PREFACE

Certain functions must be performed by the person responsible for the operation of an ETOS system. These include stopping, starting, and backing up the system. Some of these functions could be dangerous to system validity if performed by users, for instance, the deletion of all files in the common area. Consequently, this guide should not be distributed to users.

TABLE OF CONTENTS

ETOS SYSTEM ORGANIZATION

1.1	INTRODUCTION	1- 1
1.2	HARDWARE REQUIREMENTS	1- 1
1.3	DISK LAYOUT	1- 2
1.3.1	Layout for RK05 Disks	1- 3
1.3.2	Layout for System Industries Disks	1-10
1.4	MEMORY LAYOUT	1-17
1.5	MONITOR LAYOUT	1-17
1.6	REAL AND VIRTUAL OS/8	1-19
1.7	REAL AND VIRTUAL COS	1-45
1.8	CONVENTIONS USED IN THIS MANUAL	1-50

SYSTEM HARDWARE INSTALLATION

2.1	INTRODUCTION	2- 1
2.2	BOOTING RK05 ETOS DISK PACKS	2- 2
2.2.1	Booting With a Hardware Bootstrap	2- 2
2.2.2	Booting With a Front Panel	2- 2
2.2.3	Booting From a Non-RK05 Peripheral	2- 3
2.2.4	Booting on a DEC Data System	2- 4
2.3	BOOTING SYSTEM INDUSTRIES (SI) ETOS DISK PACKS	2- 5
2.3.1	Booting a Removable Pack with a Front Panel	2- 5
2.3.2	Booting a Removable Pack from a non-SI Peripheral	2- 7
2.3.3	Booting a Removable Pack on a DEC Data System	2- 9
2.3.4	Creating an ETOS Fixed Pack	2- 9
2.3.5	Booting a Fixed Pack on a PDP8E Processor, using the Front Panel	2-11
2.3.6	Booting a Fixed Pack on a PDP8A Processor, Using the Front Panel	2-12
2.3.7	Booting a Fixed Pack from a Non-SI Peripheral	2-14

2.3.8	Booting a Fixed Pack on a DEC Data System	2-16
2.4	FORMATTING A DISK PACK	2-16
2.4.1	Formatting an RK05 Pack	2-16
2.4.2	Formatting a System Industries Pack	2-18
2.5	COPYING ETOS PACKS	2-20
2.5.1	Copying An RK05 Disk Pack	2-21
2.5.2	Copying A System Industries Disk Pack	2-22
2.5.3	Copying The ETOS Distribution Pack Onto a Non-Disk Medium	2-24
2.6	BUILDING AN ETOS PACK FROM A NON-DISK DISTRIBUTION KIT MEDIUM	2-28
2.7	ENABLING TIME SHARING	2-30
2.8	ENABLING THE CLOCK	2-33
2.9	ENABLING THE LA8A LINE PRINTER	2-34
2.10	ENABLING PROPER TERMINAL CHARACTERISTICS	2-37
2.10.1	Parity	2-37
2.10.2	Stop Bits and filter	2-38
2.10.3	Fill Characters	2-40
2.11	TESTING THE ETOS BOARD	2-41
2.11.1	Installation of the ETOS Board	2-41
2.11.2	Hardware Requirements	2-41
2.11.3	Preliminary Diagnostic Programs	2-42
2.11.4	Operating Instructions	2-42
2.11.5	Diagnostic Action	2-44
2.11.6	Keyboard Options	2-44
2.11.7	Error Messages	2-45

CONFIGURING THE SYSTEM

3.1	INTRODUCTION	3- 1
3.2.	CONFIG OPERATING INSTRUCTIONS	3- 1
3.3	CLOCK OPTIONS	3- 7
3.4	LINE PRINTER OPTIONS	3- 9
3.5	ESME FEATURE OF THE ETOS [TSC8-75] MODULE	3-10
3.6	OPTION QUESTION IN START-UP PROCEDURE	3-11

3.7	AUTOMATIC START-UP	3-12
3.8	MEMORY CONFIGURATION	3-12
3.9	TERMINAL CONFIGURATION	3-13
3.10	FILLER CHARACTERISTICS	3-16
3.11	IGNORING SPECIAL CHARACTERS	3-17
3.12	UNDEFINED INTERRUPTS	3-18
3.13	TUNING THE ETOS SCHEDULER	3-19
3.14	TERMINAL BUFFERS	3-21
3.15	TERMINAL OUTPUT	3-22
3.16	TERMINAL INPUT	3-23
3.17	AUTOMATIC COMMAND LINE	3-24

START-UP OPTIONS

4.1	INTRODUCTION	4- 1
4.2	SYSGENING A PACK	4- 1
4.3	TRANSFERRING VIRTUAL OS/8	4- 4
4.3.1	Transferring Virtual OS/8 System Programs	4- 4
4.4	RETURNING TO STAND-ALONE OS/8	4- 6
4.5	STARTING ETOS FROM SINGLE-USER OS/8	4- 7
4.6	INITIALIZING THE SYSTEM TIME AND DATE	4- 8
4.7	STOPPING ETOS	4- 9

ETOS ACCOUNTS

5.1	INTRODUCTION	5- 1
5.2	ACCOUNT STRUCTURE	5- 2
5.2.1	Account Attributes	5- 3
5.2.2	ETOS File Attributes	5- 5
5.2.3	Initial Account List	5- 9
5.3	ACCNT PROGRAM	5- 9
5.3.1	Initiating The ACCNT Program	5-10
5.3.2	Available ACCNT Options	5-12
5.4	LISTING ACCOUNTS AND ETOS FILES	5-14
5.5	CREATING ACCOUNTS AND ETOS FILES	5-22
5.5.1	Creating an OS/8 Storage Area	5-28
5.5.2	Creating a COS Program Storage Area	5-31

5.5.3	Creating a COS Data File Storage Area	5-35
5.6	DELETING ACCOUNTS AND ETOS FILES	5-37
5.7	CHANGING ACCOUNT AND ETOS FILE ATTRIBUTES	5-39
5.8	CHANGING ETOS FILE LENGTHS	5-42
5.9	ADDITIONAL ACCNT INFORMATION	5-45
5.9.1	Input Conventions	5-45
5.9.2	Restrictions	5-48
5.9.3	ACCNT Error Messages	5-49
5.9.4	Enabling Other Consoles to Run ACCNT	5-53
5.9.5	Enabling Other Accounts to Run ACCNT	5-55
5.9.6	Specifying ACCNT Commands From an OS/8 Input File	5-56
5.9.7	Printing Output to an OS/8 Output File	5-58
5.10	ACCESSING A PRIVATE PACK	5-60
5.10.1	Accessing a Stand-alone OS/8 Pack	5-61
5.10.2	Accessing a Stand-alone COS Pack	5-64
5.10.3	Creating a Stand-alone OS/8 Pack	5-67
5.10.4	Creating a Stand-alone COS Pack	5-68
5.11	CREATING A PUBLIC PACK	5-69
5.11.1	Creating an OS/8 Storage Area	5-73
5.11.2	Creating a COS Program Storage Area	5-75
5.11.3	Creating a COS Data File Area	5-78
5.12	MOVING FILES BETWEEN VIRTUAL OS/8 AND ETOS	5-79
5.12.1	Loading SYSTAT	5-82
5.12.2	Loading DKCOPY	5-83
5.12.3	Loading LOGIN	5-84
5.12.4	Loading an Installation File	5-85
5.12.5	Loading a LOGIN Message	5-86
5.13	MOVING FILES BETWEEN ACCOUNTS	5-87
5.13.1	Moving Files Between OS/8 Storage Areas	5-90
5.13.2	Moving Programs Between COS Storage Areas	5-91
5.13.3	Moving Files Between COS Data File Areas	5-92
5.13.4	Moving Programs Between OS/8 and COS Storage Areas	5-93
5.13.5	Moving Files Between OS/8 Storage and COS	

