE values to two integer values"

**Purpose**

Converts a block of seven ADE characters into two integer values

**Inputs**

IARY             The array containing the ADE values to be converted

ISIZE            The number of values in the array

**Outputs**

I1WORD           The integer calculated from ADE values 1,3,5, and 7

I2WORD           The integer calculated from ADE values 2,4,6, and 7

**Errors**

21051            ISIZE too small: must be dimensioned to a minimum of 7; no-op

**GRADS**

"Gradians"

**Purpose**

Declares that angles are specified in gradians (400 to a circle)

**GRAIN(PGRAIN)**

"Granularity (roundness)"

**Purpose**

Specifies the granularity (roundness) of an arc

**Inputs**

PGRAIN           A value from 0.0 to 1.0 indicating the granularity of a curved line, where 0.0 is the smoothest curve and 1.0 is a rough approximation; 0.5 is the default.

**Errors**

11601            PGRAIN out of range [0.0,1.0]; this is not ignored and may be used to exceed normal granularity limits

**GRL1X(IBUF,PVAL)**

“(Decode a) real number”

**Purpose**

Converts a 4110 series real number report into a real number on the host

**Inputs**

IBUF(6) A buffer that contains the characters (in ADE) returned from the terminal. Six characters are required

**Outputs**

PVAL A real number returned from the terminal

**Errors**

12951 Report not in valid real number report format; no-op

**GRSTOP**

“(Graphics stop)”

**Purpose**

Terminates IGL

**GRSTRT(IDEVIC,IOPT)**

“(Graphics start)”

**Purpose**

Initializes IGL, directs output to a specified device (see Table 9)

**Inputs**

IDEVIC Device on which output is to be displayed, usually the 4-digit Tektronix product number

IOPT The device option code; further defines device by indicating its options

**Table 9**  
**GRSTRT DEVICE/OPTION COMBINATIONS**

Device, Option (IDEVIC,IOPT)	Device and Features Supported
4006,1	Standard 4006 and 4010
4010,1	4010 with GIN mode
4012,1	Standard 4012
4012,2	4012 with small character option
4013,1	Standard 4013
4013,2	4013 with small character option
4014,1	Standard 4014
4014,2	4014 with EGM
4015,1	4015 with EGM
4015,2	4015 with 4014-compatible characters
4016,1	Standard 4016
4016,2	4016 with 4014-compatible characters
4025,1	Standard 4025
4025,5	4025 with 4010-style protocol
4025,9	4025 with GIN mode
4025,13	4025 with 4010-style protocol and GIN mode
[4025A]	(Use the 4025 device and option combinations)
4027,1	Standard 4027
4027,5	4025 with 4010-style protocol
[4027A]	(Use the 4027 device and option combinations)
4051,1	4051 or 4052 emulating a 4012
4054,1	4054 emulating a 4014
4112,1	4112 with any feature configuration
4113,1	4113 with any feature configuration
4114,1	4114 with any feature configuration
4662,1	Standard 4662
4662,5	4662 plotter with Option 31 (multiple-pen)
4663,1	4663 block mode with 12 bit resolution
4663,5	4663 block mode with 16 bit resolution
4663,9	4663 continuous mode with 12 bit resolution
4663,13	4663 continuous mode with 16 bit resolution
0,1	Non-graphic terminal (e.g. 4024)
0,2	Capture/replay only

**GXY1X(IBUF,PX,PY)**

“(Decode an) X,Y pair”

**Purpose**

Converts a 4110 series X,Y coordinate report into two real numbers on the host representing the coordinate pairs in GDUs

**Inputs**

IBUF(5) A buffer that contains the characters (in ADE) returned from the terminal. Five characters are required

**Outputs**

PX,PY The X and Y coordinates in GDUs

**Errors**

12851 Characters in data not in ADE range (32,63); no-op

**HDCOPY**

“(Make a) hard copy”

**Purpose**

Activates an attached hard copy unit and copies the screen

**HFCLOS(ICHN,QDELET)**

“Host file close”

**Purpose**

Closes a host file communications channel

**Inputs**

ICHN Channel to be closed (1-8)  
 QDELET .TRUE. deletes the file accessed by ICHN  
 .FALSE. saves the file accessed by ICHN

**Errors**

20601 Channel (ICHN) number out of range (1,8); no-op  
 20621 Channel not open; no-op

**HFENQ(ICHN,IARRAY)**

“Host file enquire”

**Purpose**

Provides information concerning the status of a specified channel

**Inputs**

ICHN Channel for which information is requested (1-8)

**Outputs**

IARRAY(12) Channel status information for the requested channel

**Errors**

20701 Channel number (ICHN) out of range (1,8); no-op

**HFOPEN(ICHN,IFNAM,IFFMT,IFILSZ,IRECSZ)**

"Host file open"

**Purpose**

Opens a specified host file communications channel

**Inputs**

ICHN Channel number (1-8)  
 IFNAM(6) File name, given in current text format  
 IFFMT An integer (1-6) specifying the format of the file to be opened and whether a READ or WRITE is to be performed on the file

- 1 Read from a sequential text file (followed by calls to HFREAD)
- 2 Write to a sequential text file (followed by calls to HFWRIT)
- 3 Read from a sequential real number file (followed by calls to HFSQR)
- 4 Write to a sequential real number file (followed by calls to HFSQW)
- 5 Read from or write to a random access real number file (followed by calls to HFRNR, HFRNW, or both)
- 6 Read only from a random access real number file (followed by calls to HFRNR)

IFILSZ File size in records (lines) for formats 5 and 6; ignored for formats 1 through 4. This argument should reflect the total number of records to be written to a file, or highest numbered record to be read from the file

IRECSZ Real numbers per record for formats 5 and 6, up to a maximum of 20; ignored for formats 1 through 4

**Errors**

- 20501 Channel number out of range (1,8); no-op
- 20503 File format out of range; no-op
- 20504 Non-positive file length requested; no-op
- 20505 Non-positive record size requested; no-op
- 20521 File already open; no-op

**HFREAD(ICHN,ICNT,IARRAY,QEOF)**

"Host file read"

**Purpose**

Reads a text record from a sequential text file

**Inputs**

ICHN Channel on which record is to be read (1-8)  
 ICNT Number of characters to be read (0-80)

**Outputs**

IARRAY(80) Receives the characters in current text format (ADE, A1, or AM)  
 QEOF Returns .TRUE. when the end of file is reached

**Errors**

- 21001 Channel number out of range (1,8); no-op
- 21002 Character count out of range (1,80); no-op
- 21021 Communications channel (ICHN) not open; no-op
- 21022 File format argument in HFOPEN not set to 1; no-op
- 21023 End of file, nothing left to read; no-op

**HFRNR(ICHN,IRECNO,PARRAY)**

"Host file random (real number) read"

**Purpose**

Reads a record from a random access, real number file

**Inputs**

ICHN Channel on which record is to be read (1-8)  
 IRECNO Record number to read

**Outputs**

PARRAY(20) Real number data read from file specified by ICHN. Must be dimensioned to a maximum value of 20

**Errors**

- 21401 Channel number out of range (1,8); no-op
- 21402 Record number (IRECNO) out of user-defined range; no-op
- 21421 Communications channel (ICHN) not open; no-op
- 21422 File format argument in HFOPEN not set to 5 or 6; no-op

**HFRNW(ICHN,IRECNO,PARRAY)**

"Host file random (real number) write"

**Purpose**

Writes a record to a random access real number file

**Inputs**

ICHN Channel on which record is to be written (1-8)

IRECNO Number of the record to be written

PARRAY(20) Real number data to write via the channel specified by ICHN. Must be dimensioned to a maximum value of 20

**Errors**

21501 Channel number out of range (1,8); no-op

21502 Record number (IRECNO) out of user-defined range; no-op

21521 File not open to be written into; no-op

21522 File format argument in HFOPEN not set to 5; no-op

**HFSQR(ICHN,ICNT,PARRAY,QEOF)**

"Host file sequential real read"

**Purpose**

Reads a record from a sequential format file of real numbers

**Inputs**

ICHN Channel to be read from (1-8)

ICNT Number of real numbers to read (0-20)

**Outputs**

PARRAY(20) Array to which the real numbers are read

QEOF Set to .TRUE. if end of file is encountered

**Errors**

21201 Communications channel (ICHN) number out of range (1,8); no-op

21202 Number of real numbers (ICNT) out of range (0,20); no-op

21221 Communications channel (ICHN) not open; no-op

21222 File format argument in HFOPEN not set to 3; no-op

21223 End of file, nothing left to read; no-op

**HFSQW(ICHN,ICNT,PARRAY)**

"Host file sequential (real number) write"

**Purpose**

Writes a record to a sequential real number file

**Inputs**

ICHN Channel to be written to (1,8)

ICNT Number of reals to be written (1,20)

PARRAY(20) Array of real numbers to be written

**Errors**

21301 Channel number (ICHN) out of range (1,8); no-op

21302 Number of real numbers (ICNT) < 0; no-op

21321 Specified file not open; no-op

21322 File format argument in HFOPEN not set to 4; no-op

**HFWRIT(ICHN,ICNT,IARRAY)**

"Host file write"

**Purpose**

Writes a record to a sequential text format file

**Inputs**

ICHN Channel to be written to (1,8)

ICNT Number of characters to be written

IARRAY(80) Array of characters to be written; specified in current text format

**Errors**

21101 Communications channel (ICHN) number out of range (1,8); no-op

21102 Number of characters (ICNT) out of range (1,80); no-op

21121 Specified file not open; no-op

21122 File format argument in HFOPEN not set to 2; no-op

**HOME**

"(Return to) home (position)"

**Purpose**

Moves the cursor to a location one character position down from the upper left corner of the viewport

**HSTCPY(IDIRCT, IORGLN, IORGFL, IDESLN, IDESFL)**  
"Host (computer file) copy"

**Purpose**

Transfers files from the host mass storage device to a terminal flexible disk or vice versa

**Inputs**

IDIRCT	Direction of file transfer
0	From host to flexible disk
1	From flexible disk to host
IORGLN	Number of characters in the source file name
IORGFL	Source file name in current text format
IDESLN	Number of characters in the destination file name
IDESFL	Destination file name in current text format

**Errors**

18451	Invalid file direction requested; no-op
18471	Block mode communications is not installed; no-op
18472	Local storage unit not available on device; no-op
18473	Origin name too long, truncated to 9 chars; report
18474	Origin specifier too long, truncated to 6 chars; report
18475	Destin name too long, truncated to 9 chars; report
18476	Destin specifier too long, truncated to 6 chars; report
18477	No communication channels available; no-op

**Note**

This routine requires block mode communication with the host computer. Check with a system programmer to find out whether your IGL library allows block mode I/O.

**I2BIN(IWORD, ISIZE, IARRAY)**

"Convert integer to binary"

**Purpose**

Converts an integer value into a bit string representative of size determined by ISIZE

**Inputs**

IWORD	The integer value to be converted
ISIZE	The number of bits into which the integer is converted (the dimension of IARRAY)

**Outputs**

IARRAY	The array containing the bit string representation
--------	--

**Errors**

21751	IWORD out of range (-32767,32767); no-op
21752	ISIZE out of range (1,16); no-op

**IERRNM(QCLEAR)**

"Integer error number"

**Purpose**

Returns the routine number where the last error was encountered

**Inputs**

QCLEAR	Set to .TRUE. if NERROR, the global variable containing the error number, is to be cleared Set to .FALSE. if NERROR is not to be cleared
--------	---

**Outputs**

IERRNM	The global variable NERROR is returned in the specified variable name
--------	---

**INCHES**

"Inches"

**Purpose**

Specifies that display surface values in subsequent routines are inches (see Table 8)

**INIFIL (IFNAM,IFILSZ,IMXFNT)**

"Initialize file"

**Purpose**

Initializes a host file so that it is in the proper format to contain one or more fonts

**Inputs**

IFNAM Name of the file to contain the fonts; specified in current text format (ADE, A1, or AM)

IFILSZ File size; specified in terms of 20-word records

IMXFNT Maximum font number to be contained in the file; first font number is 0, maximum allowable value is installation dependent

**Errors**

17621 No host file communication channels available; no-op

**INIFNT**

"Initialize (default) font"

**Purpose**

Initializes default software font

**INQ2PV (ISEG,PX,PY)**

"Inquire (segment type 1 or) 2 pivot point"

**Purpose**

Returns the pivot point of a type 1 or 2 segment or the X and Y pivot point coordinates of a type 3 segment

**Inputs**

ISEG -2 Default  
1-32767 A specific type 1 or 2 segment

**Outputs**

PX,PY Pivot point in NDCs; default is (0.0,0.0)

**Errors**

03951 Segment ISEG is not an existing retained segment; no-op

03971 Parameter ISEG out of range; no-op

**INQ2TN (ISEG,PSX,PSY,PANG,PTX,PTY)**

"Inquire (type) 2 (segment image transform parameters)"

**Purpose**

Returns the 2-D image transform parameters of a type 2 or 3 segment

**Inputs**

ISEG -2 Default  
1-32767 A specific type 1 or 2 segment

**Outputs**

PSX,PSY Scale factors applied to the X- and Y-axes respectively

PANG Angle of rotation, measured in current angle units in a counterclockwise direction on the display surface

PTX,PTY X and Y NDC coordinates or the point to which the segment pivot point is moved prior to drawing the segment

**Errors**

03751 Segment ISEG is not an existing retained segment; no-op

03771 Parameter ISEG out of range; no-op

03781 The seg's type is not compatible with current req.; no-op

**Note**

Requires installation of 3-D Graphics Support (Option 4B)

**INQ3PV (ISEG,PX,PY,PZ)**

"Inquire (segment type) 3 pivot point"

**Purpose**

Returns the pivot point of a type 3 segment

**Inputs**

ISEG -2 Default  
1-32767 A specific type 3 segment

**Outputs**

PX,PY,PZ Pivot point in NDCs; default is (0.0,0.0,0.0)

**Errors**

04051 Segment ISEG is not an existing retained segment; no-op

04071 Parameter ISEG out of range; no-op

04072 3-D support not available; no-op

04081 The seg's type is not compatible with current req.; no-op

### INQ3TN(ISEG,PSX,PSY,PSZ,PAX,PAY,PAZ,PTX,PTY,PTZ)

"Inquire (type) 3 (segment image transform)"

#### Purpose

Returns the image transform parameters of a type 3 segment

#### Inputs

ISEG  
-2 Current default image transform values  
1-32767 A specific type 3 segment

#### Outputs

PSX,PSY,PSZ Scale factors applied to the X-, Y-, and Z-axes respectively  
PAX,PAY,PAZ Angle of rotation, expressed in current angle units (rotation around an axis is positive if, when looking down the axis toward the NDC origin, the rotation appears to be clockwise)  
PTX,PTY,PTZ NDC coordinates of the point to which the segment pivot point is moved prior to drawing the segment

#### Errors

03851 Segment ISEG is not an existing retained segment; no-op  
03871 Parameter ISEG out of range; no-op  
03872 3-D support not available; no-op  
03881 The seg's type is not compatible with current req.; no-op

#### Note

Requires installation of 3-D Graphics Support (Option 4B)

### INQAPT(PVAL)

"Inquire aperture (size)"

#### Purpose

Returns the pick aperture size

#### Outputs

PVAL Length (in current display surface units) of a side of the square pick aperture

### INQBTM(IVAL)

"Inquire segment batch mode (setting)"

#### Purpose

Returns value indicating the current batch mode

#### Outputs

IVAL  
2 Indicates that all changes with visible effects on retained segments (including deletions, changes to dynamic attributes, and graphic and text output) are deferred by BATCH; changes to nonretained segments are not deferred  
3 Indicates that only changes which cause a new page action (a terminal to erase the screen and redraw or a plotter to advance the paper or prompt user to change the paper) are deferred by BATCH  
4 Indicates that BATCH defers nothing

### INQCLS(ISEG,INUM,IARRAY,IGOT)

"Inquire (segment classes)"

#### Purpose

Returns the integer names of the classes to which a segment belongs

#### Inputs

ISEG The segment whose class membership is to be returned  
INUM The length of array IARRAY (number of names expected)

#### Outputs

IARRAY The list of the classes to which ISEG belongs  
IGOT The number of classes to which ISEG belongs

#### Errors

04551 Retained segment ISEG does not exist; no-op  
04552 INUM .LT. no. of classes (fill to INUM; IGOT= ACTUAL)  
04561 ISEG out of range ((-2),(1-32767)); no-op

**INQCRV(ICURVW)**

"Inquire (about the) current view"

**Purpose**

Returns the number of the current (active) view

**Outputs**

ICURVW      The current (active) view

**Errors**

18971      Current device does not support multiple local view; no-op

**INQCUR(ISEG)**

"Inquire (about the) cursor"

**Purpose**

Returns the name of the GIN cursor

**Outputs**ISEG  
0      The crosshair cursor (default)  
1-32767      A retained segment acting as the cursor**Errors**

14771      Current device does not support user-defined cursors; no-op

**INQDET(ISEG,QVAL)**

"Inquire (segment) detectability (attribute)"

**Purpose**

Returns detectability attribute of specified retained segment

**Inputs**ISEG  
-2      Default  
1-32767      A specific retained segment**Outputs**QVAL  
.TRUE.      Indicates that the segment is detectable  
.FALSE.      Indicates that the segment is not detectable; default**Errors**04351      Retained segment ISEG does not exist; no-op  
04361      ISEG out of range ((-2),(1-32767)); no-op**INQDM(ISEG,IMODE)**

"Inquire (about the) display mode"

**Purpose**

Returns the display mode of a given segment

**Inputs**ISEG  
-2      The default segment display mode  
1-32767      The number of a particular retained segment**Output**IMODE      Display mode of the specified segment  
For the 4114:  
1 Storage mode  
2 Refresh mode  
For the 4112 and 4113:  
1 Set mode  
2 XOR mode**Errors**14351      Segment ISEG does not exist; no-op  
14352      Display mode received from device is invalid; no-op  
14361      Segment number is invalid; no-op  
14371      Device does not support multiple seg display modes; no-op**INQFML(PDIST)**

"Inquire (plotter) form length"

**Purpose**

Reads the current form length in display surface units

**Outputs**

PDIST      Form length in current display surface units

**Errors**

22371      Media advance option not present on current device; no-op

**Note**

Requires device with media advance capability

**INQGIN(IDEV)**

"Inquire (about) GIN (status)"

**Purpose**

Inquires about which device is being used as the graphic input (GIN) device

**Outputs**

IDEV	Current GIN device:
0	No GIN device available
1	The thumbwheels (the default GIN device)
2	Optional data tablet
3	A plotter on port 0 of 3PPI
4	A plotter on port 1 of 3PPI
5	A plotter on port 2 of 3PPI

**INQGRD(PXGRID,PYGRID)**

"Inquire (about) gridding"

**Purpose**

Returns the current X and Y grid spacing for graphic input

**Outputs**

PXGRID	X grid spacing in world space units
PYGRID	Y grid spacing in world space units

**Errors**

10171	Device does not support input gridding; no-op
-------	---

**Note**

Requires a device capable of input gridding

**INQHIL(ISEG,QVAL)**

"Inquire (about segment) highlight (attribute)"

**Purpose**

Returns highlight attribute of specified retained segment

**Inputs**

ISEG	
-2	Default
1-32767	A specific retained segment

**Outputs**

QVAL	
.TRUE.	Indicates that the segment is highlighted
.FALSE.	Indicates that the segment is not highlighted; default

**Errors**

04251	Retained segment ISEG does not exist; no-op
04261	ISEG out of range ((-2),(1-32767)); no-op

**INQINK(INK)**

"Inquire (about) inking"

**Purpose**

Inquires whether inking is invoked for subsequent GIN operations

**Outputs**

INK	
0	Ink for subsequent GIN operations
1	Do not ink for subsequent GIN operations; (default: 1)

**Errors**

10371	Device does not support inking features; no-op
-------	--

**Note**

Requires a device capable of inking

**INQMCL(IMNUM,IMRAY,IMGOT,INMNUM,INMRAY,INMGOT)**

"Inquire (about the) match class (matching criteria)"

**Purpose**

Returns the criteria by which match class membership is determined

**Inputs**

IMNUM	The length of the array IMRAY
INMNUM	The length of the array INMRAY

**Outputs**

IMRAY	An integer array containing the names of classes to which a segment must belong to be a member of the match class
IMGOT	The number of classes to which a segment must belong to be a member of the match class
INMRAY	An integer array containing the names of classes to which a segment must not belong if it is to be included in the match class
INMGOT	The number of classes to which a segment must not belong if it is to be included in the match class

**Errors**

04651	IMNUM .LT. # of mat classes (fill to INMNUM; IMGOT = ACTUAL)
04654	INMNUM .LT. # of mat classes (fill to INMNUM; INMGOT = ACTUAL)

**INQNMS(ISEG,INUM,IARRAY,IGOT)**

"Inquire (about segment) names"

**Purpose**

Returns the names of retained segments

**Inputs**

ISEG	
-1	All retained segments
1-32767	The name of a retained segment
INUM	Length of array IARRAY (number of names expected)

**Outputs**

IARRAY	List of retained segments
IGOT	The number of retained segments

**Errors**

04751	Illegal segment value; no-op
04752	INUM LT. # of defined segs requested (fill to INUM; IGOT= ACTUAL)

**INQPBM(IXPOS,IYPOS)**

"Inquire (about the) pixel beam (position)"

**Purpose**

Returns the position of the pixel beam in pixel space relative to the current pixel viewport

**Outputs**

IXPOS	X position of the pixel beam relative to the lower-left corner of the pixel viewport
IYPOS	Y position of the pixel beam relative to the lower-left corner of the pixel viewport

**Errors**

19071	Current device does not support pixel access; no-op
-------	---

**Note**

Requires a device capable of pixel access

**INQPID(ID)**

"Inquire current pick ID"

**Purpose**

Returns the last pick ID specified

**Outputs**

ID	
0	Indicates that the subsequent primitives will not be pickable
1-32767	The pick ID associated with primitives in the currently open segment

**INQPNL(IOVR,IFBRDY,ISYNCH)**

"Inquire (about the) panel (environment values)"

**Purpose**

Returns the current values that specify how a panel is filled

**Outputs**

IOVR	Overstrike or replace mode value:
0	Replace
1	Overstrike
IFBRDY	Fill-over-boundary value:
0	No
1	Yes
ISYNCH	Determines how the fill pattern is to be oriented on the screen
0	The pattern is synchronized with the viewport
1	The pattern is synchronized with the lower left panel edge
2	The pattern is synchronized with the whole screen

**Errors**

15071	Current device does not support pixel access; no-op
-------	---

**Note**

Requires a device capable of pixel access

**INQPRI(ISEG,IPRTY)**

"Inquire (segment display) priority"

**Purpose**

Returns display priority of a specified retained segment

**Inputs**

ISEG	
-2	Default
1-32767	Integer name of a specific segment

**Outputs**

IPRTY	An integer from 0 to 32767 denoting display priority of the segment
-------	---

**Errors**

04451	Retained segment ISEG does not exist; no-op
04461	ISEG out of range ((-2),(1-32767)); no-op

**INQPVW(IXMIN,IXMAX,IYMIN,IYMAX)**

"Inquire (about the) pixel viewport (dimensions)"

**Purpose**

Returns the current values that specify the size and position of the pixel viewport in raster memory space units (X= 0 to 479, Y= 0 to 639)

**Inputs**

IXMIN Current minimum X value of the pixel viewport  
 IXMAX Current maximum X value of the pixel viewport  
 IYMIN Current minimum Y value of the pixel viewport  
 IYMAX Current maximum Y value of the pixel viewport

**Errors**

17671 Device does not support pixel access; no-op

**INQPXL(ISRFNM,IALU)**

"Inquire (about the) pixel (image environment)"

**Purpose**

Returns the current values that specify the surface that the pixel viewport is on and the ALU mode of the pixels in that image

**Outputs**

ISRFNM Specifies which surface the pixel viewport is on  
 IALU Specifies which of 16 ALU modes is currently set

**Errors**

18771 Current device does not support pixel access; no-op

**Note**

Requires a device capable of pixel access

**INQRUB(IRUBND)**

"Inquire (about) rubberbanding"

**Purpose**

Inquires whether rubberbanding is enabled for subsequent GIN operations

**Outputs**

IRUBND  
 0 Rubberbanding is disabled for subsequent GIN functions (default)  
 1 Rubberbanding is enabled for subsequent GIN functions

**Errors**

10871 Device does not support rubberbanding; no-op

**Note**

Requires a device capable of rubberbanding

**INQSRF(ISRFNM,IPLAN,ISVIS,ISPRIO)**

"Inquire (about) surface (attributes)"

**Purpose**

Returns attributes of the specified surface

**Inputs**

ISRFNM Surface number to inquire about

**Outputs**

IPLAN The number of bit planes assigned to the specified surface  
 ISVIS Surface visibility  
 0 Invisible  
 1 Visible  
 2 Blinking  
 ISPRIO Display priority of the surface

**Errors**

16551 Surface number is out of range for the current device; no-op  
 16571 Device not capable of multiple surfaces; no-op

**Note**

Requires a device capable of multiple surfaces

## INQSTR(QSTR,ITIME,PDIST)

"Inquire (about) stroking"

### Purpose

Returns the stroke filtering parameters for subsequent tablet LOCATE operations

### Outputs

QSTR            Stroke parameters for subsequent locates:  
          .TRUE.        Stroke input enabled with the specified time and distance filtering  
          .FALSE.      Stroke input disabled  
ITIME           The value (in milliseconds) to be used for stroke time filtering; zero denotes no time filtering  
PDIST           The value (in world space) to be used for stroke distance filtering; zero denotes no distance filtering

### Errors

10571           Device does not support stroke input; no-op

## INQTRN(ISEG,PX,PY)

"Inquire translation coordinates"

### Purpose

Returns the 2-D translation coordinates of a type 1, 2, or 3 segment

### Inputs

ISEG  
  -2            Default  
  1-32767      Integer name of a specific segment

### Outputs

PX,PY          The translation coordinates of ISEG; default is (0.0,0.0)

### Errors

03651          Retained segment ISEG does not exist; no-op  
03661          ISEG out of range ((-2),(1-32767)); no-op

## INQTYP(ISEG,ITYPE)

"Inquire segment type"

### Purpose

Returns segment type specifications

### Inputs

ISEG  
  -2            Default  
  1-32767      Integer name of segment whose type is requested

### Outputs

ITYPE  
  0            Indicates a nonretained segment  
  1            Indicates a retained segment which can be translated in two dimensions by an image transform  
  2            Indicates a retained segment which can be scaled, rotated and translated in two dimensions by an image transform  
  3            Indicates a retained segment which can be scaled, rotated and translated in three dimensions by an image transform

### Errors

03351          Retained segment ISEG does not exist; no-op  
03361          ISEG out of range ((-2),(1-32767)); no-op

## INQVIS(ISEG,QVAL)

"Inquire (segment) visibility (attribute)"

### Purpose

Returns visibility attribute of specified retained segment

### Inputs

ISEG  
  -2            Default  
  1-32767      Integer name of a specific segment

### Outputs

QVAL  
  .TRUE.        Indicates that the segment is visible: default  
  .FALSE.      Indicates that the segment is invisible

### Errors

03151          Retained segment ISEG does not exist; no-op  
03161          ISEG out of range ((-2),(1-32767)); no-op

**INQVW(IVWNUM,IDEFIN,ISRFNM,IBCKGD,IBORDR,PDIMEN)**

"Inquire (about a) view"

**Purpose**

Returns attributes of a specified view

**Inputs**

IVWNUM View number to inquire about

**Outputs**

IDEFIN Returns 1 if the view is defined, otherwise 0

ISRFNM Number of the surface the view occupies

IBCKGD Color index used to erase the view

IBORDR Color index of the view border

PDIMEN(4) Array of XMIN, XMAX, YMIN, YMAX of viewport in display surface units

**Errors**

16151 View number is out of range for current device; no-op

16171 No multiple view capability on device; no-op

**Note**

Requires a device capable of multiple views

**INRY1X(INCNT,IARRAY,IBUF)**

"(Encode an) integer array"

**Purpose**

Places an integer array in the terminal command buffer

**Inputs**

INCNT Number of elements in the integer array

IARRAY Name of the array containing the integers

IBUF The terminal command buffer

**Outputs**

IBUF The updated terminal command buffer

**Errors**

11951 Array length (INCNT) is negative; no-op

11952 Value in array outside terminal's range (-32767,-32767); no-op

11953 Terminal command buffer too small for data; no-op

**INT1X(IVAL,IBUF)**

"(Encode an) integer"

**Purpose**

Places an integer in the terminal command buffer

**Inputs**

IVAL The integer value to be encoded

IBUF The terminal command buffer

**Outputs**

IBUF The updated terminal command buffer

**Errors**

11351 IVAL is out of the terminal's range (-32767,32767); no-op

11352 Terminal command buffer too small for data; no-op

**INT63(IVAL,IBUF)**

"(Encode a) 4663 integer"

**Purpose**

Converts integers to ADE and put them in the plotter command buffer

**Inputs**

IVAL The integers to be converted

IBUF The plotter command buffer

**Outputs**

IBUF The updated plotter command buffer

**Errors**

20351 IVAL out of range (-32767,32767);no-op

20352 Buffer (IBUF) too small to convert integer to ADE; no-op

**INUMBR(INTVAL,IMXCHR)**

"Integer number (output)"

**Purpose**

Displays integer data as text

**Inputs**

INTVAL The integer to be displayed

IMXCHR Maximum number of characters to display

**Errors**

02201 IMXCHR < 1; no-op

02221 IMXCHR > 25; uses only first 25 characters

**KA12AS(ICNT,IA1RAY,IASRAY)**

"Convert (from) A1 to ADE"

**Purpose**

Converts character string from A1 to ADE format

**Inputs**

ICNT                    Number of characters to be converted  
IA1RAY(ICNT)        Array of characters in A1 format

**Outputs**

IASRAY(ICNT)        The resulting ADE array

**Errors**

18201                ICNT < 0; no-op

**KAM2AS(ICNT,IAMRAY,IASRAY)**

"Convert (from) AM to ADE"

**Purpose**

Converts character string from AM to ADE format

**Inputs**

ICNT                    Number of characters to be converted  
IAMRAY(ICNT)        Array of characters in AM format

**Outputs**

IASRAY                The resulting ADE array  
(ICNT)

**Errors**

18001                ICNT < 0; no-op

**KAS2A1(ICNT,IASRAY,IA1RAY)**

"Convert (from) ADE to A1"

**Purpose**

Converts character string from ADE to A1 format

**Inputs**

ICNT                    Number of characters to be converted  
IASRAY(ICNT)        Array of characters in ADE format

**Outputs**

IA1RAY(ICNT)        The resulting A1 array

**Errors**

18301                ICNT < 0; no-op

**KAS2AM(ICNT,IASRAY,IAMRAY)**

"Convert (from) ADE to AM"

**Purpose**

Converts character string from ADE to AM format

**Inputs**

ICNT                    Number of characters to be converted  
IASRAY(ICNT)        Array of characters in ADE format

**Outputs**

IAMRAY(ICNT)        The resulting AM array

**Errors**

18101                ICNT < 0; no-op

**LINCLR(ICOLOR)**

"Line color"

**Purpose**

Specifies the desired line color

**Inputs**

ICOLOR                Number of selected color

**Note**

Requires a device capable of displaying color

## LLSQ(IPNTS, IDEGP1, PXRAY, PYRAY, IWRKSZ, PCOEF, PWORK)

"Least squares (fit)"

### Purpose

Fits a curve of specified degree as close as possible to given points defining a curve

### Inputs

IPNTS            The number of points to which the polynomial is to be fit  
IDEGP1          The degree of the polynomial to be fit, plus one  
PXRAY(IPNTS)   Array containing X coordinates of the points to be fit  
PYRAY(IPNTS)   Array containing Y coordinates of the points to be fit  
IWRKSZ          The size of the supplied work array, PWORK: size should be at least (IDEGP1)\*(IDEGP1+1)

### Outputs

PCOEF(IDEGP1) Array containing the coefficients of the polynomial  
PWORK(IWRKSZ) Scratch workspace specified by user

### Errors

28605            IWRKSZ < (IDEGP1 \* (IDEGP1 + 1)); no-op  
28622            Unstable fit, usually caused by overlapping points or IDEGP1 too large; zeroes returned in PCOEF

## LOC3D(IMAXPT, PX, PY, PZ, IDAT, IGOT)

"Locate 3-D (points)"

### Purpose

Obtains digitized points from the graphics device and returns them as 3-D WCS (world coordinate system) units.

### Inputs

IMAXPT          Maximum number of points to be located

### Outputs

PX(IMAXPT)     Array containing the X coordinates of points returned in WCS units  
PY(IMAXPT)     Array containing the Y coordinates of points returned in the WCS  
PZ(IMAXPT)     Array containing the Z coordinates of points returned in the WCS  
IDAT(IMAXPT)   Character(s) used to digitize the point(s)  
IGOT             Number of points actually received

### Errors

01301            IMAXPT < 1; no-op  
01311            IMAXPT > 50; first 50 points digitized  
01321            Plane of billboard is perpendicular to screen; no-op

### Note

Requires device with GIN (graphics input) mode; actions to digitize points and/or to prematurely stop input are device-dependent

## LOCATE(IMAXPT, PXARAY, PYARAY, IDAT, IGOT)

"Locate (points)"

### Purpose

Puts the terminal into graphic input mode (GIN) and stores coordinates of points located by the graphic cursor

### Inputs

IMAXPT          Maximum number of points to be located

### Outputs

PXARAY(IMAXPT) Array containing X coordinates of points located  
PYARAY(IMAXPT) Array containing Y coordinates of points located  
IDAT(IMAXPT)   Character(s) used to digitize the point(s)  
IGOT             Number of points located

### Errors

00901            IMAXPT < 1; no-op  
00911            IMAXPT > 50; first 50 points digitized

## MAKCUR

"Make (display) current (immediately)"

### Purpose

Transmits the contents of the IGL I/O buffer, updating the display immediately

## MARGIN(PDIST)

"Margin"

### Purpose

Defines a left and right margin for use during justification and truncation of character strings; specifies the "home" position

### Inputs

PDIST Distance between left and right margins in world units; default is -1.0

### Note

Only affects environment of TYPSET routine

## MARKER(PX,PY,IMARK)

"Marker"

### Purpose

Displays a symbol at a specified point on the device surface

### Inputs

PX X coordinate of point where marker will be placed, in world coordinates

PY Y coordinate of point where marker will be placed, in world coordinates

IMARK ADE value of marker number, in current marker font; see Figures 2 and 3

### Errors

02721 Marker emulation expected but not available; no-op

■	□	○	△

2686-4

Figure 3. 4110 Series Markers.