Data File Areas	5-95
5.13.6 Moving Files Between Real and Virtual OS/8	5-96
5.13.7 Moving Files Between OS/8 Virtual SYS Storage and OS/8 Storage Areas	5-97
5.14 FACILITATING ETOS FILE ACCESS	5-98
5.14.1 Setting LOOKUP Defaults	5-101
5.14.2 Inhibiting LOOKUP Questions	5-102
5.15 ETOS SYSGEN ACCOUNTS	5-104
5.15.1 Master File Directory (Account [00,01])	5-104
5.15.2 Library (Account [00,02])	5-105
5.15.3 Operator's Account (Account [00,03])	5-109
5.16 DISTRIBUTION ACCOUNTS	5-112
5.16.1 Documentation (Account [00,04])	5-113
5.16.2 Differences (Account [00,05])	5-113
5.16.3 Device Handlers (Account [00,06])	5-114
5.16.4 ETOS Cusps (Account [00,07])	5-116
5.16.5 Assembly Language (Account [00,10])	5-117
5.16.6 Stand-Alone Software (Account [00,11])	5-119
 PRIVILEGED OPERATIONS	
6.1 INTRODUCTION	6- 1
6.2 PRIVILEGED SCALE COMMANDS	6- 1
6.2.1 PRIVilege Command	6- 2
6.2.2 PEEK and POKE Commands	6- 4
6.2.3 BROADCAST Command	6- 5
6.2.4 FORCE and ECROF Commands	6- 6
6.2.5 Write Lock and Write Enable Commands	6- 8
6.2.6 MOUNT and DISMOUNT Commands	6- 8
6.2.7 SHUTUP Command	6-11
6.3 PRIVILEGED SYSCAL FUNCTIONS	6-11
6.3.1 LOCK	6-11
6.3.2 UNLOCK	6-12
6.3.3 HOOK	6-12
6.3.4 UNHOOK	6-13
6.3.5 MOUNT	6-14

6.3.6	XTRAP	6-15
6.3.7	DISMNT	6-15
6.4	PRIVILEGED OS/8 FUNCTIONS	6-16
6.4.1	Changing Device Handlers in OS/8	6-17
6.4.2	TD8E DECTape	6-26
6.4.3	TC08 DECTape	6-27
6.4.4	RX01 Floppy Disk	6-28
6.4.5	PT8E High Speed Reader/Punch	6-28
6.4.6	User-written Device Handlers	6-29
6.4.7	Reading Binary Paper Tapes	6-37
6.4.8	Enabling CCL	6-37
6.4.9	Setting Terminal Characteristics	6-38
6.4.10	Setting Line Printer Characteristics	6-43
6.4.11	Setting General Device Characteristics	6-44
6.4.12	Setting Automatic LOGIN Batches	6-47
6.4.13	Line Printer and Terminal Spooling	6-55
6.4.14	Printing Cumulative Job Statistics	6-64
6.5	PRIVILEGED COS FUNCTIONS	6-73
6.5.1	RX01 Floppy Disk	6-73
6.5.2	VT05 and VT52 Scopes	6-74
6.6	ON-LINE BACKUP	6-75
6.7	TEMPORARY PRIVILEGE	6-82
ETOS REAL-TIME PROGRAMMING		
7.1	INTRODUCTION	7- 1
7.2	SAMPLE PROGRAM	7- 3
7.3	SYSTEM STRUCTURE	7- 6
7.4	SCHEDULING	7- 6
7.4.1	Levels	7- 6
7.4.2	Scheduling Algorithms	7- 7
7.5	MONITOR AND MEMORY ARCHITECTURE	7- 9
7.6	REAL-TIME TASKS	7-11
7.7	PRIVILEGED LEVEL 3 PROGRAMMING	7-12
7.8	REAL-TIME DEMONSTRATION	7-13

ERROR DIAGNOSIS

8.1	INTRODUCTION	8- 1
8.2	ADDITION AND REMOVAL OF TERMINALS	8- 2
8.3	RUNNING FROM NON-SYSTEM DRIVES	8- 5
8.4	DIAGNOSING DISK ERRORS	8- 7
8.4.1	RK05 Disk Errors	8- 7
8.4.2	System Industries Disk Errors	8- 8
8.4.3	Verifying Bad Disk Blocks	8-10
8.5	MFD AND UFD STRUCTURE	8-11
8.6	PRINTING FREE BLOCKS FILE	8-21
8.7	RECOVERY AFTER A CRASH	8-23
8.8	DEBUGGING THE MONITOR	8-26
8.9	EXAMINING PHYSICAL MEMORY	8-27
8.10	SOFTWARE PERFORMANCE REPORTS	8-28
8.11	TECHNICAL SUMMARIES	8-29
8.12	MEDIA MANAGEMENT	8-32
8.12.1	Entering SMRs	8-33
8.12.2	Maintaining the Production Pack	8-36

APPENDICES

APPENDIX A	-- Privileged Scale Commands	A- 1
APPENDIX B	-- SCALE Error Messages	B- 1
APPENDIX C	-- Glossary	C- 1
APPENDIX D	-- Technical Summary Letters	D- 1
D.1	INTRODUCTION	D- 1
APPENDIX E	-- Optional Patches	E- 1
E.1	INTRODUCTION	E- 1
E.2	SETTING LOGIN PRIVILEGE	E- 2
E.3	DISABLING CUMULATIVE STATISTICS FILES	E- 5
E.4	MAKING TALK COMMAND PRIVILEGED	E- 7
E.5	DISABLING CHANIO COMMANDS	E- 9
APPENDIX F	-- Mandatory Patches	F- 1
F.1	INTRODUCTION	F- 1
F.2	MANDATORY PATCH INDEX	F- 3
F.3	SOFTWARE MAINTENANCE REPORTS	F- 4

CHAPTER 1
ETOS SYSTEM ORGANIZATION

1.1 INTRODUCTION

This chapter is the first ETOS documentation you should read after the release notes. It explains some of the requirements and philosophy of the ETOS product. It also provides a comprehensive list of the licensed software which ETOS includes. This chapter should be understood before proceeding to Chapter 2. It is a basis for the entire system. No actual installation work is to be performed in this chapter. It is strictly a document to familiarize you with ETOS. The detailed installation is explained in Chapter 2.

1.2 HARDWARE REQUIREMENTS

QUODATA supports the following minimum configuration for ETOS Version 5B

- PDP-8/E, 8/F, 8/M or 8/A
- TSC8-75, time share control board
- 16K words of memory (32K words recommended)
- DK8-EA, DK8-EC, DK8-EP or DKC8-AA clock
- RK8E disk controller with one RK05 drive or
System Industries 30/40 controller with Diablo 44 disk drive
or Western Dynex 6000 disk drive
- backup medium (disk, DEctape, etc.)
- console terminal

LA180, LP05 or LP08 line printers, line printers interfaced to a DKC8-AA, KL8E, KL8JA or LS8E interface, OM200 or TM200 card readers, and almost any variety of terminal are supported by non-privileged (ETOS) OS/8 device handlers.