**MATIDN(PMAT)**

"(Generate) identity matrix"

**Purpose**

Generates an identity matrix

**Outputs**

PMAT(4,4) The identity matrix

**MATMUL(IR1,ICR,IC2,PMAT1,PMAT2,PRESLT)**

"Matrix Multiplication"

**Purpose**

Multiply two matrices

**Inputs**

IR1 Number of rows in the first matrix  
ICR Number of columns in the first matrix and  
the number of rows in the second and  
resultant matrix

IC2 Number of columns in the second and  
resultant matrix

PMAT1(IR1,ICR) First matrix  
PMAT2(ICR,IC2) Second matrix

**Outputs**

PRESLT(IR1,IC2) The resultant matrix

**Errors**

17801 One of the input arguments for  
row/column is less than or equal to 0

**MILLIM**

"Millimeters"

**Purpose**

Specifies that display surface values in subsequent  
routines are millimeters (see Table 8)

**MODEL T**

"Modeling transform"

**Purpose**

Specifies that subsequent scaling, rotation, and  
translation transforms occur in world coordinate system  
as modeling transforms (default)

**MOVE(PX,PY)**

"Move (the cursor)"

**Purpose**

Moves cursor to a specified point without drawing a  
vector

**Inputs**

PX X coordinate of point to which cursor  
moves

PY Y coordinate of point to which cursor  
moves

**MOVE3D(PX,PY,PZ)**

"Move 3-D (cursor)"

**Purpose**

Moves cursor to a specified point in the 3-D world  
coordinate system without drawing a vector

**Inputs**

PX X coordinate of point to which cursor  
moves

PY Y coordinate of point to which cursor  
moves

PZ Z coordinate of point to which cursor  
moves

**MPOLAR(PDIST,PANGLE)**

"Move (in a) polar (coordinate system)"

**Purpose**

Moves to the specified polar coordinates

**Inputs**

PDIST The distance from the pivot point

PANGLE Angle component of the destination point

**MRKCLR(ICOLOR)**

"Marker color"

**Purpose**

Sets marker color

**Inputs**

ICOLOR            Number of a color; see Table 10, IGL  
Default Color Maps

**Note**

Requires device capable of displaying color

**Table 10**  
**IGL DEFAULT COLOR MAPS**

Index	4027	4112 Light- ness	4112 RGB or CMY	4113
0	white	black	black	black
1	red	21%	white	white
2	green	27%	white	red
3	blue	41%	white	green
4	yellow	57%	white	blue
5	cyan	68%	white	cyan
6	magenta	81%	white	magenta
7	black	white	white	yellow
8	n/a	white	white	red-yellow
9	n/a	white	white	green-yellow
10	n/a	white	white	green-cyan
11	n/a	white	white	blue-cyan
12	n/a	white	white	blue-magenta
13	n/a	white	white	red-magenta
14	n/a	white	white	dark gray
15	n/a	white	white	light gray
16-32677	n/a	white	white	light gray

**MRKFNT(IFONT)**

"Marker font"

**Purpose**

Selects font to be used for marker output

**Inputs**

Integer number of font

**Errors**

13101            Font number &lt; 0; no-op

**MTR3D(PTRN,QREL)**

"Matrix transform 3-D"

**Purpose**

Provides 3-D modeling capability

**Inputs**

PTRN(4,4)        The transform matrix (row, column)  
QREL

.TRUE.            Multiplies appropriate transforms by  
PTRN

.FALSE.           Replaces appropriate transforms by  
PTRN

**Errors**08801            Fourth column of matrix out of range,  
must be (0.0,0.0,0.0,1.0); no-op

08821            Singular matrix transforms; no-op

**MTRAN(PTM,QRELTR)**

"Matrix transform"

**Purpose**

Applies a given 2D matrix transform

**Inputs**

PTM(2,3)        The transform matrix  
QRELTR

.TRUE.            Indicates that the given matrix  
transform should be applied  
incrementally to the current transform  
the order in which it is applied is  
determined by a prior call to MODEL  
or VIEWT

.FALSE.           Indicates that the given matrix  
transform replaces the current  
transform

**Errors**

07301            Degenerate transformation specified; no-  
op if the combination of the current  
modeling/viewing transform and the  
window/viewport transform result in a  
singular total transform, the old total  
transform is kept, but the new  
modeling/viewing transform is stored  
anyway

**MVLDPT**

"(Perform a) MOVE (to the load point (position))"

**Purpose**

Performs a MOVE to the 4663 load point position

**NDC2W2 (XNDC,YNDC,XWORLD,YWORLD)**

“(Convert) NDC (coordinates) to 2(-D) World (coordinates)”

**Purpose**

Converts 2-D NDC coordinates to 2-D world coordinates

**Inputs**

XNDC The X-axis NDC coordinate to be converted  
 YNDC The Y-axis NDC coordinate to be converted

**Outputs**

XWORLD An X-axis world coordinate  
 YWORLD A Y-axis world coordinate

**NDC2W3 (XNDC,YNDC,ZNDC,XWORLD,YWORLD,ZWORLD)**

“(Convert) NDC 3(-D) to World (Coordinates)”

**Purpose**

Converts 3-D NDC's to 3-D world coordinates

**Inputs**

XNDC The X-axis NDC coordinate to be converted  
 YNDC The Y-axis NDC coordinate to be converted  
 ZNDC The Z-axis NDC coordinate to be converted

**Outputs**

XWORLD An X coordinate in world space  
 YWORLD A Y coordinate in world space  
 ZWORLD A Z coordinate in world space

**NEWDEV (IDEVIC,IOPT)**

“New device”

**Purpose**

Directs IGL output to a different device (see Table 9)

**Inputs**

IDEVIC Device on which output is to be displayed; usually the four-digit Tektronix product number  
 IOPT The device option code; further defines device by indicating its options

**Errors**

15721 The specified device (IDEVIC)/option (IOPT) combination given in the call is not supported; no-op

**NEWPAG**

“(Start a) new page”

**Purpose**

Provides a clean surface for display of output

**NOCLIP**

“No clipping (of vectors)”

**Purpose**

Terminates viewport clipping

**NORMAL (N1,N2,PARRAY,QSNGL)**

“Normalize (matrix)”

**Purpose**

Returns the normalized version of an N1 x N2 matrix (PARRAY) or indicates that the array is singular

**Inputs**

N1 Row dimensions of input matrix  
 N2 Column dimensions of input matrix  
 PARRAY(N1,N2) The input array to be normalized

**Outputs**

PARRAY(N1,N2) The normalized array  
 QSNGL Set to .TRUE. if the matrix is singular

**NOSMOO**

“(Do) not smooth”

**Purpose**

Terminates line smoothing (default)

**OPNCAP (IFNAM)**

“Open capture (file)”

**Purpose**

Initiates capture of IGL output to a file

**Inputs**

IFNAM(6) A six character name assigned to the file being created; entered in current text format

**Errors**

No error messages are generated by OPNCAP; however an error is detected in HFOPEN if the file cannot be opened

**OPNPOL**

"Open polygon"

**Purpose**

Specifies that subsequent polygons are not automatically drawn as closed polygons; this is the default

**OPNSEG(ISEG)**

"Open segment"

**Purpose**

Opens a new segment

**Inputs**

ISEG            An integer (1-32767) to identify the new segment

**Errors**

03101          Parameter ISEG is not a legal segment name; no-op  
 03111          Retained segment ISEG already exists; no-op  
 03121          There is already an open retained segment; no-op  
 03122          Viewport/clipping ext. may cause unexpected results; report

**Defaults**

A segment opened by a call to OPNSEG will be type 2 unless you have called SETTYP to specify otherwise. Dynamic segment attributes of the new segment are determined by the system default or by calls to specific attribute-setting routines.

**PAG663(ISIZE,IFORM,IRATIO,QPRMPT)**

"(Change IGL/4663 page (size))"

**Purpose**

Updates the IGL environment in response to a change in 4663 parameter entry card settings for page size, margins, or aspect ratio

**Inputs**

ISIZE		
	Page	Size:
	1	C
	2	B
	3	A
	4	A2
	5	A3
	6	A4
IFORM		
	Page	Format:
	1	Drafting
	2	Graphing
IRATIO		
	Aspect	Ratio:
	1	Full page
	2	3X:2Y
	3	4X:3Y
	4	1X:1Y
	5	3X:4Y
	6	2X:3Y

QPRMPT        .TRUE. indicates a prompt is sent to the user to set the Parameter Entry Card

**Errors**

21651          ISIZE out of range (1,6); no-op  
 21652          IFORM out of range (1,2); no-op  
 21653          IRATIO out of range (1,6); no-op  
 21671          Device is not a 4663 plotter; no-op

**Note**

Requires a 4663 plotter with parameter entry card settings corresponding to argument values

**PANEL(ICNT,PXARAY,PYARAY)**

"Panel"

**Purpose**

Displays a panel or an emulated panel on display device

**Inputs**

ICNT            Number of points defining perimeter of panel

PXARAY(ICNT)    An array containing X coordinates of points defining panel perimeter

PYARAY(ICNT)    An array containing Y coordinates of points defining panel perimeter

**Errors**

00701            Points (ICNT) out of range (2,500) in relative vector mode, (3,500) in absolute vector mode; no-op

00721            Panel emulation not available; no-op

**PANL3D(ICNT,PXARAY,PYARAY,PZARAY)**

"Panel (draw in) 3-D"

**Purpose**

Draws a panel in the 3-D world space

**Inputs**

ICNT            Number of points defining perimeter of panel

PXARAY(ICNT)    Array containing X coordinates of points defining panel perimeter

PYARAY(ICNT)    Array containing Y coordinates of points defining panel perimeter

PZARAY(ICNT)    Array containing Z coordinates of points defining panel perimeter

**Errors**

01401            Points (ICNT) out of range (2,500) in relative vector mode or (3,500) in absolute vector mode; no-op

01421            Panel emulation not available; no-op

**PARALL**

"Parallel (projection)"

**Purpose**

Specifies 3-D parallel projection; this is the default

**Errors**

05521            Illegal to modify viewing environment with retained segment open; no-op

**PAT027(IPATNO,IPTDEF)**

"Pattern 4027"

**Purpose**

Specifies a non-default filling pattern for the 4027

**Inputs**

IPATNO            Pattern number being defined (8-127)

IPTDEF(14,8)     An array of numbers specifying colors of dots in a character cell pattern; entries should be in range 0-7, corresponding to the current color map

**Errors**

26701            Pattern IPATNO out of range (8,127); no-op

26721            4027 device driver not installed; no-op

**Note**

Requires Panel Support (Option 4C); fourth character in PAT027 is zero, not uppercase O.

## PATTERN(IPATNO,PANGL,PDIST)

"Pattern"

### Purpose

Specifies a non-default filling pattern for emulated panels; in Figure 4 each pattern is labeled with appropriate values for the arguments IPATNO, PANGL (defined in degrees), and PDIST (defined in GDUs)

### Inputs

IPATNO Pattern number (0-24); pattern 0 is the default  
PANGL Angle of lines in current angle units  
PDIST Distance between lines in current display surface units (lines in pattern 24 one raster apart)

### Errors

28801 Pattern IPATNO out of range (0,24); no-op  
28803 Distance between pattern lines (PDIST) is less than or equal to 0; no-op

### Note

Part of Panel Emulation (Option 3C)

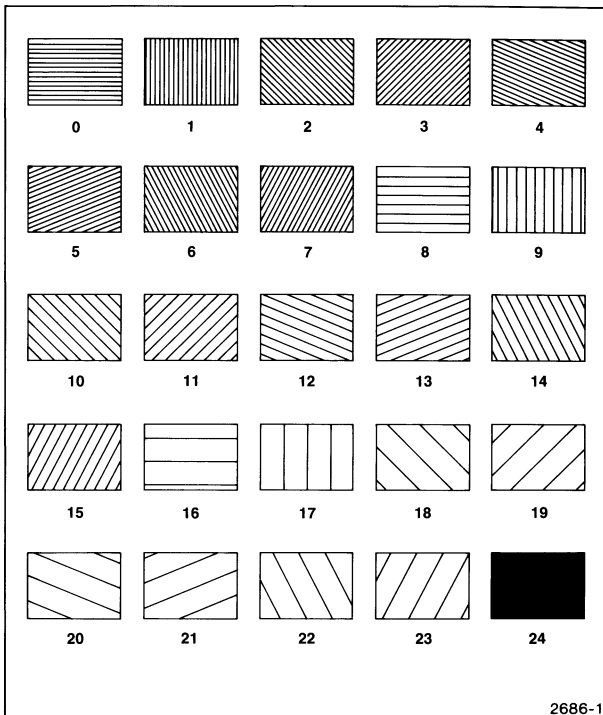

Figure 4. Default Patterns for Emulated Panels.

## PENCLR(ICOLOR,ISTN,QPRMPT)

"Pen color"

### Purpose

Maps a color index to a pen station

### Inputs

ICOLOR Color index (-2 to 999)  
-2 To "undefine" a pen station  
-1 Universal color  
ISTN Plotter pen station to be associated with the color index (-1, 1 to MAX-NUMBER-OF-STATIONS)  
-1 All stations; may only be used with ICOLOR = -2  
QPRMPT .TRUE. Indicates a prompt is sent to the user to load the specified color into the specified pen station

### Errors

10651 ICOLOR out of range (-2,999); no-op  
10652 ISTN not valid on current device; no-op  
10671 ICOLOR already assigned to another pen station; no-op  
10672 Attempt to map color when universal color is active; report  
10673 Attempt to assign a specific color to all stations; no-op  
10674 ISTN contains universal color-cannot reassign; no-op

## PENTYP(ITYPE,PENWID)

"Pen type"

### Purpose

Establishes "pen" width for extra-wide lines

### Inputs

ITYPE Type of line  
1 "Hot dog" (rounded) fat lines  
2 Calligraphic fat lines  
PENWID Width of pen, specified by a value from 1.0 to 100.0 representing the number of strokes of a pen that would fit inside the character from top to bottom; default is 20.0

### Errors

14701 ITYPE out of range (1,2); no-op  
14702 Pen width out of range (1.0,100.0); no-op

**PICDIS(IDEV,IFLEN,IFILE)**

"Display (a) picture (file)"

**Purpose**

Displays a pixel-format picture previously stored on a terminal flexible disk or in a host computer disk file

**Inputs**

IDEV	Numeric code for the input file device
1	Host-based file
2	Terminal (flexible disk) file
IFLEN	Length of the picture file name
IFILE	An array specifying the name of the file where the picture is stored in current user text format

**Errors**

17851	Invalid device for picture file; no-op
17871	Current device cannot support pixel data; no-op
17872	File specified is > 9 chars, truncated; report
17873	File name > 6 chars, truncated; report
17874	No open channels available; no-op
17876	Picture has too many rows for device; no-op
17877	Picture has too many columns for device; no-op
17878	Device has no flexible disk units; no-op

**PICSAV(IDEV,IFLEN,IFILE,IENCOD)**

"Save (a) picture (file)"

**Purpose**

Saves the pixel index values in the current pixel viewport on a terminal or host computer file

**Inputs**

IDEV	Numeric code for the device in which the picture will be saved
1	Host-based file
2	Terminal (flexible disk) file
IFLEN	Length of the picture file name to be created
IFILE	An array containing the name of the file where the picture is to be stored in the current user text format
IENCOD	The type of pixel encoding to be used in the file
1	Unencoded (raster)
2	Runlength

**Errors**

18051	Invalid device for picture file; no-op
18054	Invalid pixel encoding format specified; no-op
18071	Current device does not support pixel data; no-op
18072	File specified is > 9 chars; truncated; report
18073	File name is > 6 chars; truncated; report
18074	No open host channel is available; no-op
18075	Device has no flexible disk units; no-op
18076	Block mode communications not installed; no-op

**PIRAD**

"Pi-radians"

**Purpose**

Declares that angles are specified in pi-radians (2 to a circle)

**PIVOT(PXINV,PYINV)**

"Pivot point"

**Purpose**

Specifies the invariant pivot point for 2-D modeling transforms in the current coordinate system; the default is (0.0,0.0)

**Inputs**

PXINV	X coordinate of pivot point in world space
PYINV	Y coordinate of pivot point in world space

**PIVT3D(PNTL,PNHD)**

"Pivot 3-D"

**Purpose**

Specifies a pivot (invariant) point (PNTL) for 3-D modeling transforms and an axis of rotation (pivot axis) for ROTA3D; the pivot axis is a directed line segment from PNTL to PNHD

**Inputs**

PNTL(3) (X,Y,Z) the coordinates of the invariant point; also the tail of the pivot axis as defined by PNTL-PNHD

PNHD(3) (X,Y,Z) the coordinates of the pivot axis head as defined by PNTL-PNHD (defines an axis of rotation)

**Errors**

08601 PNTL and PNHD are defined to be the same point; null axis; no-op

**PIXPAT(IPATNO,INMROW,INMCOL,IROW,ICOL,IBNPIX,IPTDEF)**

"Pixel Pattern"

**Purpose**

Defines a panel fill pattern

**Inputs**

IPATNO Pattern number to be defined

INMROW Number of rows in IPTDEF

INMCOL Number of columns in IPTDEF

IROW Number of rows of the pixel pattern

ICOL Number of columns of the pixel pattern

IBNPIX Number of bits per pixel for the fill pattern

IPTDEF INMCOL by INMROW matrix of pixel index values

**Errors**

17751 IPATNO is out of range for current device; no-op

17752 INMCOL outrange 1 to MAXINT or < ICOL; no-op

17753 INMCOL outrange 1 to MAXINT or < IROW; no-op

17754 ICOL is greater than the device allows; no-op

17755 IROW is greater than the device allows; no-op

17756 IBNPIX is greater than the device allows; no-op

17757 Pixel value(s) in IPTDEF are outrange (0 . . . MAX INDEX); report

17771 Polygon fill capability not on device; no-op

17772 Device does not support pixel data; no-op

**Note**

Requires device capable of pixel access

**POLVAL(PX,IDEGP1,PCOEF)**

"Polynomial value"

**Purpose**

Computes the value of a polynomial at a given X value

**Inputs**

PX The X value at which the polynomial is to be evaluated

IDEGP1 One plus the degree of the polynomial to be evaluated

PCOEF(IDEGP1) The coefficients of the polynomial

**Outputs**

POLVAL Returned as a functional value; it is the value of the polynomial at PX

**Errors**

28701 IDEGP1 < 1; value returned is 0.0

**POLY(ICNT,XARRAY,YARRAY)**

"Poly (draw)"

**Purpose**

Performs a series of draws

**Inputs**

ICNT Size of XARRAY and YARRAY

XARRAY(ICNT) X coordinates of points to be drawn; specified in world space

YARRAY(ICNT) Y coordinates of points to be drawn; specified in world space

**Errors**

00301 Size of arrays(ICNT) less than or equal to 0; no-op

**Note**

If CLOPOL is in effect, the series of draws create a closed polygon, otherwise the polygon is not automatically closed

### POLY3D(ICNT,PXARAY,PYARAY,PZARAY)

"Poly (draw in) 3-D"

#### Purpose

Performs a series of 3-D draws

#### Inputs

ICNT                    Number of points to be drawn  
PXARAY(ICNT)        Array containing X coordinates of points  
PYARAY(ICNT)        Array containing Y coordinates of points  
PZARAY(ICNT)        Array containing Z coordinates of points

#### Errors

01201                ICNT less than or equal to 0; no-op

#### Note

If CLOPOL is in effect the series of draws creates a closed polygon, otherwise the polygon is not automatically closed

### POST3D

"Post-multiply (for modeling transforms) 3-D"

#### Purpose

Causes modeling transforms to be applied before previously specified transforms

### PRE3D

"Pre-multiply (for modeling transforms) 3-D"

#### Purpose

Causes modeling transforms to be applied after previously specified transforms

### PXLRD(ICNT,IPIXRY,IENCOD,IGOT)

"Pixel read"

#### Purpose

Reads pixel values from the pixel viewport starting at the current pixel beam position. The terminal must be in block mode

#### Inputs

ICNT                    Dimension of IPIXRY (number of pixel values to be read)  
IENCOD                 Pixel encoding type  
                          1                    Unencoded  
                          2                    Runlength encoded

#### Outputs

IPIXRY                 Array of pixels in integer form  
IGOT                    Number of integers returned in IPIXRY

#### Errors

17451                 Number of pixels requested is < 1; no-op  
17453                 Illegal pixel encoding format request; no-op  
17471                 Block mode communications is not installed; no-op  
17472                 Current device does not support pixel data; no-op

### PXLWRT(ICNT,IPIXRY,IENCOD)

"Pixel write"

#### Purpose

Writes pixel values in the pixel viewport starting at the current pixel beam position in the specified encoding format

#### Inputs

ICNT                    The number of pixels to be written  
IPIXRY                 The pixel values (indices) to be written  
IENCOD                 Pixel encoding type  
                          1                    Unencoded  
                          2                    Runlength encoded

#### Errors

17351                 Number of pixels requested is < 1; no-op  
17353                 Illegal pixel encoding format request; no-op  
17371                 Terminal does not support pixel data; no-op

#### Note

Requires terminal capable of pixel access

**PXY1X(IX,IY,IBUF)**

"(Encode an) X,Y pair (in raster memory space)"

**Purpose**

Builds an X,Y pair for a 4110 Series terminal in raster memory space

**Inputs**

IX The X coordinates in rasters (0,639)  
 IY The Y coordinates in rasters (0,479)  
 IBUF The terminal command buffer

**Outputs**

IBUF The updated terminal command buffer

**Errors**

13551 IX outside device's raster space; no-op  
 13552 IY outside device's raster space; no-op  
 13553 Terminal command buffer too small for data; no-op

**QCLP3D(QEDGE,QFRONT,QBACK)**

"Clip (in) 3-D?"

**Purpose**

Specifies 3-D clipping

**Inputs**

QEDGE  
 .TRUE. Edge clipping is on (default)  
 .FALSE. Edge clipping is off  
 QFRONT  
 .TRUE. Front plane clipping is on  
 .FALSE. Front plane clipping is off (default)  
 QBACK  
 .TRUE. Back plane clipping is on  
 .FALSE. Back plane clipping is off (default)

**Errors**

05821 Illegal to modify viewing environment with retained segment open; no-op

**RADIAN**

"Radians"

**Purpose**

Declares that angles are specified in radians (6.28313 to a circle)

**RASTER**

"Rasters"

**Purpose**

Specifies that values in subsequent routines which refer to the display surface are interpreted as rasters (see Table 8)

**RDFONT(IFNAM,IFILSZ,IFFNO,IFONT,QPAGE)**

"Read font"

**Purpose**

Reads a font from a permanent host file into the local IGL font storage

**Inputs**

IFNAM(6) Name of host file from which font is to be read; specified in current text format (ADE, A1, or AM)  
 IFILSZ Size of permanent file from which font is to be read; specified in terms of 20-word records  
 IFFNO An integer identifying a specific font in the host file  
 IFONT An integer you assign the font to identify it in local IGL font storage  
 QPAGE  
 .TRUE. Indicates that only frequently used characters of the given font are to be kept in local font storage  
 .FALSE. Indicates that the entire font is to be read into local font storage

**Errors**

01603 Font number (IFFNO) out of range (0, value set at installation); no-op  
 01613 Font (IFFNO) not defined; no-op  
 01621 No host-file communication channels available, call HFCLOS to clear one; no-op  
 01622 Font integrity error (incorrect termination code); abort  
 01623 Font integrity error (font does not match description); abort  
 01624 Not enough room in local IGL font storage to add character description; no-op  
 01641 IFONT already defined; no-op

**RDPHDR(ICHN,IHTYPE,ICNT,IPARMS,IGOT)**

"Read (a) picture (file) header"

**Purpose**

Reads and returns the information from a pixel file header

**Inputs**

ICHN The channel number of the file to be read  
 ICNT The number of parameters to be returned

**Outputs**

IHTYPE Header type  
 1 Standard header  
 2 Color model header  
 IPARMS Array of parameter values in header  
 IPARMS(1) Number of bits per pixel  
 IPARMS(2) XMIN of pixel viewport  
 IPARMS(3) YMAX of pixel viewport  
 IPARMS(4) YMIN of pixel viewport  
 IPARMS(5) YMAX of pixel viewport  
 IGOT Count of parameter values returned

**Errors**

18251 ICHN out of range (1,8); no-op  
 18253 Input buffer too small to return parameters; no-op  
 18261 File is not opened for sequential read; abort  
 18262 Illegal file header detected; abort  
 18271 End of file detected while reading a file header; abort  
 18272 Unrecognised delimiter in color information; abort  
 18273 Blank not found following type 1 header; report

**REMOVE**

"Remove (vectors)"

**Purpose**

Specifies selective erase mode

**Note**

Requires device capable of selective erasing

**RENSEG(ISEG,INEWSG)**

"Rename segment"

**Purpose**

Renames a retained segment

**Inputs**

ISEG The current integer segment name  
 INEWSEG A new segment name

**Errors**

03501 No retained segment known as ISEG; no-op  
 03502 INEWSEG is not a valid retained segment number; no-op  
 03512 Retained segment INEWSEG already exists; no-op

**REPLAY(IFNAM,QHOW)**

"Replay (captured file)"

**Purpose**

Replays a captured file

**Inputs**

IFNAM(6) Name of file to be replayed; entered in current text format

**QHOW**

.TRUE. If an error report is to be output with the replay  
 .FALSE. If an error report is not desired

**Errors**

16021 No host file channels available; abort  
 16022 Loss of data integrity on replay file; abort  
 16023 End of file encountered during replay; abort  
 16024 Missing tag (-999.0) on replay record; abort  
 16025 Buffer space overflow; abort  
 16027 Exceeded maximum replay depth; no-op  
 nnn48 Tried to replay routine number 'nnn' not entered at sysgen; abort  
 nnn49 Tried to replay routine number 'nnn' but cannot identify; abort

**REPORT(IERR,IARRAY)**

"Report (error description)"

**Purpose**

Displays the specified error message

**Inputs**

IERR The error number to be described

**Outputs**

IARRAY(80) Description of error, returned in current text format

**Errors**

16121 No host file communication channels available; no-op

**RESSEG(ILEN,IFNAM)**

"Restore segments (in saved display list)"

**Purpose**

Restores a retained segment display list which has been saved in a host file or on a flexible disk

**Inputs**

ILEN The length of the file name given in the following argument  
IFNAM The name (in the current text format) of the display list file to be restored

**Errors**

02371 Segment is already defined; proceed to next segment  
02372 No host file I/O channels available; no-op  
02373 Named file is already open; no-op  
02374 Cannot restore segments when a segment is open; no-op  
02376 4100 does not support local segment restore; report  
02377 First char of file name not alpha; no-op  
02378 File name specifier too long, trunc to 9 char; report  
02379 File name too long, truncated to 6 char; no-op

**RESTOR(PBLOCK)**

"Restore (environment)"

**Purpose**

Restores previously saved environmental condition

**Inputs**

PBLOCK(PBLOCK(2)) Name of array containing the previously saved environmental status

**Errors**

15101 The specified array is not intact or was not properly saved; abort  
15111 End of block internal security check failure; abort  
15121 Cannot modify viewing while a segment is open; abort

**REVT3D(PNDS,POINT)**

"Reverse transformation 3-D"

**Purpose**

Applies the reverse 3-D transform to PNDS to get its image in 3-D world space

**Inputs**

PNDS(3) (X,Y,Z) point in the 3-D viewport (GDU's)

**Outputs**

POINT(3) (X,Y,Z) point in world space coordinates

**REVTRN(PXSCRN,PYSCRN,PXUSER,PYUSER)**

"Reverse transformation"

**Purpose**

Performs the 2-space transformation from GDU space into world space

**Inputs**

PXSCRN X coordinate of screen position  
PYSCRN Y coordinate of screen position

**Outputs**

PXUSER Converted current user X coordinate in world space  
PYUSER Converted current user Y coordinate in world space

**RL1X(PVAL,IBUF)**

“(Encode a) 4110 series terminal real number”

**Purpose**

Place a real number in the terminal command buffer

**Inputs**

PVAL The real number to be encoded  
 IBUF The terminal command buffer

**Outputs**

IBUF The updated terminal command buffer

**Errors**

11452 Terminal command buffer too small for data; no-op

**RL63(PVAL,IBUF)**

“(Encode a) 4663 real number”

**Purpose**

Encodes a real number in ADE format and puts it in the plotter command buffer

**Inputs**

PVAL The real number to be encoded  
 IBUF The plotter command buffer; enough room must be provided to allow for all the ADE values in addition to the regular buffer overhead

**Outputs**

IBUF The updated plotter command buffer

**Errors**

20452 IBUF too small to convert integer to ADE; no-op

**RNUMBR(PVALUE,IPASTD,IMXCHR)**

“Real number (output)”

**Purpose**

Displays real number data as text

**Inputs**

PVALUE The real number to be displayed  
 IPASTD Maximum number of digits after the decimal point; set to -1 to suppress the decimal point  
 IMXCHR Maximum number of characters to be displayed

**Errors**

02101 IMXCHR < 1; no-op  
 02121 IMXCHR > 25; uses only first 25 characters

**ROTA3D(PANGAX)**

“Rotate (about a pivot axis)”

**Purpose**

Causes rotation about the pivot axis (which is defined by the PIVT3D routine)

**Inputs**

PANGAX Angle of rotation

**ROTATE(PANGLX,PANGLY)**

“Rotate (coordinate system)”

**Purpose**

Rotates the X- and Y-axes about the pivot point in current coordinate system

**Inputs**

PANGLX X-axis rotation  
 PANGLY Y-axis rotation

**Errors**

No errors are reported by ROTATE; however, any combination which would put the X- and Y-axes on the same line (that is, a combination with a difference of 90.0 degrees) is an error detected by MTRAN

**ROTXYZ(PXANG,PYANG,PZANG)**

“Rotate (3-D world coordinate system) XYZ (axis)”

**Purpose**

Causes rotation of the 3-D world coordinate system around one or more coordinate axes at the pivot point as defined in PIVT3D

**Inputs**

PXANG X-axis rotation angle  
 PYANG Y-axis rotation angle  
 PZANG Z-axis rotation angle

**RPT1X(INCNT,IARRAY,IGOTC)**

“(Receive a) report from a 4110 Series terminal”

**Purpose**

Receives a report from a 4110 Series terminal

**Inputs**

INCNT Number of characters to receive in IARRAY (including blank fill)

**Outputs**

IARRAY(INCNT) Name of the array that receives the characters  
 IGOTC Number of characters actually received

**Errors**

11651 Number of characters (INCNT) is negative; no-op

**RSETM**

"Reset modeling (transforms)"

**Purpose**

Resets the 3-D modeling transforms to the identity matrix

**RSETWV**

"Reset window/viewport (transforms)"

**Purpose**

Resets 3-D window/viewport transform to default values

**Errors**

04621 Illegal to modify viewing environment with retained segment open; no-op

**SAVPXL(ICNT,IPIXRY,IENCOD)**

"Save pixels (in a file)"

**Purpose**

Writes pixel index values to a pixel data file in either the runlength or raster encoding type

**Inputs**

ICNT The dimension of IPIXRY, the pixel values array

IPIXRY An array that holds the pixel index values to be written to a pixel data file

IENCOD An integer representing the encoding type of the pixel to write to the pixel data file

0 End-of-file marker  
1 Raster (unencoded)  
2 Runlength

**Errors**

17251 Negative ICNT; no-op  
17252 Negative value in IPIXRY; abort  
17253 Illegal pixel encoding type specified; no-op  
17261 Input count illegal for runcodes; no-op  
17271 File header not written properly; abort  
17272 Run count is negative; abort  
17273 Runlength is negative; abort  
02275 No retained segments defined; report  
02276 4100 does not support local segment save; report  
02277 First char of file name not alpha; no-op  
02278 File name specifier too long, trunc to 9 char; report  
02279 File name too long, truncated to 6 char; report

**SAVSEG(ILEN,IFNAM)**

"Save (a) segment (file)"

**Purpose**

Stores the active retained segment display list in a host computer file and/or on a terminal flexible disk

**Inputs**

ILEN The length of the file name given in the array IFNAM  
IFNAM Name of the file in which the display list is to be stored (specified in current text format). When used with 4110 Series terminals equipped with flexible disk drives, the file name may include a device number of the form: F0:

**Errors**

02272 No host file I/O channels available; no-op  
02273 File name already open; no-op  
02274 Cannot save segments when a segment is open; no-op

**Note**

Part of Graphic Segments Support (Option 4A)

**SCALE(PXSC,PYSC)**

"Scale (coordinate system)"

**Purpose**

Specifies a scale factor to be applied to the coordinate system

**Inputs**

PXSC Scale factor applied to X-axis  
PYSC Scale factor applied to Y-axis

**Errors**

No errors are reported by SCALE; however a zero scale factor creates an error detected by the MTRAN routine

**SCAXYZ(PXSCAL,PYSCAL,PZSCAL)**

"Scale (3-D world coordinate system) XYZ (axis)"

**Purpose**

Specifies a scale factor to be applied to the 3-D world coordinate system

**Input**

PXSCAL Scale factor applied to X-axis  
PYSCAL Scale factor applied to Y-axis  
PZSCAL Scale factor applied to Z-axis

**SELVW(IVWNUM)**

"Select (a) view"

**Purpose**

Selects the specified view as the current (active) view

**Inputs**

IVWNUM	Number of the view to become the current view
--------	---

**Errors**

16251	View number is out of range for the current device; no-op
16271	No multiple view capability on device; no-op
16272	View has not been defined; no-op

**Note**

Requires a device capable of multiple views

**SET2PV(PX,PY)**

"Set (segment type 1 and) 2 pivot point"

**Purpose**

Establishes the X and Y pivot point coordinates of subsequently defined type 1, 2, and 3 segments

**Inputs**

PX,PY	The pivot point defined in NDC's
-------	----------------------------------

**Default:**

Lower left corner of the viewport (PX= 0.0, PY= 0.0)

**Errors**

00951	X pivot coordinate is out of range; no-op
00952	Y pivot coordinate is out of range; no-op

**SET2TN(ISEG,PSX,PSY,PANG,PTX,PTY)**

"Set 2-D transform"