TD8E DECTapes, TC08 DECTapes, PT8E high speed reader/punch and RX01 floppy disk are supported by privileged (ETOS) OS/8 device handlers.

LA180, LP05 or LP08 line printers, line printers interfaced to a DKC8-AA, KL8E, KL8JA or LS8E interface, OM200 or TM200 card readers, and almost any variety of terminal are supported by non-privileged COS device handlers.

The RX01 floppy disk is supported by a privileged COS device handler.

1.3 DISK LAYOUT

ETOS is distributed on an RK05J or a removable System Industries compatible disk pack. ETOS can be run from an RK05 (F or J) pack or a fixed System Industries compatible disk pack.

The RK05F is equivalent to two RK05J drives and each RK05F is treated by the software as two drives. If one RK05F exists on the system, it is configured as drive 0 and 1. If two RK05F drives exist, they are configured as drive 0 and 1 and drive 2 and 3. A maximum of four RK05J drives (two RK05F drives) may be installed on the system for a total of 12.8 megabytes of storage.

The Western Dynex 6000 disk drive is compatible with the Diablo 44B drive. A maximum of two Western Dynex drives can be installed on the system for a total of 26.0 megabytes.

ETOS does not support a mix of RK05 and Western Dynex drives on the same system. Any transfer of files between the two types of drives must be performed under single user OS/8.

1.3.1 Layout For RK05 Disks

An RK05J disk drive utilizes a sixteen sector per track disk pack. Each pack contains 406 tracks (203 cylinders) for a total of 6496 (base 10 or 14540 base 8) sectors (blocks). Since each sector contains 256 12-bit words (512 characters), there is a total of 1,662,976 12 bit words (3,325,952 6 bit characters) on one disk pack. The transfer rate for this disk is 1.44 million bits per second. The rotational speed is 1500 RPM and the average latency is 20 MS. The ETOS software supports up to four RK05J disk drives, each containing a removable cartridge. The industry designation for this type of front-loading cartridge is a "2315" pack.

The pack which is used as an ETOS system disk has a dual identity in the sense that it can be used both in OS/8 single-user mode and ETOS mode. The ETOS monitor is loaded and executed via the R command of OS/8; that is, ETOS.SV is an executable program from OS/8. The ETOS pack is therefore booted with the standard OS/8 RK8E bootstrap (see 2.2). This bootstrap is identical to the standard COS RK8E bootstrap.

The ETOS cartridge is logically different from standard RK05 cartridges in the following ways.

1. The OS/8 single user monitor has device handlers built into it which are unique to the ETOS system. This monitor should not be copied to other standard OS/8 packs.

Copies of the resources (RES/E) for both the real OS/8 and the virtual OS/8 are provided in Table 1-1. In real OS/8, the SYS and DSK handlers are modified RK05 system handlers and the remaining handlers are the standard OS/8 device handlers. In virtual OS/8, all device handlers have been modified for maximum efficiency under ETOS.

If the device handlers for your peripherals are not enabled, you must run BUILD under OS/8 and ETOS to

enable them (see 6.4.1). The peripherals currently enabled under OS/8 are RK05J disk drives 0 and 1, TD8E DECTape drive 0, console terminal, low-speed paper tape reader/punch, high speed paper tape reader/punch, line printer and card reader. The peripherals currently enabled under ETOS OS/8 are the write-protected system area, channels 2-5, TD8E DECTape drive 0, RX01 floppy disk drives 0 and 1, user terminals, low speed paper tape reader/punch, line printer, spooler and card reader.

2. In virtual OS/8, the OS/8 CUSPs (Commonly Used System Programs) have been modified for use under ETOS. For this reason, the standard OS/8 CUSPs should never replace these programs. The operational differences between the standard OS/8 cusps and their ETOS versions are presented in 4.3, System User's Guide.
3. Standard OS/8 logically divides an RK8E/RK05 disk into two devices. Drive zero, then has available devices RKA0 and RKB0; drive one has RKA1 and RKB1, etc. Each RK05 has 14,540 (base 8) or 6496 (base 10) sectors (blocks). Blocks 0 through 6257 (base 8) are used for RKA0 (SYS) and blocks 6260 (base 8) through 14,537 (base 8) are for RKB0. The disk allocation for standard OS/8 is shown in Table 1-2.

The ETOS RK05 system disk allocation (see Table 1-3) differs in that there is no single user accessibility beyond block 1177 (base 8). In single user mode, the ETOS disk appears to the user to have 1200 (base 8) blocks, all allocated to the logical device SYS.

Under OS/8, the only difference between the allocation of system and non-system disks is that blocks 7 through 70 are used for file storage.

Under ETOS, non-system disks may be standard OS/8 or COS packs (private packs). If multi-user access on the pack is desired, an ETOS format (public) pack is used. The disk allocation for an ETOS public pack is shown in Table 1-4.

1.3.2 Layout For System Industries Disks

A System Industries (S.I.) drive utilizes one fixed and one removable disk pack of equal length. The packs contain sixteen sectors per track. Each pack contains 816 tracks (408 cylinders) for a total of 13,056 (base 10 or 31400 base 8) sectors (blocks). Since each sector contains 256 12-bit words (512 characters), there is a total of 3,342,336 12-bit words (6,684,672 6-bit characters) on one disk pack. The transfer rate for this disk is 2.50 million bits per second. The rotational speed is 2400 RPM and the average latency is 12.5 MS. The ETOS software supports up to two System Industries drives, each containing one fixed and one removable cartridge. The industry designation for the removable top-loading cartridge is a "2340" pack.

ETOS is distributed on a removable pack and copied onto the fixed pack in port 0 for operation of the system. After this copy, the fixed disk has a dual identity in the sense that it can be used in both OS/8 single-user mode and ETOS mode. The ETOS monitor is loaded and executed via the R command of OS/8; that is, ETOS.SV is an executable program from OS/8. The fixed pack is therefore booted with the standard OS/8 System Industries bootstrap (see 2.3).

The ETOS cartridge is logically different from standard System Industries cartridges in the following ways.

1. The OS/8 single user monitor has device handlers built into it which are unique to the ETOS system. This monitor should not be copied onto standard OS/8 packs.

Copies of the resources (RES/E) for both the real OS/8 and the virtual OS/8 are provided in Table 1-5. In real OS/8, the SYS and DSK handlers are modified System Industries system handlers and the remaining handlers are the standard OS/8 device handlers. In virtual OS/8, all device handlers have been modified for maximum efficiency under ETOS.

If the device handlers for your peripherals are not enabled, you must run BUILD under OS/8 and ETOS to enable them (see 6.4.1). The peripherals currently enabled under OS/8 are the fixed and removable packs in port 0, RK05J drive 0, console terminal, low-speed paper tape reader/punch, RX01 floppy disk drives 0 and 1, line printer and card reader. The peripherals currently enabled under ETOS OS/8 are the write-protected system area, channels 2-5, TD8E DECTape drive 0, RX01 floppy disk drives 0 and 1, user terminals, low speed paper tape reader/punch, line printer, spooler and card reader.

2. In virtual OS/8 the OS/8 CUSPs (Commonly Used System Programs) have been modified use under ETOS. For this reason, the standard OS/8 cusps should never replace these programs. The differences between standard OS/8 cusps and their ETOS versions are presented in 4.3, System User's Guide.
3. Standard OS/8 logically divides a System Industries disk into four devices. The fixed pack in port 0 has available devices DSK0, DSK1, DSK2 and DSK3; the removable pack in port 0 has available devices DSK4, DSK5, DSK6 and DSK 7. Each System Industries pack has 32054 (base 8) or 13,056 (base 10) sectors (blocks). The disk allocation for standard OS/8 is shown in Table 1-6.