**Purpose**

Sets the 2-D image transform parameters of a type 2 or 3 segment or segments

**Inputs**

ISEG	
-3	Sets this transform for all type 2 and 3 segments in the match
-2	Sets the applicable portions of this transform for all subsequently created segments of all types
-1	Sets this transform for all existing type 2 and type 2 and 3 segments
1-32767	Sets this transform for the specified segment

PSX	X-axis scale factor (default: 1.0)
-----	------------------------------------

PSY	Y-axis scale factor (default: 1.0)
-----	------------------------------------

PANG	A counterclockwise angle of rotation in current angle units (default: 0.0)
------	--

PTX	X coordinate of the point in the viewport to which the segment pivot point will be translated; expressed in NDC's (default: 0.0)
-----	--

PTY	Y coordinate of the point in the viewport to which the segment pivot point will be translated; expressed in NDC's (default: 0.0)
-----	--

**Errors**

00751	Segment ISEG is not an existing retained segment; no-op
00755	X translation coordinate out of range; no-op
00756	Y translation coordinate out of range; no-op
00761	Illegal to modify dynamic attribute of open segment; no-op
00771	Parameter ISEG out of range; no-op
00781	The seg's type is not compatible with current req.; no-op

### SET3PV(PX,PY,PZ)

"Set (segment type 1, 2, and) 3 pivot (point)"

#### Purpose

Establishes the pivot point of subsequently defined type 1, 2 and 3 segments

#### Inputs

PX X pivot coordinate; defined in NDC's (default: 0.0)  
PY Y pivot coordinate; defined in NDC's (default: 0.0)  
PZ Z pivot coordinate; defined in NDC's (default: 0.0)

#### Errors

01051 X pivot coordinate out of range; no-op  
01052 Y pivot coordinate out of range; no-op  
01053 Z pivot coordinate out of range; no-op  
01072 3-D support is not available; no-op

#### Note

Requires installation of 3-D Graphics Support

### SET3TN(ISEG,PSX,PSY,PSZ,PAX,PAY,PAZ,PTX,PTY,PTZ)

"Set (type) 3 (segment image transform)"

#### Purpose

Sets the image transform parameters of a type 3 segment or segments

#### Inputs

ISEG  
-3 Sets this transform for all type 3 segments in the match class  
-2 Sets the transform for all subsequently defined segments of all types  
-1 Sets this transform for all existing type 3 segments  
1-32767 Sets this transform for the specified type 3 segment  
PSX X-axis scale factor (default: 1.0)  
PSY Y-axis scale factor (default: 1.0)  
PSZ Z-axis scale factor (default: 1.0)  
PAX X-axis angle of rotation (default: 0.0)  
PAY Y-axis angle of rotation (default: 0.0)  
PAZ Z-axis angle of rotation (default: 0.0)

#### Note

PAX, PAY, and PAZ are expressed in current angle units; rotation around an axis is positive if, when looking down the axis toward the NDC origin, the rotation appears to be clockwise

PTX

X-axis coordinate of the point to which the segment pivot point is moved before drawing the segment (default: 0.0)

PTY

Y-axis coordinate of the point to which the segment pivot point is moved before drawing the segment (default: 0.0)

PTZ

Z-axis coordinate of the point to which the segment pivot point is moved before drawing the segment (default: 0.0)

#### Errors

00851 Segment ISEG is not an existing retained segment; no-op  
00858 X translation coordinate out of range; no-op  
00859 Y translation coordinate out of range; no-op  
00860 Z translation coordinate out of range; no-op  
00861 Illegal to modify dynamic attribute of open segment; no-op  
00871 Parameter ISEG out of range; no-op  
00872 3-D support not available; no-op  
00881 The seg's type is not compatible with current req.; no-op

#### Note

Requires installation of 3-D Graphics Support

### SETAPT(PVAL)

"Set (pick) aperture (size)"

#### Purpose

Sets the pick aperture size

#### Inputs

PVAL Length (in current display surface units) of a side of the square pick aperture

#### Errors

00251 PVAL parameter is not a valid value (< 0.0); no-op

(continued on next page)

**SETBLK(IBLKS)**

"Set (segment) block (size)"

**Purpose**

Specifies the segment data block size in the display list

**Inputs**

IBLKS            Number of 20-word records to be used as a continuous segment data block; each 20-word record equals one block (default: block size of 2 records)

**Errors**

00151            Specified block size < 2; no-op  
00161            Segment data file previously specified; no-op

**SETBTM(IMODE)**

"Set batch mode"

**Purpose**

Specifies which kinds of display changes will be batched

**Inputs**

IMODE  
2                Defers visible changes to retained segments; changes to nonretained segments are not deferred  
3                Defers changes which cause a "new page" action; erase and redraw for terminal; paper advance or prompt to change paper for plotter (default: 3)  
4                Defers nothing

**Errors**

00451            IMODE not in range (2,4); no-op  
00471            Illegal to change mode with batching in effect; no-op

**SETCUR(ISEG)**

"Set (graphic) cursor"

**Purpose**

Specifies the graphic cursor to be used for subsequent graphic input (GIN) functions

**Inputs**

ISEG            The name of the cursor to be used  
0                The crosshair cursor (default)  
1-32767        A retained segment

**Errors**

14551            ISEG value out of range (0,32767); no-op  
14571            Device does not support user defined cursors; no-op

**SETDET(ISEG,QVAL)**

"Set (segment) detectability (attribute)"

**Purpose**

Determines whether a retained segment can be picked

**Inputs**

ISEG  
-3               Establishes detectability of all segments in the match class  
-2               Establishes detectability of all subsequently created segments  
-1               Establishes detectability of all segments  
1-32767        Establishes detectability of specified segment  
QVAL  
.TRUE.           Indicates that the segment is detectable  
.FALSE.          Indicates that the segment is not detectable; default

**Errors**

01351            Retained segment ISEG does not exist; no-op  
01361            Illegal to modify dynamic attribute of open segment; no-op  
01371            ISEG out of range; no-op

## SETDM(ISEG,IMODE)

"Set display mode"

### Purpose

Sets the display mode of a given segment

### INPUTS

ISEG	The integer name of the segment or segments whose display mode is to be set
-1	All defined segments
-2	All segments created in the future (the new default)
-3	All segments in the match class
1-32767	The number of a particular retained segment
IMODE	Display mode of the specified segment For the 4114:
1	Storage mode
2	Refresh mode
	For the 4112 and 4113:
1	Set mode
2	XOR mode

### Errors

14251	Segment ISEG out of range (-1,-3) or (1-32767); no-op
14252	Display mode received from device is invalid; no-op
14271	Cannot change dynamic att of open segment; no-op

## SETFML(PDIST)

"Set (plotter) form length"

### Purpose

Sets a form length for advancing the media

### Inputs

PDIST	The new form length in display surface units
-------	--

### Errors

22451	PDIST less than or equal to 0.0; no-op
22471	Media advance option not present on device; no-op

### Note

Requires a device capable of automatically advancing the media

## SETGIN(IDEV)

"Set Graphic Input (GIN) device"

### Purpose

Tells the host system which device will provide graphic input (GIN) data

### Inputs

IDEV	Device to be used for subsequent graphic input
------	--

### Errors

04801	Specified GIN device (IDEV) < 0; no-op (If the specified GIN device is not available, the error is reported by the device driver routine and IDEV is set to 1)
-------	--

## SETGRD(PXGRID,PYGRID)

"Set gridding"

### Purpose

Sets X and Y grid spacing for subsequent GIN operations

### Inputs

PXGRID	X grid spacing in world space units
PYGRID	Y grid spacing in world space units

### Errors

10051	Negative X-grid spacing specified; no-op
10052	Negative Y-grid spacing specified; no-op
10071	Gridding illegal — world rotation not 90° multiple; no-op
10072	Gridding not legal with billboard active; no-op
10073	Device does not support input gridding; no-op

**SETHIL(ISEG,QVAL)**

"Set (segment) highlight (attribute)"

**Purpose**

Determines whether a retained segment is highlighted

**Inputs**

ISEG  
 -3 Establishes highlight attribute of segments in the match class  
 -2 Establishes highlight attribute of all subsequently created retained segments  
 -1 Establishes highlight attribute of all retained segments  
 1-32767 Establishes highlight attribute of a specified retained segment

**QVAL**

.TRUE. Indicates that the segment is highlighted  
 .FALSE. Indicates that the segment is not highlighted (default)

**Errors**

01251 Retained segment ISEG does not exist; no-op  
 01261 Illegal to modify dynamic attribute of open segment; no-op  
 01271 ISEG out of range; no-op

**SETINK(INK)**

"Set inking"

**Purpose**

Enables or disables inking for subsequent executions of LOCATE and LOC3D

**Inputs**

INK Inking switch  
 0 Do not ink for subsequent GIN operations  
 1 Ink for subsequent GIN operations

**Errors**

10251 Ink code out of range (0,1); no-op  
 10271 Device does support inking feature; no-op

**Note**

Requires a device capable of inking

**SETMCL(IMNUM,IMRAY,INMNUM,INMRAY)**

"Set (the current segment) match class"

**Purpose**

Establishes the membership of the segment match class

**Inputs**

IMNUM The number of classes to which a segment must belong to be included in the match class  
 IMRAY An integer array containing the names of classes to which a segment must belong to be a member of the match class  
 INMNUM The number of classes to which a segment must not belong if it is to be to be a member of the match class  
 INMRAY An integer array containing the names of classes to which a segment must not belong if it is to be included in the match class

**Errors**

02151 Parameter IMNUM .LT. 0; no-op  
 02152 Class ID not in range (-1,1-64); no-op  
 02153 Parameter INMNUM .LT. 0; no-op  
 02162 Number of classes > 64; use first 64  
 02171 A class is in both the "match" and "nomatch" arrays; no-op

**SETPBM(IXPOS,IYPOS)**

"Set (the) pixel beam (position)"

**Purpose**

Moves the beam to the specified location in the pixel viewport

**Inputs**

IXPOS X position of the new pixel beam relative to the lower left corner of the pixel viewport  
 IYPOS Y position of the new pixel beam relative to the lower left corner of the pixel viewport

**Errors**

18551 IXPOS is outside of pixel viewport; no-op  
 18552 IYPOS is outside of pixel viewport; no-op  
 18571 Current device does not support pixel access; no-op

**Note**

Requires a device capable of pixel access

**SETPID(ID)**

"Set (segment) pick ID"

**Purpose**

Identifies a portion of a retained segment for picking

**Input**

ID

0 Indicates that the subsequent graphics will not be pickable

1-32767 The pick ID associated with subsequent text or graphics (default: 1)

**Errors**

00551 ID out of range (0,32767); no-op

00571 No retained segment open; no-op

**SETPNL(IOVR,IFBRDY,ISYNCH)**

"Set panel filling mode"

**Purpose**

Determines how panels are to be filled

**Outputs**

IOVR Overstrike or replace mode value

0 Replace (default: 0)

1 Overstrike

IFBRDY "Fill-over-boundary" value

0 No (default: 0)

1 Yes

ISYNCH Determines how the fill pattern is to be oriented on the display:

0 The pattern is synchronized to the viewport (default)

1 The pattern is synchronized to the lower left panel edge

2 The pattern is synchronized to the entire screen

**Errors**

18851 IOVR is out of range for current device; no-op

18852 IFBRDY is out of range for current device; no-op

18853 ISYNCH is out of range for current device; no-op

18871 No hardware fill capability on device; no-op

**Note**

Requires a device capable of hardware fill

**SETPRI(ISEG,IPRTY)**

"Set (segment display) priority"

**Purpose**

Determines the display priority of a specified retained segment or segments

**Inputs**

ISEG

-3

Establishes the display priority of segments in the match class

-2

Establishes the default segment display priority

-1

Establishes display priority of all retained segments

1-32767

Establishes priority attribute of specified retained segment

IPRTY

An integer from 0 to 32767 denoting display priority of the segment; priority increases with the value of IPRTY (default: 0)

**Errors**

01451 Retained segment ISEG does not exist; no-op

01452 IPRTY out of range (0-32767); no-op

01461 Illegal to modify dynamic attribute of open segment; no-op

01471 Parameter ISEG out of range; no-op

**SETPVW(IXMIN,IXMAX,IYMIN,IYMAX)**

"Set pixel viewport (dimensions)"

**Purpose**

Sets the pixel viewport position and size; coordinates are in 640 by 480 raster space

**Inputs**

IXMIN

Minimum X value of the pixel viewport

IXMAX

Maximum X value of the pixel viewport

IYMIN

Minimum Y value of the pixel viewport

IYMAX

Maximum Y value of the pixel viewport

**Errors**

17951 XMIN is not in range (0,639); no-op

17952 XMAX is not in range (0,639); no-op

17953 YMIN is not in range (0,479); no-op

17954 YMAX is not in range (0,479); no-op

17971 Device does not support pixel data; no-op

17972 XMAX < XMIN; no-op

17973 YMAX < YMIN; no-op

**Note**

Requires a device capable of pixel access

**SETPXL(ISRFNM,IALU)**

"Sets pixel (viewing environment)"

**Purpose**

Specifies what surface a pixel viewport is on and what ALU mode operates on existing pixels and pixels to be written

**Inputs**

ISRFNM Specifies which surface of the pixel viewport is on; note: -1 specifies the "super surface" (default: 1)

IALU Arithmetic and logic unit mode number (default: 11); see Table 11, ALU Modes, for values

**Errors**

18651 Surface number is out of range for current device; no-op

18652 IALU is out of range for current device; no-op

18671 Current device does not support pixel data; no-op

18672 No bit planes allocated to surface; no-op

**Note**

Requires a device capable of pixel access

Table 11

**ALU MODES**

ALU Mode Parameter	Operation	Use
1	not A <sup>1</sup>	Reverse video of existing image
2	not (A or B)	Transparent
3	(not A) and B	
4	0	
5	not (A and B)	Reverse video of new image
6	not B	
7	A xor B	Used twice, makes original image reappear
8	A and (not B)	
9	(not A) or B	New image completely replaces old image; "set mode"; (default)
10	not (A xor B)	
11	B	
12	A and B	
13	1	Maximum index
14	A or (not B)	New image is written on top of old image; "overstrike mode"
15	A or B	
16	A	

<sup>1</sup> "A" is a pixel index in the currently displayed image and "B" is a pixel index in the image to be displayed.

**SETRUB(IRUBND)**

"Set rubberbanding"

**Purpose**

Enables or disables rubberbanding for subsequent executions of LOCATE and LOC3D

**Inputs**

IRUBND

0 Rubberbanding is on for subsequent GIN functions

1 Rubberbanding is off for subsequent GIN functions (default)

**Errors**

10751 IRUBND out of range (0,1); no-op

10771 Device does not support rubberbanding; no-op

**Note**

Requires a device capable of rubberbanding

**SETSPD(IUNITS,PSPEED)**

"Set speed"

**Purpose**

Sets maximum speed for a device with variable speeds

**Inputs**

IUNITS	Units in which the speed is assigned
1	Millimeters
2	Inches
PSPEED	Speed in units per second (real numbers greater than zero)

**Errors**

26621	Device does not have variable speeds; no-op
26622	IUNITS is out of range (1,2); no-op
26623	PSPEED is less than or equal to zero; no-op

**Note**

Requires a device with variable speeds

**SETSRF(ICNT,ISRFRY)**

"Set surface (bit planes)"

**Purpose**

Allocates bit planes to a surface or surfaces

**Inputs**

ICNT	Number of elements in ISRFRY
ISRFRY	Array with number of elements corresponding to the number of surfaces; each element denotes the number of planes allocated to the corresponding surface

**Errors**

16451	Illegal number of surfaces for device; no-op
16452	A surface has more planes than device; no-op
16461	Number of planes allocated > device max; no-op
16471	No definable surfaces on device; no-op

**Note**

Requires a device capable of multiple surfaces

**SETSTR(QSTR,ITIME,PDIST)**

"Set stroking"

**Purpose**

Enables or disables stroke input for digitizing with a graphics tablet

**Inputs**

QSTR	Stroke parameters for subsequent locates:
.TRUE.	Stroke input enabled with the specified time and distance filtering
.FALSE.	Stroke input disabled
ITIME	The value (in milliseconds) to be used for stroke time filtering; zero denotes no time filtering for subsequent LOCATE's; when stroking is disabled the parameter is ignored
PDIST	The value (in world space) to be used for stroke distance filtering; zero denotes no distance filtering for subsequent LOCATE's; when stroking is disabled the parameter is ignored

**Errors**

10452	Time filter parameter < 0; no-op
10453	Distance filter parameter < 0; no-op
10471	Device does not support stroke input; no-op
10472	Distance filter illegal — world rotation not 90° multiple; no-op
10473	Distance filtering illegal with non-unity aspect ratio; no-op
10474	Distance filtering illegal with billboard active; no-op

**Note**

Requires a device capable of stroke input

### SETTRN(ISEG,PTX,PTY)

“Set (image) translation”

#### Purpose

Sets the 2-D image translation of a type 1, 2, or 3 segment or segments

#### Inputs

ISEG	
-3	Sets the X,Y translation of all segments in the match class
-2	Sets the X,Y translation of all subsequently created segments
-1	Sets the X,Y translation of all retained segments
1-32767	Sets the X,Y translation of the specified retained segment
PTX	X-axis NDC coordinate at which the segment's pivot point will lie after translation (default: 0.0)
PTY	Y-axis NDC coordinate at which the segment's pivot point will lie after translation (default: 0.0)

#### Errors

00651	Retained segment ISEG does not exist; no-op
00652	X translation coordinate out of range; no-op
00653	Y translation coordinate out of range; no-op
00661	Illegal to modify dyn. attr. of open segment; no-op
00671	ISEG out of range; no-op

### SETTYP(ITYPE)

“Set (segment) type”

#### Purpose

Specifies the type of segment opened by a call to OPNSEG

#### Inputs

ITYPE	
0-3	An integer type designation (default: 2)

#### Errors

00351	Illegal segment type specified; no-op
00361	3-D terminal support not available; no-op
00371	All segments are type 2 on terminal only; no-op
00372	3-D support not available; no-op

### SETVIS(ISEG,QVAL)

“Set (segment) visibility (attribute)”

#### Purpose

Determines whether a retained segment is visible

#### Inputs

ISEG	Establishes visibility of:
-3	All segments in the match class
-2	All subsequently created segments
-1	All retained segments
1-32767	Specified retained segment
QVAL	
.TRUE.	Indicates that the segment is visible (default)
.FALSE.	Indicates that the segment is invisible

#### Errors

01151	Retained segment ISEG does not exist; no-op
01161	Illegal to modify dynamic attribute of open segment; no-op
01171	Parameter ISEG out of range; no-op

### SETVW(IVWNUM,ISRFNM,IBCKGD,IBORDR)

“Set view (attributes)”

#### Purpose

Defines a view and sets its attributes

#### Inputs

IVWNUM	View number to be defined
ISRFNM	Number of the surface on which to place the view
IBCKGD	Color index used to erase the view (the wipe index)
IBORDR	Color index of the view border (when visible)

#### Errors

16051	View number is out of range for current device; no-op
16052	Illegal surface number; no-op
16053	Background color index < 0; no-op
16071	No multiple view capability on device; no-op

#### Note

Requires device capable of multiple views

**SGFNAM(NAME)**

"Segment file name"

**Purpose**

Names the host computer segment display list file before it is opened

**Inputs**

NAME An integer array containing the segment file name in the current text format (6 characters maximum)

**Errors**

02451 Segment file name already open; no-op  
02471 Host files not supported in terminal configuration; no-op

**SHR3D(NAXFRM,NAXTO,PANGL)**

"Shear 3-D (axis)"

**Purpose**

Shears one 3-D axis to another axis by specified angle

**Inputs**

NAXFRM Sheared axis (X= 1, Y= 2, Z= 3)  
NAXTO Reference axis (X= 1, Y= 2, Z= 3)  
PANGL Angle of shear in current angle units

**Errors**

08103 Angle equals 90 degrees, tangent is undefined; no-op  
8112 Illegal axis; no-op

**SKIP**

"Skip (the next vector)"

**Purpose**

Makes the next vector invisible

**SMOOTH**

"Smooth (a line)"

**Purpose**

Initializes line smoothing

**SPLINE(PS,ICNT,PDEPRY,PSRAY,PCOEF,PSMAX)**

"Spline fit"

**Purpose**

Returns the coefficients of a cubic polynomial fitted within a specified interval

**Inputs**

PS A value which is compared to the elements in PSRAY to define the interval within which the curve is to be fitted  
ICNT The size of the control array (PSRAY)  
PDEPRY(ICNT) Array containing the dependent (Y-axis) variable to be fit  
PSRAY(ICNT) Array of independent variable values arranged in ascending order

**Outputs**

PCOEF(4) The coefficients of a cubic polynomial fitted to the interval; the coefficients contain the value given for PS and are valid up to PSMAX  
PSMAX The maximum PS value for which the polynomial defined by PCOEF is valid

**Errors**

28101 PS < PSRAY(1) or PS > PSRAY(ICNT); PCOEF is set to all zeroes and PSMAX is set to PS - 1.0; no-op  
28102 ICNT < 1.0; no-op  
28121 Singular matrix specified; abort

**SRFPRI(ISRFNM,ISPRIO)**

"(Set) surface priority"

**Purpose**

Assigns a display priority to a surface

**Inputs**

ISRFNM A surface number  
ISPRIO The surface priority to be assigned to the surface

**Errors**

16751 Surface number is out of range for the device; no-op  
16752 Surface priority is out of range for the device; no-op  
16771 No definable surfaces on device; no-op

**Note**

Requires a device with definable surfaces

**SRFVIS(ISRFNM,ISVIS)**

“(Set) surface visibility”

**Purpose**

Sets the visibility of the specified surface

**Inputs**

ISRFNM A surface number  
 ISVIS The visibility of the surface:  
 0 Invisible  
 1 Visible  
 2 Alternating (the surface blinks)

**Errors**

16651 Surface number is out of range for the device; no-op  
 16652 Surface priority is out of range for the device; no-op  
 16671 No definable surfaces on device; no-op

**Note**

Requires a device with definable surfaces

**STAT63(ICODE,INUM,IARRAY,IGOT)**

“(Request) status of 4663”

**Purpose**

Requests 4663 plotter status information (see Tables 12 and 13)

**Inputs**

ICODE Opcode to determine what is being requested from the status registers  
 INUM The size of IARRAY for information requested

**Outputs**

IARRAY The array containing the requested status information  
 IGOT The number of elements returned in IARRAY

**Errors**

21951 ICODE out of range (1,7); no-op  
 21952 Less than one value requested; no-op  
 21962 Length of IARRAY less than number of values returned; no-op  
 21971 Less than 7 ADE values returned from plotter; no-op (this may be an indication of a communication problem)  
 21972 Device is not a 4663 plotter, no-op

**Note**

Requires a device with definable surfaces

**Table 12**  
**PLOTTER STATUS REPORT**

ICODE	Location	Request	
1		Device status; returns 16 values:	
	1	Out of media	
	2	Local position modification	
	3	Local parameter modification	
	4	Local data reset	
	5	Unused	
	6	Roll mode true if selected	
	7	Pause/busy	
	8	X mirrored	
	9	Y mirrored	
	10-13	Virtual position of current clipping limits (4 values in plotter units)	
	14	Communications error	
	15	Command/response error	
	16	Internal error	
	2	1	Currently available RAM; returns 1 value
		3	1
4			1-3
5	1-2	X, Y position coordinates; returns 2 values in plotter units	
	6	1-2	Pen status (up, down) and pen station number (1, 2, or crosshairs: 0); returns 2 values
7		1	Plot time; returns 1 value; NOTE: The change in plot time is what should be noted here, since the plotter may return a negative value

**Table 13**  
**STATUS ARRAY SIZE**

ICODE	INUM
1	16
2	1
3	1
4	3
5	2
6	2
7	1

**STORPN**

"Store pens"

**Purpose**

Stores all pens

**Errors**

26921 Current device cannot store pens; no-op

**Note**

Requires a device capable of storing pens

**STRPNT(PX,PY)**

"Starting point (for line being smoothed)"

**Purpose**

Specifies a pseudo-starting point for calculation of a smoothed line

**Inputs**

PX	X coordinate of pseudo-starting point
PY	Y coordinate of pseudo-starting point

**STRSLP(PDX,PDY)**

"Starting slope (for line being smoothed)"

**Purpose**

Specifies starting slope for smoothed line

**Inputs**

PDX	The change in X (for determining the starting slope)
PDY	The change in Y (for determining the starting slope)

**SVE3TR(ILEN,PBLOCK)**

"Save 3-D (modeling) transform (environment)"

**Purpose**

Saves 3-D modeling transforms

**Inputs**

ILEN	Size of the array into which the 3-D modeling transform environment is to be saved; should be set at least to 27
------	--

**Outputs**

PBLOCK(ILEN)	The saved status array; must be dimensioned to at least ILEN
PBLOCK(1) = 6.0	Identifies PBLOCK() as a 3-D modeling transform save block
PBLOCK(2) = 27	Total number of elements used in PBLOCK
PBLOCK(3) to PBLOCK(PBLOCK(2) - 1)	The actual status data
PBLOCK(PBLOCK(2)) = -9999.0	Validity and logical end of block marker

**Errors**

19701	ILEN too small; PBLOCK is altered up to ILEN; abort
-------	---

**SVE3VW(ILEN,PBLOCK)**

"Save 3-D viewing (environment)"

**Purpose**

Saves 3-D viewing environment

**Inputs**

ILEN	Size of the array into which the 3-D viewing status is to be saved; should be at least 82.0
------	---

**Outputs**

PBLOCK(ILEN)	The saved status array
PBLOCK(1) = 5.0	Identifies PBLOCK() as a 3-D viewing environment save block
PBLOCK(2) = 82.0	Total number of elements used in PBLOCK
PBLOCK(3) to PBLOCK(81)	The actual status data
PBLOCK(PBLOCK(2)) = -9999.0	Validity and logical end of block marker

**Errors**

19801	ILEN too small; PBLOCK is altered up to ILEN; abort
-------	---

**SVEALL(ILEN,PBLOCK)**

"Save all (environmentals)"

**Purpose**

Saves the entire current environmental status into a specified array

**Inputs**

ILEN                    Size of the array into which the environmental status is to be saved; should be at least 220; the actual array size is dependent upon your system configuration

**Outputs**

PBLOCK(ILEN)            The saved status array; must be dimensioned to ILEN

PBLOCK(1) = 1.0        Identifies PBLOCK() as a collection of all environmental save blocks

PBLOCK(2) = 220.0      Total number of elements in PBLOCK actually used

PBLOCK(3) to  
PBLOCK(PBLOCK(2) - 1)    The actual status data

PBLOCK(PBLOCK(2))    Validity and logical end of block marker = -9999.0

**Errors**

No errors are reported by this routine; however, errors are reported by SVEGRA, SVETXT, SVE3TR, SVE3WV, SVEWVT or SVETRN; which SVEALL calls to save the environment

**SVEGRA(ILEN,PBLOCK)**

"Save graphics (environment)"

**Purpose**

Saves current graphic environmental status into a specified array

**Inputs**

ILEN                    Size of the array into which the graphic status is to be saved

**Outputs**

PBLOCK(ILEN)            The saved status array; must be dimensioned to at least ILEN

PBLOCK(1) = 2.0        Indicates a graphic save block

PBLOCK(2)                Total number of elements in PBLOCK actually used

PBLOCK(3) to  
PBLOCK(PBLOCK(2) - 1)    The actual status data

PBLOCK(PBLOCK(2))    Validity and logical end of block marker = -9999.0

**Errors**

16201                    Array ILEN too small; PBLOCK is altered up to ILEN; abort

**SVEMVS(ILEN,PBLOCK)**

"Save multiple views, surfaces"

**Purpose**

Saves the attributes and parameters associated with multiple views and surfaces

**Inputs**

ILEN                    Number of elements in PBLOCK storage array (172)

**Outputs**

PBLOCK(ILEN)            Saved array of multiple view and surface data

PBLOCK(1)                Returns 9.0 to indicate the kind of information stored in PBLOCK

PBLOCK(2)                Returns the number of elements of PBLOCK in which information has been stored

PBLOCK(3) to  
PBLOCK (PBLOCK(2) - 1)    Returned data

PBLOCK(PBLOCK(2))    Returns -9999.0 validity and end-of-block marker

**Errors**

15151                    Not enough space, 172 needed; PBLOCK altered to ILEN

**SVETRN(ILEN,PBLOCK)**

"Save transform (specifications)"

**Purpose**

Saves current transform specifications into a specified array

**Inputs**

ILEN                    Size of the array into which the transform specifications are to be saved

**Outputs**

PBLOCK(ILEN)            The saved status array; must be dimensioned to ILEN

PBLOCK(1) = 3.0        Indicates a transform save block

PBLOCK(2)                Total number of elements in PBLOCK actually used

PBLOCK(3) to PBLOCK(PBLOCK(2) - 1)            The actual status data

PBLOCK(PBLOCK(2))    Validity and logical end of block marker = -9999.0

**Errors**

16301                    Array ILEN too small; no-op, but PBLOCK is altered up to ILEN

**SVETXT(ILEN,PBLOCK)**

"Save text (environment)"

**Purpose**

Saves current text environmental status into a specified array

**Inputs**

ILEN                    Size of the array into which the graphic status is to be saved

**Outputs**

PBLOCK(ILEN)            The saved status array; must be dimensioned to ILEN

PBLOCK(1) = 4.0        Identifies a text environment save block

PBLOCK(2)                Total number of elements in PBLOCK actually used

PBLOCK(3) to PBLOCK(PBLOCK(2) - 1)            The actual status data

PBLOCK(PBLOCK(2))    Validity and logical end of block marker = -9999.0

**Errors**

16401                    ILEN too small; no-op, but PBLOCK is altered up to ILEN

**SVEWVT(ILEN,PBLOCK)**

"Save (2-D) window/viewport (and billboard) transforms"

**Purpose**

Saves 2-D window/viewport and billboard control points

**Inputs**

ILEN                    Size of the array into which transforms are to be saved; should be set to at least 26

**Outputs**

PBLOCK                    The saved status array

PBLOCK(1) = 8.0        Identifies PBLOCK() as a window/viewport and billboard save block

PBLOCK(2) = 26.0        Total number of elements in PBLOCK actually used

PBLOCK(3) to PBLOCK(PBLOCK(2) - 1)            The actual status data

PBLOCK(PBLOCK(2))    Validity and logical end of block marker = -9999.0

**Errors**

19601                    ILEN too small; no-op, but PBLOCK is altered up to ILEN

**TEXT(ILENST,ICHRAY)**

"Text (output)"

**Purpose**

Displays a string of alphanumeric text

**Inputs**

ILENST                    Number of characters in the string

ICHRAY                    Name of the array containing the text string in the current user text format

**Errors**

02001                    ILENST < 0; no-op

02021                    ILENST > 120; displays first 120 characters

02022                    Text emulation (Option 3D) not available; no-op

**TRAN2(PXUSER,PYUSER,PXCRN,PYSCRN)**

"Transform (in) 2(-space)"

**Purpose**

Performs 2-space transformation from world space into device-independent screen space (GDU's)

**Inputs**

PXUSER	X coordinate of point in world space
PYUSER	Y coordinate of point in world space

**Outputs**

PXSCRN	X coordinate converted to display surface units
PYSCRN	Y coordinate converted to display surface units

**TRAN3D(POINT,PNDS)**

"Transforms (in) 3-D"

**Purpose**

Apply current transform to POINT and return PNDS in device screen space units

**Inputs**

POINT(3)	(X,Y,Z) point in world space
----------	------------------------------

**Outputs**

PNDS(3)	(X,Y,Z) point in screen space
---------	-------------------------------

**TRANSL(PXDISP,PYDISP)**

"Translate (coordinate system)"

**Purpose**

Performs 3-space transformation from world space into device-independent screen space (GDU's)

**Inputs**

PXDISP	Displacement along X-axis
PYDISP	Displacement along Y-axis

**Errors**

No errors reported by TRANSL, but see MTRAN for possible errors generated there

**TRIDNT(QFULL)**

"Transform identity"

**Purpose**

Resets the modeling/viewing transform, the window/viewport transform, or both, to identity (initial values)

**Inputs**

QFULL	.TRUE.	Resets modeling/viewing transforms and the window/viewport transform (WINDOW, VWPORT) to identity
	.FALSE.	Resets modeling/viewing transform (SCALE, ROTATE, TRANSL, MTRAN) and PIVOT to identity

**Errors**

07721	Illegal to modify viewing environment with retained segment open; no-op
-------	---

**TRNXYZ(PX,PY,PZ)**

"Translate (3-D origin by) XYZ (values)"

**Purpose**

Translates the 3-D world coordinate system to the specified point

**Inputs**

PX	X extent of translation
PY	Y extent of translation
PZ	Z extent of translation

**TXA1**

"Text (arguments in) A1 (format)"

**Purpose**

Specifies that subsequent text arguments are in A1 format (individual characters specified literally)

**TXADE**

"Text (arguments in) ADE (format)"

**Purpose**

Specifies that subsequent text arguments are defined by their ASCII decimal equivalents (default)

**TXAM**

"Text (arguments in) AM (format)"

**Purpose**

Specifies that text arguments are in AM format (literal strings)

**TXANGL(PANGLE)**

"Text angle"

**Purpose**

Establishes angle of line of text; (0.0) is the default

**Inputs**

PANGLE            Angle at which text is to be displayed

**Note**

Requires device capable of rotating text or Graphics Text Emulation (Option 3D)

**TXBOTH**

"Text (justified to) both (margins)"

**Purpose**

Declares that text be justified to both margins

**Note**

Only affects environment of TYPSET routine

**TXCENT**

"Text centered"

**Purpose**

Declares that text be centered on the line

**TXCONS**

"Text (spacing) constant"

**Purpose**

Sets constant spacing of text regardless of width of each character; this is the default

**TXESC(ICHAR)**

"Text escape (character)"

**Purpose**

Defines the command character to be used for TYPSET

**Inputs**

ICHAR            Desired command character in current user format; the default is ! (ADE 33)

**Errors**

14501            ADE values (ICHAR) cannot be < 0; no-op

**Note**

Only affects environment of TYPSET routine

**TXFCUR(IPOS)**

"Text final cursor (position)"

**Purpose**

Establishes location of the cursor after a line of text is displayed

**Inputs**

IPOS            Specifies cursor position after line of text is output

1

Cursor returns to a position one line width below the initial cursor position; simulates a carriage return/linefeed

2

Cursor is left at a position one inter-character gap after the last character output; this is the default

3

Cursor returns to the initial position

**Errors**

13501            IPOS out of range (1,3); no-op

## TXFONT(IFONT)

"Text font"

### Purpose

Selects a character font

### Inputs

IFONT                      Font number, selected from a list of available fonts (see Figures 5 and 6 and Table 6) (default: 0)

### Note

Requires device capable of displaying text in more than one font or Graphics Text Emulation (Option 3D) and English Character Fonts (Option 2B) or Math and Special Symbol Fonts (Option 2C)

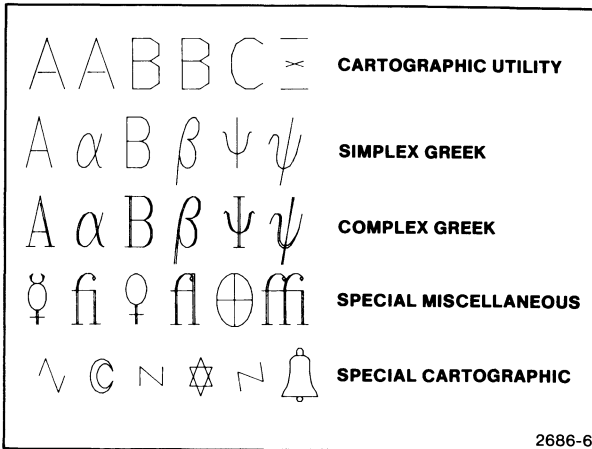

Figure 5. Sample Characters from Math and Special Symbol Fonts (Option 2C).