The ETOS disk allocation (see Table 1-7) differs in that there is no single user accessibility beyond block 1177 (base 8). In single user mode, the ETOS disk appears to the user to have 1200 (base 8) blocks, all allocated as the logical system device (SYS).

Table 1-6
OS/8 S.I. System Disk Allocation

<u>Blocks</u>	<u>Use</u>
0	Bootstrap
1-6	Directory of DSK0 (SYS)
7-70	OS/8 monitor
71-6257	DSK0 file storage [3192 (base 10) blocks]
6260-6277	Unused
6300	Unused
6301-6306	Directory of DSK1
6307-14557	DSK1 file storage [3241 (base 10) blocks]
14560-14577	Unused
14600	Unused
14601-14606	Directory of DSK2
14607-23057	DSK2 file storage [3241 (base 10) blocks]
23060-23077	Unused
23100	Unused
23101-23106	Directory of DSK3
23107-31357	DSK3 file storage [3241 (base 10) blocks]
31360-31377	Unused

Table 1-7
ETOS S.I. System Disk Allocation

<u>Blocks (base 8)</u>	<u>Use</u>
0	Stand-alone OS/8 bootstrap
1-6	Directory of stand-alone SYS
7-67	OS/8 Monitor (This copy is a standard OS/8 Version 3 monitor with special device handlers for use with ETOS.)
70-1177	Stand-alone OS/8 file storage. Under ETOS, this area is referred to as the ETOS file OS8.OS8 under account [0,2].
1200	Master file directory. This directory consists of a list of user accounts and pointers to those accounts. This list is contained in the account [0,1] with an initial password of "PASSWORD".
1201	Map for the Master File Directory (MFD).
1202	Map for the operator's user file directory [0,3].
1203	Map for the library account [0,2].
1204-1205	Operator's user file directory [0,3].
1206	Library user file directory [0,2].
1207	Map for virtual OS/8 ([0,2]OS8.RTS).
1210-1220	LOGIN program [0,2]LOGIN.SAV.
1221-1260	List of available blocks on the disk. This list is contained in the ETOS file [0,2]FREEBLO.CKS.
1261-1277	Free blocks for ETOS files.
1300-n	Free blocks for line printer spooling and account storage. The size of this region is dependent on the response to the question "NUMBER OF SWAP TRACKS?" in the SYSGEN option. On a standard distribution pack, this area extends from block 1300 (base 8) to block 3015 (base 8).

Table 1-7 (continued)

<u>Blocks (base 8)</u>	<u>Use</u>
n+1-6237	Swap tracks for all users. The size of this region is dependent on the response to the question "NUMBER OF SWAP TRACKS?" in the SYSGEN question. The number of blocks in this file is equal to the (number of swap tracks plus four) multiplied by thirty-two. The swap tracks are contained in the ETOS file [0,2]SWAPTRA.CKS.
6240-6327	Virtual OS/8 system head [0,2]OS8.RTS. Under ETOS, this area is public and accessible by all users as a read-only device. Privileged users have write capabilities. This area may be REDUCED (see 5.8).
6330-6357	System scratch blocks for job number 3 ([0,3]JOB03.SBK).
6360-6407	System scratch blocks for job number 4 ([0,3]JOB04.SBK).
6410-6437	System scratch blocks for job number 5 ([0,3]JOB05.SBK).
6440-7077	System scratch blocks for jobs 6 - 21.
7100-7127	System scratch blocks for job number 22 ([0,3]JOB22.SBK).
7130-12337	Remainder of virtual OS/8 (blocks 70-3277).
12340-31377	Free blocks for ETOS files.

Table 1-8
ETOS S.I. Public Disk Allocation

<u>Blocks (base 8)</u>	<u>Use</u>
0	Unused.
1	Master file directory. This directory consists of a list of user accounts and pointers to these accounts. This list is contained in the account [0,1] with an initial password of "PASSWORD".
2	Map for the Master file directory (MFD).
3	Map for the library account [0,2].
4	Library's user file directory.
5-44	List of available blocks on the disk. This list is contained in the ETOS file [0,2]FREEBLO.CKS.
45-31377	Free blocks for ETOS files.

1.4 MEMORY LAYOUT

The first 4K words (field 0) of the main memory is occupied by the resident monitor (RMON). RMON controls the operation of the total system. It is the heart of the monitor in the sense that nothing can function without it.

The second 4K words (field 1) of memory is used primarily for system tables and free core. Free core is composed of buffers which are dynamically used by the monitor to transfer data to and from user programs and devices.

Any remaining memory is used for user programs. An additional 8K, at least, must be available for the monitor to run the disk monitor (DMON) and the command processor (SCALE) nonresident monitor programs. There is an eight word core table which determines whether or not a field is available for use. This table can be set up by the user via the CONFIG program (see 3.8).

1.5 MONITOR LAYOUT

The monitor consists of four basic segments: RMON, KMON, DMON and SYSGEN. RMON is the resident monitor which occupies field 0 and 1 at all times. KMON is the keyboard monitor (SCALE) which is swapped into memory when needed. DMON is the disk monitor which is swapped into memory when needed. SYSGEN is utilized only when the initial ETOS option "Sysgen" is chosen. RMON and KMON are loaded together into a core image file. DMON is loaded into a second core image file. SYSGEN is loaded into a third core image file. These three core image files are merged with the "/I" option in PIP to create the monitor file ETOS.SV. The layout of this 165 block (base 8) or 118 block (base 10) file is contained in Table 1-7.

Table 1-9
ETOS Monitor Layout

<u>Blocks (base 8)</u>	<u>Use</u>
0	Core control block for RMON, KMON core image file
1-20	Field 1 of KMON (field 3 of RMON, KMON)
21-40	Field 0 of KMON (field 2 of RMON, KMON)
41-60	Field 1 of RMON and Initializer (field 1 of RMON, KMON)
61-100	Field 0 of RMON (field 0 of RMON, KMON)
101	Core control block for DMON core image file
102-121	Field 1 of DMON
122-141	Field 0 of DMON
142	Core control block for SYSGEN core image file
143-164	Field 3 of SYSGEN

1.6 REAL AND VIRTUAL OS/8

When the user first bootstraps the system, he is running in stand-alone mode. This is referred to as real OS/8. The CUSPs in this disk area are mostly unmodified OS/8 CUSPs. This area contains 1200 (base 8) blocks. It can be used to perform functions not supported under ETOS (i.e., formatting tapes). It may also be used to transfer programs to and from devices not supported under ETOS. If you want to transfer a program from cassette to ETOS, transfer the program to stand-alone OS/8. You then would start ETOS and transfer the program from real OS/8 to virtual OS/8 (see 5.13.6). Under stand-alone mode, real OS/8 is accessed as SYS. A copy of the real OS/8 system head is contained in the stand-alone file ETOSOS.SY. Under ETOS it is accessed as [0,2]OS8.OS8. The files distributed under stand-alone OS/8 are listed in Table 1-10.

Table 1-10
Stand-alone OS/8 Files

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
ABSLDR.SV	PAL8 ASSEMBLER. Loads binary programs into memory.	OS/8 Handbook	Page 1-108
BACKUP.SV	ETOS CUSP. Backs up system disk onto non- disk medium.	ETOS Mgr's Guide	2.5.3
BATCH.SV	OS/8 Extension Kit. Processes OS/8 or SCALE Commands from an OS/8 file.	OS/8 Handbook	Page 2-1

Table 1-10 (continued)

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
BOOT.SV	OS/8 CUSP. Boots stand- alone OS/8 on various peri- pherals.	OS/8 Handbook	Page 2-32
BUILD.SV	OS/8 CUSP. Changes active device handlers in stand-alone OS/8 system head.	OS/8 Handbook or ETOS Mgr's Guide	Page 2-34 6.4.1
CCL.SV	OS/8 CUSP. Concise command language which extends stand- alone OS/8 com- mand structure.	OS/8 Handbook	Page 1-52
CDUMP.SV	ETOS CUSP. Prints crash dump for pro- blem diagnosis.	ETOS Mgr's Guide	8.7
CONFIG.SV	ETOS CUSP. Configures ETOS for your hard- ware.	ETOS Mgr's Guide	Chapter 3
CREP.SV	OS/8 CUSP. Cross references PAL8 and SABR source code.	OS/8 Handbook	Page 2-69
DIRECT.SV	OS/8 CUSP. Lists directories of OS/8 peripherals.	OS/8 Handbook	Page 2-77
DTCOPY.SV	OS/8 CUSP. Copies TC08 DECTapes.	Maintenance TC08 DECTape Copy Documentation	
DTFRMT.SV	OS/8 CUSP. Formats TC08 DECTapes.	Maintenance TC08 DECTape Formatter Documen- tation	
EDIT.SV	OS/8 CUSP Creates ASCII files for use with COBOL, FORTRAN II, FORTRAN IV or PAL8.	OS/8 Handbook	Page 1-78

Table 1-10 (continued)

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
EPIC.SV	OS/8 CUSP. General purpose utility which compares, punches and modifies OS/8 mass storage.	OS/8 Handbook	Page 2-83
ETOS.SV	ETOS MONITOR. Controls time-sharing.	ETOS User's Guide ETOS Mgr's Guide	
ETOSSET.SY	VIRTUAL OS/8. OS/8 system head modified for ETOS.	ETOS Mgr's Guide	1.6
ETOSOS.SY	REAL OS/8. Stand-alone OS/8 system head for use with ETOS.	ETOS Mgr's Guide	1.6
FOTP.SV	OS/8 CUSP. Copies OS/8 files from one peripheral to another.	OS/8 Handbook	Page 2-97
FUTIL.SV	OS/8 CUSP. General purpose utility which enables you to examine and modify the contents of mass storage devices.	OS/8 Handbook Update	Appendix K
HELP.HL	OS/8 FILE. ASCII file which contains all HELP messages.	OS/8 Handbook Update	Page 11
HELP.SV	OS/8 CUSP. Prints HELP messages from HELP.HL file.	OS/8 Handbook Update	Page 11
INIT.CM	OS/8 FILE. Contains command executed when stand-alone OS/8 is bootstrapped and SET SYS INIT is enabled.	OS/8 Handbook Update	J.4.1

Table 1-10 (continued)

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
PAL8.SV	PAL 8 ASSEMBLER. Assembles absolute machine language code.	OS/8 Handbook	Chapter 3
PIP.SV	OS/8 CUSP. Transfers programs and system heads from one peri- pheral to another.	OS/8 Handbook	Page 1-97
RESORC.SV	OS/8 CUSP. Prints active device handlers in the stand-alone OS/8 system head.	OS/8 Handbook	Page 2-121
RKCOPY.SV	ETOS CUSP. Copies one RK05 disk pack to another RK05 disk pack.	ETOS Mgr's Guide	2.5.1
RKLFMT.SV	OS/8 CUSP. Formats RK05 disk packs.	ETOS Mgr's Guide	2.4.1
RXCOPY.SV	OS/8 CUSP. Copies one RX01 diskette to another RX01 diskette.	OS/8 Handbook Update	Appendix I
SET.SV	OS/8 CUSP. Sets OS/8 device attributes.	OS/8 Handbook Update	Appendix J
SICOPY.SV	ETOS CUSP. Copies one System Industries disk pack to another System Industries disk pack.	ETOS Mgr's Guide	2.5.2
TDCOPY.SV	OS/8 CUSP. Copies one TD8E DECTape to another TD8E DECTape.	Maintenance TD8E DECTape Copy documentation	

Table 1-10 (continued)

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
TDFRMT.SV	OS/8 CUSP. Formats TD8E DECTapes.	Maintenance TD8E DECTape Formatter documenta- tion	
TSC8.SV	ETOS CUSP. Diagnoses ETOS board (TSC8-75) for possible errors.	ETOS Mgr's Guide	2.11
XDDT.SV	ETOS CUSP. Allows on-line debugging of ETOS monitor.	ETOS Mgr's Guide	8.8
3040.SV	SYSTEM INDUSTRIES CUSP. Diagnoses System Industries disk drives and formats System Industries packs.	System Industries Controller Manual	

A list of stand-alone OS/8 files, segmented by group name, is contained in Table 1-11.

Table 1-11
Stand-alone OS/8 Groups

<u>Group Name</u>	<u>File Names</u>
ETOS CUSP	BACKUP.SV, CDUMP.SV, CONFIG.SV, RKCOPY.SV, SICOPY.SV, TSC8.SV, XDDT.SV
ETOS MONITOR	ETOS.SV
ETOS OS/8	ETOSSET.SY
OS/8 CUSP	BOOT.SV, BUILD.SV, CCL.SV, CREF.SV, DIRECT.SV, DTCOPY.SV, DTFRMT.SV, EDIT.SV, EPIC.SV, FOTP.SV, FUTIL.SV, HELP.SV, PIP.SV, RESORC.SV, RKLFRMT.SV, RXCOPY.SV, SET.SV, TDCOPY.SV, TDFRMT.SV
OS/8 FILE	HELP.HL, INIT.CM
PAL8 ASSEMBLER	ABSLDR.SV, PAL8.SV
REAL OS/8	ETOSOS.SY
SYSTEM INDUSTRIES CUSPS	3040.SV

Most of the programs on the stand-alone system area are the same for all users. However, there are three files which differ for users of different types of system disks: ETOS.SV, ETOSOS.SY, and BUILD.SV. The ETOS monitor ETOS.SV contains the timesharing system disk driver. The stand-alone OS/8 system and the file ETOSOS.SY which contains a copy of the stand-alone head have different system device handlers for different disks. BUILD.SV contains different system handlers and auxiliary handlers for different types of disks.

When you LOGIN to ETOS, you are running in a multi-user environment. This is referred to as virtual OS/8. The CUSPs in the system area are OS/8 CUSPs which have been modified for ETOS and special ETOS CUSPs. The differences between the virtual OS/8

CUSPS and the stand-alone OS/8 cusps are listed in 4.3, ETOS User's Guide. Virtual SYS is a public area, accessible to all users. Under ETOS, this area is read or written on by accessing it as SYS or [0,2]OS8.RTS. A copy of the virtual OS/8 system head is contained in the stand-alone file ETOSET.SY.

The files distributed under virtual OS/8 are listed in Table 1-12. Your system contains only the software which you have a license for.

X = delete from working copy.