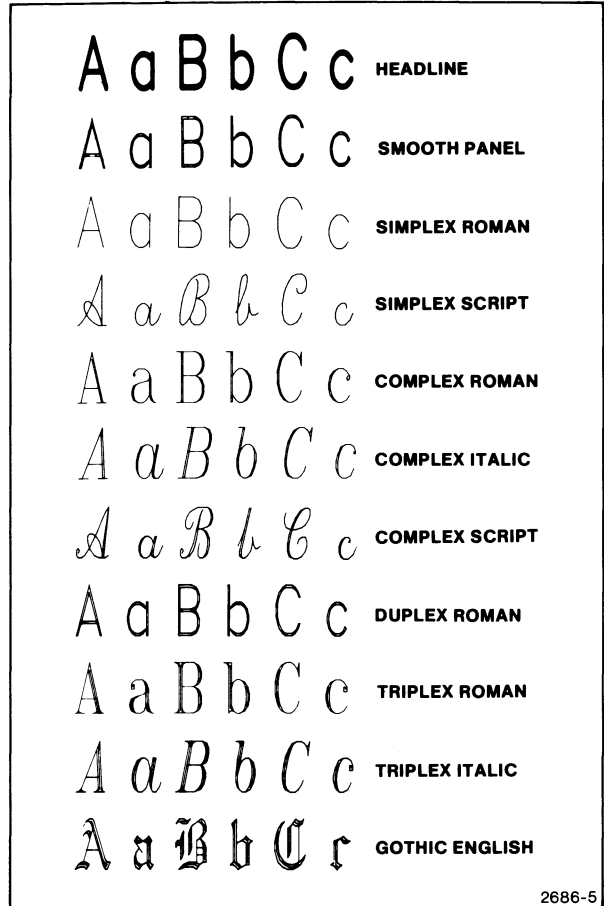

Figure 6. Sample Characters from English Character Fonts (Option 2B).

**TXGAP(PXGAP,PYGAP)**

"Text gap"

**Purpose**

Specifies the inter-character and inter-line gaps as ratios of current character size

**Inputs**

PXGAP Ratio of the character cell width (Figure 7c) to the character width (Figure 7a); default is 14.0/11.0. A value less than or equal to -99.0 implies hardware default gap ratio (see Table 14)

PYGAP Ratio of the character cell height (Figure 7f) to the character height (Figure 7d); default is 22.0/14.0. A value less than or equal to -99.0 implies hardware gap ratio

Figure 7. Character Cell.

Table 14

**DEFAULT TEXT GAPS**

Series Device	PXGAP	PYGAP
4010	14.0/11.0	22.0/14.0
4020	8.0/7.0	14.0/9.0
4112/13	14.0/9.75	21.0/13.0
4114	14.0/10.0	23.0/15.0
4660	9.0/6.0	20.0/11.0

**TXICUR(IPOS)**

"Text initial cursor (position)"

**Purpose**

Establishes the relationship of text output to the initial cursor position (see Figure 8)

**Inputs**

IPOS Set to an integer from 1-9 to specify the position of text in relation to the initial cursor position; the default is 1

**Errors**

13401 IPOS out of range (1,9); no-op

**TXLEFT**

"Text left (justified)"

**Purpose**

Declares that text be left-justified on the line against the left margin; this is the default

**Note**

Only affects environment of TYPSET routine

Figure 8. Text Positioning with TXICUR.

**TXPROP**

"Text (spacing) proportional"

**Purpose**

Sets proportional spacing of text based on width of each character

**TXQUAL(IQUAL)**

"Text quality"

**Purpose**

Sets quality level of character generation

**Inputs**

IQUAL	Text quality level
1	Text is output in hardware-generated font; prompting strings are always output at this level; appears in monitor or dialog area
2	Hardware implements those text specifications (such as size, rotation, and slant) that it can; no emulation is used. This is the default for users who don't have Graphics Text Emulation and/or Composer; represents GSPC (Graphic Standards Planning Committee of ACM/SIGGRAPH, 1979) character precision text
3	Hardware implements those text specifications that it can; software emulation is used if the hardware is not able. This is the default for users who have Graphics Text Emulation and/or Composer; represents GSPC Stroke precision text. Only available to users with Graphics Text Emulation
4	All text specifications are emulated by software, regardless of hardware capabilities; only available to users with Graphics Text Emulation

**Errors**

13001	IQUAL out of range (1,4); no-op
13021	Emulation not available; IQUAL set to 2

**Note**

IPOS values of 3 and 4 require Graphics Text Emulation (Option 3D) and/or Graphics Text Composer (Option 4D)

**TXRITE**

"Text right (justified)"

**Purpose**

Declares that text be right-justified on the line against the right margin

**Note**

Only affects environment of TYPSET routine

**TXSCRN**

"Text (in) screen (coordinate system)"

**Purpose**

Interprets text environmentals in viewport; this is the default. Text is not affected by modeling transforms

**TXSIZE(ISIZE,PXSIZE,PYSIZE)**

"Text size"

**Purpose**

Establishes size of characters

**Inputs**

**ISIZE** Indicates whether character size is defined by PXSIZE and PYSIZE, or if a hardware character size is used (see Table 15)

0 Specifies that character size is set by PXSIZE and PYSIZE; if PXSIZE and PYSIZE are also 0.0, you get the default hardware size (i.e., same effect as ISIZE= 1)

1 Specifies the default character size of the device

2-n Specifies the desired hardware character size or scale factor

**PXSIZE** Width of characters, given in current display surface units. Set to 0.0 if IGL is to calculate a PXSIZE proportionate (width/height of default hardware character set) to the given PYSIZE

**PYSIZE** Height of characters, given in current coordinate system (screen or world). Set to 0.0 if IGL is to calculate a PYSIZE proportionate (height/width of default hardware character set) to the given PXSIZE

**Errors**

14101 ISIZE &lt; 0; no-op

**Note**

Requires device capable of changing text size or Graphics Text Emulation (Option 3D)

**TXSLNT(PANGLE)**

"Text slant"

**Purpose**

Controls slant of text output

**Inputs**

**PANGLE** Specifies angle at which text is to be slanted from vertical (0°); text slanted to right if positive

**Errors**

13201 PANGLE set to multiple of 90.0°; no-op

**Note**

Requires device capable of slanting text or Graphics Text Emulation (Option 3D)

**TXTCOLOR(ICOLOR)**

"Text color"

**Purpose**

Sets text color

**Inputs**

**ICOLOR** Index number of selected color

**Note**

Requires device capable of displaying color

**TXWORL**

"Text (in) world (coordinate system)"

**Purpose**

Interprets text environmentals in world coordinate system and causes text to be affected by subsequently-specified modeling transforms

**TYPSET(ICOUNT,IARRAY)**

"Typeset"

**Purpose**

Displays text using in-string commands (see Table 16)

**Inputs**

**ICOUNT** Length of string to display

**IARRAY(ICOUNT)** String to display, in current text format

**Errors**

03721 World text being used with degenerate transform; abort

03722 TYPSET command string too long for "sysgened" workspace; will use "sysgened" buffer size: report

TYPSET's in-string commands almost always have the following format: a command character, a three letter mnemonic, an optional numeric argument, and a command terminator. An example would be !LIN3;, where the command character is !, LIN is the command, 3 is the numeric argument, and ; is the command terminator. (A semicolon is always acceptable as a command terminator and will always be considered part of the command.) The exception is the END command, which will be executed whether it is followed by a terminator or not.

**TYPSIZ(ICOUNT,IARRAY,ITERM,ILSTCH)**

“(Calculate) type size”

**Purpose**

Determines how much of text input in TYPSET will fit on the current text line

**Inputs**

ICOUNT            Number of command and text characters to look at  
IARRAY(ICOUNT)   Array of command and text characters

**Outputs**

ITERM            Indicates if a line terminator was found  
0                No terminator  
1                !LIN < command terminator>  
2                !HOM < command terminator>  
14               !RIT < command terminator>  
15               !LEF < command terminator>  
16               !CEN < command terminator>  
17               !BOT < command terminator>  
ILSTCH           Index into IARRAY indicating the last character that will fit on the current text line

**Note**

Only affects environment of TYPSET routine

**VALOF(IVAL)**

“Value of (an environmental parameter)”

**Purpose**

Returns the value of an IGL environmental parameter

**Inputs**

IVAL             An integer representing the environmental parameter to be returned (see Table 17)

**Outputs**

VALOF           The value of the requested parameter (returned as a real number)

**Errors**

03801            IVAL out of range (0.0 returned)  
03802            IVAL out of range for fancy text

**Note**

VALOF is a FUNCTION and not a subroutine

**VECABS**

“Vectors absolute”

**Purpose**

Declares that subsequent coordinates are absolute (relative to the origin); this is the default

**VECREL**

“Vectors relative”

**Purpose**

Declares that subsequent coordinates are relative to the cursor position

**VIEWT**

“Viewing transform”

**Purpose**

Specifies that subsequent scaling, rotation, and translation transforms should occur only at the viewing surface

**VPDIST(PDIST)**

“View plane distance”

**Purpose**

Specifies the distance between the view reference point and the view plane along the view plane normal

**Inputs**

PDIST            Distance from the VRP to the VP (default: 0.0)

**Errors**

06421            Illegal to modify viewing environment with retained segment open; no-op

**VPN3D(PX,PY,PZ)**

“View plane normal 3-D”

**Purpose**

Determines a vector (in world coordinate units) relative to the view reference point which defines the view plane orientation

**Inputs**

PX                X coordinate of the view plan normal (default: 0.0)  
PY                Y coordinate of the view plan normal (default: 0.0)  
PZ                Z coordinate of the view plan normal (default: -1.0)

**Error**

06101            PX= PY= PZ= 0, cannot define VPN; no-op  
06121            Illegal to modify viewing environment with retained segment open; no-op

**VRP3D(PX,PY,PZ)**

"View reference point 3-D"

**Purpose**

Defines the view reference point (VRP)

**Inputs**

PX X coordinate of the view reference point (default: 0.0)  
 PY Y coordinate of the view reference point (default: 0.0)  
 PZ Z coordinate of the view reference point (default: 0.0)

**Error**

06321 Illegal to modify viewing environment with retained segment open; no-op

**VUP3D(PTXYZ,PHXYZ)**

"(Define) view up 3-D (vector)"

**Purpose**

Defines the view up vector

**Inputs**

PTXYZ The point which is the tail (origin) of the directed line segment (default: 0.0, 0.0, 0.0)  
 PHXYZ The point which is the head (destination) of the directed line segment (default: 0.0, 1.0, 0.0)

**Errors**

05921 Null view up vector; no-op  
 05931 Illegal to modify viewing environment with retained segment open; no-op

**VWPORT(XMIN,XMAX,YMIN,YMAX)**

"Viewport"

**Purpose**

Defines, in display surface units, extent of the display surface on which output is to be displayed; default is entire display surface of output device

**Inputs**

XMIN Minimum X coordinate of viewport  
 XMAX Maximum X coordinate of viewport  
 YMIN Minimum Y coordinate of viewport  
 YMAX Maximum Y coordinate of viewport

**Errors**

05121 Minimum coordinate greater than or equal to corresponding maximum coordinate; no-op  
 05122 A viewport corner is outside device limits; no-op  
 05123 Illegal to modify viewing with ret. seg open; no-op

**VWPT3D(PXMIN,PXMAX,PYMIN,PYMAX,PZMIN,PZMAX)**

"Viewport 3-D"

**Purpose**

Specifies the extents of the 3-D viewport in the viewport coordinate system; the default X and Y extents are the entire display surface area, the default Z extent is 0.0 to 100.0 world units

**Inputs**

PXMIN Minimum X coordinate of viewport  
 PXMAX Maximum X coordinate of viewport  
 PYMIN Minimum Y coordinate of viewport  
 PYMAX Maximum Y coordinate of viewport  
 PZMIN Minimum Z coordinate of viewport  
 PZMAX Maximum Z coordinate of viewport

**Errors**

10021 One of the maximums is less than or equal to minimum coordinate; no-op  
 10022 Viewport corner is outside device limits; no-op  
 10023 Illegal to modify viewing environment with retained segment open; no-op

**W22NDC(XWORLD,YWORLD,XNDC,YNDC)**

“(Convert) world 2-D (coordinates) to NDC’s”

**Purpose**

Converts 2-D world coordinates to normalized device coordinates (NDC’s)

**Inputs**

XWORLD X-axis world coordinate to be converted  
YWORLD Y-axis world coordinate to be converted

**Outputs**

XNDC X-axis NDC coordinate  
YNDC Y-axis NDC coordinate

**W32BB(POINT,PXGDU,PYGDU)**

“World 3-D to billboard”

**Purpose**

Transforms a point in 3-D world space onto the billboard

**Inputs**

POINT(3) (X,Y,Z) point in world space

**Outputs**

PXGDU X coordinate of the point transformed into  
2-D GDU space  
PYGDU Y coordinate of the point transformed into  
2-D GDU space

**Errors**

29821 Billboard not defined; no-op

**W32NDC(XWORLD,YWORLD,ZWORLD,XNDC,  
YNDC,ZNDC)**

“(Convert) world 3-D (coordinates) to NDC’s”

**Purpose**

Converts 3-D world coordinates to 3-D normalized device coordinates (NDC’s)

**Inputs**

XWORLD X-axis world coordinate to be converted  
YWORLD Y-axis world coordinate to be converted  
ZWORLD Z-axis world coordinate to be converted

**Outputs**

XNDC X-axis NDC coordinate  
YNDC Y-axis NDC coordinate  
ZNDC Z-axis NDC coordinate

**WAIT1X**

“Wait (for a 4110 Series terminal response)”

**Purpose**

Waits until the terminal has processed all commands in the queue

**WHERE3D(PX,PY,PZ)**

“Where (is the cursor or plotter pen in) 3-D?”

**Purpose**

Returns the location of the (unclipped) cursor or plotter pen in the 3-D world coordinate system

**Outputs**

PX X coordinate of cursor or pen location  
PY Y coordinate of cursor or pen location  
PZ Z coordinate of cursor or pen location

**WHERE(PX,PY)**

“Where (is the cursor or plotter pen)?”