Table 1-12
Virtual OS/8 Files

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
ABSLDR.SV	PAL8 ASSEMBLER. Loads binary programs into memory.	OS/8 Handbook	Page 1-108
ACCNT.SV	ETOS CUSP. Creates, renames, lists ETOS files (accounts and account storage).	ETOS Mgr's Guide	Chapter 5
X ALGOP1.BA	EB BASIC DEMONSTRATION. Demonstration BASIC program, which drills stu- dents on algebraic operations.	Starter Kit Listing	
X BASIC.SV	EB BASIC. QUODATA's extended BASIC editor, compiler and run- time system.	EDUCOMP BASIC Manual	
BATCH.SV	OS/8 EXTENSION KIT. Processes OS/8 or SCALE commands from an OS/8 file.	OS/8 Handbook	Page 2-1
BITMAP.SV	PAL8 ASSEMBLER. Prints map of all memory locations used by a binary program.	OS/8 Handbook	Page 2-26
X BREAK.CS	VIRTUAL COS. Discussed in section 1.7.	ETOS User's Guide.	5.6
X BUILD.CS	VIRTUAL COS Discussed in Section 1.7.	COS300/310 System Reference Manual	Chapter 6

Table 1-12 (continued)

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
BUILD.SV	OS/8 CUSP. Changes active device handlers in virtual OS/8 system head.	OS/8 Handbook and ETOS Mgr's Guide	Page 2-34 6.4.1
CBASIC.OV	COMMERCIAL BASIC. Contains arithmetic file and string functions for the run-time system.	OS/78 User's Manual Update #1	Chapter 6
CBASIC.SV	COMMERCIAL BASIC. Allows creation and editing of BASIC programs.	OS/78 User's Manual Update #1	Chapter 6
CBCOMP.SV	COMMERCIAL BASIC. Compiles BASIC Source program into pseudo-compiled code.	OS/78 User's Manual Update #1	Chapter 6
CBLOAD.SV	COMMERCIAL BASIC. Loads pseudo-compiled programs into memory.	OS/78 User's Manual Update #1	Chapter 6
CBRTS.SV	COMMERCIAL BASIC. Runs pseudo-compiled programs.	OS/78 User's Manual Update #1	Chapter 6
CCL.SV	OS/8 CUSP. Concise command language which extends virtual OS/8 command structure.	OS/8 Handbook	Page 1-52
X COBOL.HE	COBOL/8. Header file inserted in each COBOL-generated SABR source file.	COBOL Manual Addendum	
X COBOL.SV	COBOL/8. Pre-compiler program which creates stripped source program DSK:SOURCE.DA from input program.	COBOL Manual or COBOL Manual Addendum	

Table 1-12 (continued)

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
X COBOLA.SV	COBOL/8. First pass of COBOL compiler, which accepts DSK:SOURCE.DA as input from COBOL.SV and generates DSK:COBOLA.DA.	COBOL Manual Addendum	
✓ COBOL1.SV	COBOL/8. Last pass of COBOL compiler. Accepts DSK:COBOLA.DA and generates SABR source program DSK:COBOLP.DA. COBOL1 chains to SYS:SABR.SV which completes the compilation.	COBOL Manual Addendum	
X COBOL8.RL	COBOL/8. Library contain- ing arithmetic functions called by COBOL programs.	COBOL Manual Addendum	
✓ COBOL9.RL	COBOL/8. Library contain- ing file functions called by COBOL programs.	COBOL Manual Addendum	
X COMP.CS	VIRTUAL COS. Discussed in Section 1.7.	COS300/310 System Reference Manual	Chapter 4
X CONVEX.CS	VIRTUAL COS. Discussed in Section 1.7.	COS300/310 System Reference Manual	
X COSBLD.SV	ETOS CUSP. Builds ETOS COS into a user's account storage area.	ETOS Mgr's Guide	5.5.2
✓ COSBO.SV	ETOS CUSP. Boots ETOS COS user account from OS/8.	ETOS User's Guide	5.1

Table 1-12 (continued)

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
X COSOS8.QB	QBOL UTILITY. Compiled QBOL program, which converts COS data files to QBOL data files.	QBOL Manual	Chapter 7
X COSOS8.QS	QBOL UTILITY. Source version of COSOS8.QB.	QBOL Manual	Chapter 7
X CREF.CS	VIRTUAL COS. Discussed in section 1.7.	COS 300/310 System Reference Manual	Chapter 14
CREF.SV	OS/8 CUSP. Cross references PAL8 and SABR source code.	OS/8 Handbook	Page 2-69
X DAFT.CS	VIRTUAL COS. Discussed in section 1.7.	COS 300/310 System Reference Manual	Chapter 11
X DEMOPY.CO	COBOL/8 DEMONSTRATION. Demonstration COBOL payroll program.	COBOL Manual	Sample Program #3
DFDIR.CS	VIRTUAL COS. Discussed in section 1.7.	COS 300/310 System	Chapter 17
X DIBOLQ.QB	QBOL UTILITY. Compiled QBOL program which converts COS programs to QBOL programs.	QBOL Manual	Chapter 8
X DIBOLQ.QS	QBOL UTILITY. Source version of DIBOLQ.QB.	QBOL Manual	Chapter 8
X DIPLO.BA	EB BASIC DEMONSTRATION. Simulation of Mid- East diplomatic crisis.	Starter Kit Listing	

Table 1-12 (continued)

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
DIRECT.SV	OS/8 CUSP. Lists directories of OS/8 peripherals	OS/8 Handbook	Page 2-77
DKCOPY.SV	ETOS CUSP. Allows on-line backup of ETOS system disk.	ETOS Mgr's Guide	6.6
DSKINT.SV	ETOS CUSP. Creates ETOS public packs for auxiliary account storage.	ETOS Mgr's Guide	5.11
X EBARD.BA	EB BASIC DEMONSTRATION. Generates random poetry.	Starter Kit Listing	
EDIT.SV	OS/8 CUSP. Creates ASCII files for use with COBOL, FORTRAN II, FORTRAN IV or PAL8.	OS/8 Handbook	Page 1-78
EPIC.SV	OS/8 CUSP. General purpose utility which compares, punches and modifies OS/8 mass storage.	OS/8 Handbook	Page 2-83
ERRCPY.SV	ETOS CUSP. Prints all RK05 disk errors which have occurred since previous run of the program.	ETOS Mgr's Guide	8.4.1
X EVOLU.BA	EB BASIC DEMONSTRATION. Simulation of en- vironmental effects of evolution.	Starter Kit Listing	
X FOCAL.SV	FOCAL. ETOS version of FOCAL language.	ETOS Mgr's Guide	5.16.1

Table 1-12 (continued)

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
X FORLIB.RL	FORTRAN IV. Library routines called by FORTRAN IV programs.	OS/8 Handbook	Page 8-40
X FORT.SV	FORTRAN II. Compiles FORTRAN II programs into SABR source code.	OS/8 Handbook	Chapter 7
FOTP.SV	OS/8 CUSP. Copies OS/8 files from one peripheral to another.	OS/8 Handbook	Page 2-97
FREE.SV	ETOS CUSP. Prints physical locations of free blocks in ETOS directory.	ETOS Mgr's Guide	8.6
X FRTS.SV	FORTRAN IV. Runs pseudo- compiled FORTRAN IV programs and sets device assignments.	OS/8 Handbook	Page 8-31
X FTBALL.BA	EB BASIC DEMONSTRATION. Allows user to simu- late football game with the computer.	Starter Kit Listing	
FUTIL.SV	OS/8 CUSP. General purpose utility which en- ables you to examine and modify the contents of mass storage devices.	OS/8 Handbook	Appendix K
X F4.SV	FORTRAN IV. Compiles FORTRAN IV programs into intermediate code and builds a symbol table. Chains to PASS2.SV.	OS/8 Handbook	Chapter 8