**Purpose**

Returns the location of the cursor or plotter pen in world space units

**Outputs**

PX X coordinate of cursor or pen location  
PY Y coordinate of cursor or pen location

**WINCLP(QVALUE)**

“Window clipping (on or off)”

**Purpose**

Specifies whether subsequent graphics will be clipped at the world coordinate system window

**Inputs**

QVALUE  
.TRUE. Initiates clipping of primitives at the  
window boundary (default)  
.FALSE. Ends window clipping

**Errors**

04921 Cannot change viewing while a segment  
is open; no-op

**WIND3D(PUMN,PUMX,PVMN,PVMX,PFRT, PBACK)**

"Window 3-D"

**Purpose**

Specifies the dimensions of the 3-D window in the UV system

**Inputs**

PUMN	Minimum U coordinate
PUMX	Maximum U coordinate
PVMN	Minimum V coordinate
PVMX	Maximum V coordinate
PFRT	Location of front clipping plane
PBACK	Location of back clipping plane

**Errors**

10121	Illegal to modify viewing environment with retained segment open; no-op
10131	Maximum coordinate less than or equal to corresponding minimum coordinate; no-op

**WINDOW(XMIN,XMAX,YMIN,YMAX)**

"Window"

**Purpose**

Specifies the portion of the coordinate system to be viewed

**Inputs**

XMIN	Minimum X coordinate of window
XMAX	Maximum X coordinate of window
YMIN	Minimum Y coordinate of window
YMAX	Maximum Y coordinate of window

**Errors**

05021	Minimum coordinate equals maximum coordinate; no-op
05031	Illegal to modify viewing with ret. seg open; no-op

**WRPHDR(ICHN,IHTYPE,ICNT,IPARMS)**

"Write picture (file) header"

**Purpose**

Writes a header to a pixel data file

**Inputs**

ICHN	The channel number of the file to be read
IHTYPE	Header type
1	Standard header
2	Color model header
ICNT	The count of parameter values in the header

**IPARMS**

IPARMS(1)	Number of bits per pixel
IPARMS(2)	XMIN of pixel viewport
IPARMS(3)	YMAX of pixel viewport
IPARMS(4)	YMIN of pixel viewport
IPARMS(5)	YMAX of pixel viewport

**Errors**

18351	ICHN out of range (1,8); no-op
18352	Invalid IHTYPE; no-op
18353	ICNT less than 5; no-op
18354	Invalid element in IPARMS; abort
18371	ICHN is not a sequential write file; abort

**WTFONT(IFNAM,IFILSZ,IFFNO,IFONT)**

"Write font"

**Purpose**

Writes a font from local font storage to a permanent host file

**Inputs**

IFNAM(6) Name of host file, specified in current text format (ADE, A1, or AM)

IFILSZ Size of host file to which font is to be written; specified in terms of 20-word records

IFFNO Identification number of font in local storage

IFONT Identification number assigned to the font in the new host file

**Errors**

03003 Input font number (IFFNO) out of user-defined range; no-op

03004 Output font number (IFONT) out of user-defined range; no-op

03021 Font (IFFNO) not defined; no-op

03022 Font integrity error (incorrect font header identification); abort

03023 No host communication channels available; no-op

03031 Font integrity error (incorrect font pointer table termination code); no-op

03032 Font integrity error (incorrect font header termination code); no-op

03033 Font integrity error (incorrect character termination code); no-op

**XPROC(INMPRO)**

"Execute a (downloaded) procedure"

**Purpose**

Executes a downloadable procedure definition

**Inputs**

INMPRO The downloadable procedure number to be expanded (0,255)

**Errors**

21451 INMPRO out of range (0,255); no-op

21471 Downloadable procedures not present on device; no-op

**XYPR1X(PX,PY,IBUF)**

"(Encode a real) 4110 series terminal X,Y pair"

**Purpose**

Places a 4110 Series X,Y coordinate pair in the terminal command buffer

**Inputs**

PX The X coordinates (in GDU's) to be encoded

PY The Y coordinate (in GDU's) to be encoded

IBUF The terminal command buffer

**Outputs**

IBUF Updated terminal command buffer

**Errors**

11551 X parameter out of range ; no-op

11552 Y parameter out of range ; no-op

11553 Terminal command buffer too small for data; no-op

**XYPR63(PX,PY,IBUF)**

"(Encode a) real 4663 X,Y pair"

**Purpose**

Converts an X,Y coordinate pair to ADE format and put the pair into the plotter command buffer; enough room must be provided for all the ADE values plus the decimal points and comma, in addition to the regular buffer overhead; see the user's manual for buffer size information.

**Inputs**

PX The X coordinate for a move or draw

PY The Y coordinate for a move or draw

IBUF The plotter command buffer

**Outputs**

IBUF The updated plotter command buffer

**Errors**

20551 IBUF too small to translate X and Y value to ADE; no-op

20552 IBUF too small to translate Y value to ADE; no-op

## ZOOM(PXMIN,PXMAX,PYMIN,PYMAX)

“(Host computer) zoom (and pan)”

### Purpose

Zooms and pans in the current view

### Inputs

**PXMIN** The minimum X coordinate (in world units) of the area to be zoomed

**PXMAX** The maximum X coordinate (in world units) of the area to be zoomed

**PYMIN** The minimum Y coordinate (in world units) of the area to be zoomed

**PYMAX** The maximum Y coordinate (in world units) of the area to be zoomed

### Errors

17051 PXMIN is not within the window; no-op

17052 PXMAX is not within the window; no-op

17053 PYMIN is not within the window; no-op

17054 PYMAX is not within the window; no-op

17071 No zoom/pan capabilities on this device; no-op

17072 PXMIN greater than or equal to PXMAX; no-op

17073 PYMIN greater than or equal to PYMAX; no-op

17074 Cannot zoom with open segment; no-op

### Note

Requires device with ZOOM feature

## ZPERSP

“Z-axis perspective projection”

### Purpose

Specifies 3-D Z-axis perspective projection

### Errors

05621 Illegal to modify viewing environment with retained segment open; no-op

Table 15  
CHARACTER CELL SIZES (IN GDUS)  
IN TEKTRONIX DEVICES

Device, Option	Font Size	Width	ICD <sup>a</sup>	CW <sup>b</sup>	Height	ILD <sup>c</sup>	CH <sup>d</sup>
4006,1	-	1.410	0.385	1.795	1.795	1.026	2.821
4010,1	-	1.410	0.385	1.795	1.795	1.026	2.821
4012/13,1	-	1.410	0.385	1.795	1.795	1.026	2.821
4012/13,2	1	1.410	0.385	1.795	1.795	1.026	2.821
	2	0.804	0.219	1.023	1.023	0.585	1.608
4014/4015,1	1	1.410	0.385	1.795	1.795	1.026	2.821
4016,2	2	1.283	0.350	1.633	1.633	0.933	2.566
	3	0.856	0.233	1.089	1.089	0.623	1.712
	4	0.776	0.212	0.988	0.987	0.564	1.551

	4	0.582	0.159	0.741	0.741	0.424	1.165
4025/27 ("A" versions also)	-	1.667	0.238	1.905	2.143	1.190	3.333
4112	Default	1.440	.480	1.920	1.920	1.181	3.101
4113	Default	1.440	.480	1.920	1.920	1.181	3.101
4114	Default	1.282	.513	1.795	1.923	1.026	2.949
4662 <sup>e</sup>	-	1.367	0.684	2.051	1.969	1.253	3.222
4663							

Character cell dimensions vary with different aspect ratios. See the 4663 Programmer's Reference Manual for aspect ratio/cell dimension information

<sup>a</sup>Inter-character distance

<sup>b</sup>Character cell width (width + ICD)

<sup>c</sup>Inter-line character distance

<sup>d</sup>Character cell height (height + ILD)

<sup>e</sup>Default for RS-232 I/F

**Table 16**  
**TYPSET COMMAND FUNCTIONS**

LIN< real>	Moves down < real> character heights, mimicking the effect of a carriage return/line feed. If the real value is negative or zero, it will be appropriately interpreted. For example, -1.0 reverses the line feed, 0.0 overwrites the current line. The default is 1.0
HOM< real>	Goes to the "home" position on the page, as defined by a call to MARGIN. The argument specifies the number of lines to move down from the "home" position. The default is that the first text line appears one line feed below the "home" point. See MARGIN.
LEF	Changes to left justification (see MARGIN and TXLEFT); this is the default.
RIT	Changes to right justification (see MARGIN and TXRITE).
CEN	Changes to center justification (see MARGIN and TXCENT).
BOT	Changes to both right and left justification (see MARGIN and TXBOTH).
FNT< int>	Changes to the IGL font number specified; FNT is equivalent to TXFONT and affects the rest of the IGL text environment.
SCA< real>	Scales current character width and height by the value given. SCA is similar but not identical to SCALE, which has separate arguments for scaling on the X- and Y-axes. Calling SCA affects the IGL text environment. An argument of 0.0 returns the default hardware character size.
SLT< real>	Changes the character slant to the value given. Multiple calls are not additive.
CLR< int>	Changes the text color to the color designated by the value given (as specified by CLRMAP — see the IGL User's Manual). CLR acts like TXTCLR.

**Table 16 (cont)**  
**TYPSET COMMAND FUNCTIONS**

ADE< int>	Outputs the ADE character specified by the value given in the current text font.
SET< int>	Sets tab stop to the current cursor position. The integer value following SET must be in the range 1 to the ***NUMBER-OF-TABS***. By default the upper end of the range is 20, but this may be altered at installation; check with your system programmer. The default tab stop is 1. See the Graphics Text Composer (Option 4D) User's Manual for discussion about how to use SET with SUB and SUP.
TAB< int>	Moves to tab stop and forces the first character of the string to start right at the tab stop. The default is 1. IRT and CEN will justify only the portion of a text string prior to an embedded TAB. Text following a TAB is left-justified to the tab stop. See TXBOTH in the Graphics Text Composer (Option 4D) User's Manual for discussion of its interaction with TAB.
UND< int>	Draws an underline. If the argument is a positive integer, one inter-character gap is subtracted from the end of the string to be underlined before the UND command is executed. If the argument is negative, the string is underlined from the tab stop to the current cursor position.
SUB	Changes to subscripting mode until further notice. Later subscripting and superscripting commands are additive. This command appropriately positions and scales characters.
SUP	Changes to superscripting mode until further notice. Later superscripting and subscripting commands are additive. This command appropriately positions and scales characters.
BAK< int>	Backs off < int> levels of subscripting and superscripting. The default is 1. TYPSET cannot back off more levels than specified by SUB and/or by SUP.

**Table 16 (cont)**

**TYPSET COMMAND FUNCTIONS**

**END**

END signals the end of the string but is not a line terminator. It is a buffer command, and its use alone does not output your input string.

END may be used to circumvent the TYPSET argument ICOUNT. If your host computer/compiler does not do much run time checking of array declarations, it may be convenient to input a very large number for ICOUNT and type an END command at the end of the buffer.

For example: CALL TYPSET(32000,'TEXT .. <C>END;')

where <C> equals a command character.

**Table 17**

**VALUES RETURNED BY VALOF**

**IVAL INFORMATION RETURNED**

- |    |  |  |
|----|--|--|
| 1  | Device number                              | (4010, 4025, etc.)                                       |
| 2  | Device option                              |  |
| 3  | Line color                                 |  |
| 4  | Dash pattern                               |  |
| 5  | Background color                           |  |
| 6  | Text format                                | (1 = ADE; 2 = A1; 3 = AM)                                |
| 7  | TXICUR value                               |  |
| 8  | TXFCUR value                               | (1 = CRF; 2 = Concat.; 3 = Back to initial position)     |
| 9  | Text color                                 |  |
| 10 | Text font number                           |  |
| 11 | Text quality                               |  |
| 12 | Maximum hardware dash pattern available    |  |
| 13 | Matrix premultiplication flag              | (0 = No; 1 = Yes)  |
| 14 | Relative vectors (1); absolute vectors (2) |  |
| 15 | Viewport Clipping                          | (0 = CLIP; 1 = NOCLIP)                                   |
| 16 | Skipping Flag                              | (0 = Next vector visible; SKIP has not been called)      |
| 17 | Remove/Appear                              | (0 = Foreground color lines; 1 = Background color lines) |
| 18 | Surface display unit conversion factor     | (user unit * factor = GDU's)                             |
| 19 | Angle unit conversion factor               | (user unit * factor = radians)                           |
| 20 | 2-D modeling pivot point X value           | (world units)  |
| 21 | 2-D modeling pivot point Y value           | (world units)  |
| 22 | 2-D window XMIN                            | (world units)  |
| 23 | 2-D window XMAX                            | (world units)  |
| 24 | 2-D window YMIN                            | (world units)  |
| 25 | 2-D window YMAX                            | (world units)  |
| 26 | 2-D viewport XMIN                          | (display surface units)                                  |
| 27 | 2-D viewport XMAX                          | (display surface units)                                  |
| 28 | 2-D viewport YMIN                          | (display surface units)                                  |
| 29 | 2-D viewport YMAX                          | (display surface units)                                  |
| 30 | 2-D clipping edge XMIN                     | (display surface units)                                  |
| 31 | 2-D clipping edge XMAX                     | (display surface units)                                  |
| 32 | 2-D clipping edge YMIN                     | (display surface units)                                  |
| 33 | 2-D clipping edge YMAX                     | (display surface units)                                  |

Table 17 (cont)

## VALUES RETURNED BY VALOF

34	Granularity	
35	Text line angle	(current angle units)
36	Text slant angle	(current angle units)
37	Text character width	(if TXWORL has been called, world units; otherwise screen units)
38	Text character height	(if TXWORL has been called, world units; otherwise screen units)

*With Graphic Text Emulation [Option 3D]*

39	Character spacing	(1 = proportional; 2 = constant)
40	TYPSET justification	(1 = left; 2 = center; 3 = right; 4 = both)
41	TYPSET escape character	(in current text format)
42	Marker font number	
43	Marker color	
44	Pen type for calligraphic fonts	(1 = ball; 2 = line)
45	Text world flag	(1 = world units; 2 = display surface units)
46	Text intercharacter gap	(as a fraction of width)
47	Text interline gap	(as a fraction of height)
48	TYPSET page upper left X coordinate	(world units)
49	TYPSET page upper left Y coordinate	(world units)
50	TYPSET page margin distance	(world units)
51	Calligraphic pen point size	(in 1/line height notation)

*With Line Smoothing [Option 4E]*

52	Open/closed polygons	(0 = open; 1 = closed)
53	Smoothing	(1 = on; 0 = off)

*With Panel Support [Option 4E]*

54	Current pattern map to use in filling panels	
55	Panel outlining	(0 = no; 1 = yes)
56	.TRUE. if device does panels	

Table 17 (cont)

## VALUES RETURNED BY VALOF

*With 3-D Graphics Support [Option 4B]*

57	Projection type	(1 = parallel; 2 = perspective)
58	Coordinate system polarity	(0 = right-handed; 1 = left-handed)
59	Viewing mode	(1 = Camera; 0 = Sig)
60	View volume side clipping	(0 = off; 1 = on)
61	Front plane view volume clipping	(0 = off; 1 = on)
62	Back plane view volume clipping	(0 = no; 1 = yes)
63	3-D pre-matrix multiplication flag	(0 = no; 1 = yes)
64	3-D pivot point X	(world units)
65	3-D pivot point Y	(world units)
66	3-D pivot point Z	(world units)
67	3-D axis of rotation X	(world units)
68	3-D axis of rotation Y	(world units)
69	3-D axis of rotation Z	(world units)
70	3-D clipping edge UMIN	(world units)
71	3-D clipping edge UMAX	(world units)
72	3-D clipping edge VMIN	(world units)
73	3-D clipping edge VMAX	(world units)
74	3-D viewport XMIN	(display surface units)
75	3-D viewport XMAX	(display surface units)
76	3-D viewport YMIN	(display surface units)
77	3-D viewport YMAX	(display surface units)
78	3-D viewport ZMIN	(display surface units)
79	3-D viewport ZMAX	(display surface units)
80	3-D window UMIN on viewplane	(world units)
81	3-D window UMAX on viewplane	(world units)
82	3-D window VMIN on viewplane	(world units)
83	3-D window VMAX on viewplane	(world units)
84	3-D window front distance	(world units)
85	3-D window back distance	(world units)
86	Billboard existence flag	(0 = no; 1 = yes)
87	Billboard point 1 X	(world units)
88	Billboard point 1 Y	(world units)
89	Billboard point 1 Z	(world units)

Table 17 (cont)

**VALUES RETURNED BY VALOF**

90	Billboard point 2 X	(world units)
91	Billboard point 2 Y	(world units)
92	Billboard point 2 Z	(world units)
93	Billboard point 3 X	(world units)
94	Billboard point 3 Y	(world units)
95	Billboard point 3 Z	(world units)
96	Back clipping plane distance	(world units)
97	Front clipping plane distance	(world units)
98	Center of projection (EYEBAL) X	(world units)
99	Center of projection (EYEBAL) Y	(world units)
100	Center of projection (EYEBAL) Z	(world units)
101	View plane distance	(world units)
102	View plane normal X	(world units)
103	View plane normal Y	(world units)
104	View plane normal Z	(world units)
105	View reference point X	(world units)
106	View reference point Y	(world units)
107	View reference point Z	(world units)
108	View up vector tail X	(world units)
109	View up vector tail Y	(world units)
110	View up vector tail Z	(world units)
111	View up vector head X	(world units)
112	View up vector head Y	(world units)
113	View up vector head Z	(world units)

*With Graphics Segment Support [Option 4A]*

114	Number of the open segment	(0 = temporary; 1 to 32767 = retained)
-----	----------------------------	---

**ERROR NUMBERS**

In Table 18, you can look up all error numbers associated with routines in this guide. Refer to the other tables in this section or the main alphabetical section for more information about each routine.

**Table 18**

## ROUTINES BY FUNCTIONAL CATEGORY

The routines in Table 19 are grouped by general functional similarity. If you know what general function a routine performs, but cannot remember the specific routine, look here to find it.

Table 19

## ROUTINES BY FUNCTIONAL CATEGORY

## System Environment Routines

BATCH	NEWDEV	SVEGRA
BAUDRT	OPNCAP	SVEMVS
CLOCAP	REPLAY	SVETRN
CMCLOS	REPORT	SVETXT
CMOPEN	RESTOR	SVEVVT
GRSTOP	SVE3TR	VALOF
GRSTRT	SVE3VW	
IERRNM	SVEALL	

## Segment Routines

ADDMBR	INQHIL	SET3PV

# TEKTRONIX COLOR STANDARD

In the **HLS** color coordinate system, the color space is represented as a double-ended cone.

The **HUE** coordinate runs counterclockwise around the cone. (0 to 360 degrees.)

The **LIGHTNESS** coordinate runs vertically up the cone. (0% to 100%.)

The **SATURATION** coordinate runs radially outward from the axis of the cone. The **SATURATION** coordinate is a percentage of the maximum possible saturation at a particular **LIGHTNESS** level. (0% to 100%.)

NOTE: For clarity, this figure shows the cone divided into only 64 colors, as in the TEKTRONIX 4027 terminal. The 4113 terminal has a wider repertory of color mixtures; for the 4113, the HLS cone is divided into 4096 distinct cells.