Table 1-12 (continued)

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
X GOLF.BA	EB BASIC DEMONSTRATION. Allows user to simulate golf game with the computer.	Starter Kit Listing	
X HELP.HL	OS/8 FILE. ASCII file which contains all HELP messages.	OS/8 Handbook Update	Page 11
X HELP.SV	OS/8 CUSP. Prints HELP messages from HELP.HL file.	OS/8 Handbook Update	Page 11
X HORS.BA	EB BASIC DEMONSTRATION Allows user to simulate horse race with the computer.	Starter Kit Listing	
INIT.SV	ETOS CUSP. Initializes system time and date.	ETOS Mgr's Guide	4.6
X INPUT1.DA	COBOL/8 DEMONSTRATION. File containing sample data for DEMOPY.CO sample payroll program.	COBOL Manual	Sample Program #3
INQUIR.SV	ETOS CUSP. Prints status of all ETOS channels.	ETOS User's Guide	4.8
KBASET.SV	SORT/8. Sets up sort parameters from an ASCII file.	SORT/8 Manual	Chapter 4
X KINERV.BA	EB BASIC DEMONSTRATION. Simulates kinetic energy experiments.	Starter Kit Listing	
KREF.SV	MACREL ASSEMBLER. Prints cross reference of MACREL source code.	MACREL User's Guide	

Table 1-12 (continued)

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
KRETRV.SV	SORT/8. Retrieves records via sorted key file to create sorted 8-bit out- put file.	SORT/8 Manual	3.1.3
KSETUP.BA	SORT/8. EB BASIC program which creates ASCII parameter file input to KBASET.SV.	SORT/8 Manual	Chapter 4
KSETUP.SV	SORT/8. Sets up sort para- meters from the terminal.	SORT/8 Manual	3.1.1
KSHUFL.SV	SORT/8. Merges sorted key files to create one sorted key file.	SORT/8 Manual	3.1.3
KSORT.SV	SORT/8. Creates sorted key files from 8-bit ASCII file and sort parameters.	SORT/8 Manual	3.1.2
LIBRA.SV	RALF ASSEMBLER. Creates or modifies a library of rou- tines (e.g., FORLIB.RL) from the relocatable output of RALF.	OS/8 Handbook	Page 8-41
LIBSET.SV	SABR. Creates or modi- fies a library of routines (e.g. LIB8.RL) from the relocatable binary output of SABR.	OS/8 Handbook	Page 4-68
X LIB8.RL	FORTRAN II. System library of functions called by FORTRAN II programs.	OS/8 Handbook	Page 4-68

Table 1-12 (continued)

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
f LINCHG.CS	VIRTUAL COS. Discussed in section 1.7.	COS 300/310 System Reference Manual	Chapter 16
LINK.SV	MACREL ASSEMBLER. Links relocatable binary modules in memory.	MACREL User's Guide	
LOAD.SV	RALF ASSEMBLER. Loads RALF re- locatable assembler programs into memory.	OS/8 Handbook	Page 8-20
LOADER.SV	SABR. Loads SABR re- locatable assembler programs into memory.	OS/8 Handbook	Page 4-62
LOGIN.SV	ETOS Monitor. Transferred to ETOS if LOGIN processor corrupted.	ETOS Mgr's Guide	5.12.3
LOOKUP.SV	ETOS CUSP. Facilitates access- ing of ETOS files (e.g., public pack, multiple OS/8 disks)	ETOS Mgr's Guide	5.14
MACREL.SV	MACREL ASSEMBLER. PDP8 relocatable MACRO assembler.	MACREL User's Guide	
X MOO.BA	EB BASIC DEMONSTRATION Simulates logic game identical to commercially pro- duced MASTERMIND game.	Starter Kit Listing	
X OBASIC.AF	OS/8 BASIC. Arithmetic func- tions for the run- time system.	OS/8 Handbook	Page 6-72

Table 1-12 (continued)

USAGE.SV	ETOS CUSP. Prints total connect-time and run-time for a specified account.	ETOS Mgr's Guide	6.4.14
WHO.SV	ETOS CUSP. Prints job infor- mation for current user.	ETOS User's Guide	4.7
6RETRV.SV	SORT/6. Retrieves records via sorted key file to create sorted 6-bit output file.	SORT/8 Manual	3.2.3
6SETUP.SV	SORT/6. Sets up sort para- meters from the terminal.	SORT/8 Manual	3.2.1
6SHUFL.SV	SORT/6. Merges sorted key files to create one sorted key file.	SORT/8 Manual	3.2.3
6SORT.SV	SORT/6. Creates sorted key files from 6-bit ASCII file and sort parameters.	SORT/8 Manual ETOS User's Manual	3.2.2 4.3

A list of virtual OS/8 system files, segmented by group name is contained in Table 1-13.

Table 1-13
Virtual OS/8 Groups

<u>Group Name</u>	<u>File Names</u>
COBOL/8	- COBOL.HE, COBOL.SV, COBOLA.SV, COBOL1.SV, COBOL8.RL, COBOL9.RL (EDIT.SV, LIB8.RL, LOADER.SV, SABR.SV also required)
COBOL/8 DEMONSTRATION	- DEMOPY.CO, INPUT1.DA
COMMERCIAL BASIC	- CBASIC.OV, CBASIC.SV, CBCOMP.SV, CBLOAD.SV, CBRTS.SV
EB BASIC	- BASIC.SV
EB BASIC DEMONSTRATION	- ALGOPl.BA, DIPLO.BA, EBARD.BA, EVOLU.BA, FTBALL.BA, GOLF.BA, HORS.BA, KINERV.BA, MOO.BA, PAY.BA, QUBIC.BA
ETOS CUSP	- ACCNT.SV, COSBLD.SV, COSBO.SV, DKCOPY.SV, DSKINT.SV, ERRCPY.SV, FREE.SV, INIT.SV, INQUIR.SV, LOOKUP.SV, SHUTUP.SV, SPOOLR.SV, SYSTAT.SV, TDSTOP.SV, TIME.SV, TTYSET.SV, USAGE.SV, WHO.SV
ETOS Monitor	- LOGIN.SV
FOCAL	- FOCAL.SV
FORTTRAN II	- FORT.SV, LIB8.RL (EDIT.SV, LOADER.SV, SABR.SV also required)
FORTTRAN IV	- FORLIB.RL, FRTS.SV, F4.SV, PASS2.SV, PASS20.SV, PASS3.SV (EDIT.SV, LOAD.SV, RALF.SV also required)
MACREL ASSEMBLER	- KREF.SV, LINK.SV, MACREL.SV, OVRDRV.MA, TASK.MA (EDIT.SV also required)
OS/8 BASIC	- OBASIC.AF, OBASIC.FF, OBASIC.SF, OBASIC.SV, OBASIC.UF, OBCOMP.SV, OBLOAD.SV, OBRTS.SV
OS/8 CUSP	- BUILD.SV, CCL.SV, CREF.SV, DIRECT.SV, EDIT.SV, EPIC.SV, FOTP.SV, FUTIL.SV, HELP.SV, PIP.SV, RESORC.SV, SET.SV, SQUASH.SV, SRCCOM.SV

Table 1-13 (continued)

<u>Group Name</u>	<u>File Names</u>
OS/8 EXTENSION KIT	- BATCH.SV, TECO.SV
OS/8 File	- HELP.HL
PAL8 ASSEMBLER	- ABSLDR.SV, BITMAP.SV, PAL8.SV (EDIT.SV also required)
QBOL	- P2ZZZZ.CB, P3ZZZZ.CB, P4ZZZZ.CB, P5ZZZZ.CB, P6ZZZZ.CB, P7ZZZZ.CB, P8ZZZZ.CB, P9ZZZZ.CB, QBOL.SV, QBOLCM.CB
QBOL UTILITY	- COSOS8.QB, COSOS8.QS, DIBOLQ.QB, DIBOLQ.QS
RALF ASSEMBLER	- LIBRA.SV, LOAD.SV, RALF.SV (EDIT.SV also required)
RUNOFF	- RUNOFF.SV
SABR ASSEMBLER	- LIBSET.SV, LOADER.SV, SABR.SV (EDIT.SV also required)
SORT/6	- 6RETRV.SV, 6SETUP.SV, 6SHUFL.SV, 6SORT.SV
SORT/8	- KBASET.SV, KRETRV.SV, KSETUP.BA, KSETUP.SV, KSHUFL.SV, KSORT.SV

Probably not all programs listed here will appear on your distribution disk. You will only have those programs on your distribution pack which you are licensed to use. This information is taken from your configuration guide. Some of the software requires a DIGITAL EQUIPMENT CORPORATION license, which may be obtained through QUODATA Corporation. The remainder of the software requires a QUODATA software license agreement. There is an additional fee for purchasing each product. A brief description of each of these licensed software products is given in Table 1-14.

Table 1-14
Licensed Product Descriptions

<u>Product</u>	<u>Description</u>
COBOL/8	- Subset of ANSII COBOL (Common Business Oriented Language). Features include business programming orientation, device independent I/O and transport ability of software. Intended as an instructional tool only. QUODATA software license required. Licensed programs consist of COBOL group and COBOL demonstration program files.
EB BASIC	- Extended version of BASIC (Beginner's All-Purpose Symbolic Instruction Code) language. Features include random access files, character strings up to 2000 characters in length and extended editing capabilities. QUODATA software license required. Licensed programs consist of BASIC and BASIC demonstration programs.
ETOS	- Extended Time Shared Operating System. QUODATA software license required. Licensed programs consist of ETOS monitor, ETOS CUSPS and ETOS versions of all other licensed software.
FOCAL	- FOCAL (Formula-Calculator) Language. No software license required. Language similar to BASIC and FORTRAN. Manual contained in documentation file on distribution pack. FOCAL consists only of the FOCAL group.
FORTRAN IV	- ANSII FORTRAN IV (Formula Translator) language. Features include program overlays, extended system library functions and random access files. Digital Equipment Corporation license required. Licensed programs consist of FORTRAN IV group and RALF group.
MACREL	- MACRO Relocatable Assembler Language. This assembler is an extended version of PAL8. Licensed programs consist of the MACREL group.

Table 1-14 (continued)

<u>Product</u>	<u>Description</u>
OS/8	- Operating system for the PDP8. Features include device independent programming, library of commonly used system programs (CUSPs), monitor commands and user-definable system commands via the concise command language (CCL). Digital Equipment software license required. Current OS/8 license is required for all ETOS users. Licensed programs consist of OS/8 CUSP group, OS/8 CUSP file group, FORTRAN II group, PAL8 Assembler group and SABR assembler group.
OS/8 EXTENSION KIT	- Extension to OS/8 system. Package allows batch OS/8 processing, powerful ASCII file manipulation and extended BASIC. Original extension kit included OS/8 BASIC only, which is documented in the OS/8 Handbook. An extended version of OS/8 BASIC called COMMERCIAL BASIC is available free of charge to all users who have a current extension kit license. Commercial BASIC features include random access files, string arithmetic of numeric character strings up to sixteen digits and extended error message print-out. QUODATA will distribute OS/8 BASIC and/or Commercial BASIC based on Configuration Guide. Digital Equipment software license required. Licensed programs consist of BATCH, TECO and OS/8 BASIC group or Commercial BASIC group.
QBOL	- QUODATA's Business Oriented Language (QBOL) for the PDP8. Features include compatability with DEC's DIBOL language, extended sort capabilities and accessibility to all OS/8 peripherals. QUODATA licensed programs consist of the QBOL group, the QBOL utilities, the SORT/6 group and the SORT/8 group.
RUNOFF	- Allows pagination, justification and other text processing features. Manual contained in documentation file on distribution pack. RUNOFF consists only of the RUNOFF group.
SORT/8	- Allows sorting of OS/8 ASCII files. Features include support of variable and fixed length records and one to eight key levels. QUODATA software license required. Licensed programs consist of the SORT/8 group.

1.7 REAL AND VIRTUAL COS

When the user bootstraps a standard COS pack, he is running in stand-alone mode. This is referred to as real COS. The CUSPs on this pack are unmodified CUSPs from Digital Equipment Corporation. This pack could be used to perform functions not supported under ETOS, such as 2780 communications.

When you LOGIN to ETOS, you are running in a multi-user environment. This is referred to as virtual OS/8. When you enter R COSBO<RET> in an account which you transferred COS into with the COSBLD program, you begin running virtual COS. The operating system has been modified to run under ETOS. The operating system which has been implemented under ETOS is COS 3.07G. There have been later releases of COS, but the changes have been in the devices which COS supports, the COS CUSPs and the date format. COS under ETOS has been modified to support these devices (e.g., PDP8A, RX01 floppy disk, LA180 line printer)). The CUSPs for later versions of COS can be transferred to ETOS (see 5.10.2). All cusps will operate unmodified except for formatting programs, FILEX and BOOT which must be run under single user COS. The date format is MM/DD/YY. To allow for dates past 1979, the base year has been moved from 1972 to 1979. Dates on newly saved files will be correct. Dates on previously saved files will be off by seven years. To correct these dates, rewrite the files. There have not been any changes to the DIBOL syntax. Therefore, the only changes required to convert stand-alone applications to ETOS are in the batch files and the SYSGEN tables, due to different device allocations.

Unlike OS/8, COS is not a shared operating system. Therefore, each user has his own copy of COS and his own SYSGEN table. This area is accessed as DK0 under COS or [project number, programmer number|COSDISK.RTS under ETOS, where the project number and programmer number make up the account number containing the COS

file.

Each user also has his own copies of any programs he wishes to run. These may be user written source or compiled DIBOL programs or commonly used system programs (CUSPS). These CUSPS are unmodified COS300 system programs with several exceptions. BREAK, OS8BO and UNBRK are CUSPS which are used to control ETOS files and attributes. PIP has been modified to accept DK0 through DK7, instead of DK0 through DK3. SYSGET is used instead of SYSGEN to assign logical units. On the distribution pack, COS CUSPS are stored on virtual OS/8 SYS, with the extension ".CS". After COSBLD is used to transfer COS to an account (see 5.5.2), these COS CUSPS are transferred to the COS account. The extension is changed to ".SV" so that they may be executed with the "R" command. The files distributed under virtual COS are listed in Table 1-15. These programs are discussed in greater detail in the ETOS User's Guide, Chapter 5.

Table 1-15
Virtual COS Files

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
BREAK.SV	ETOS CUSP. Enables COS to break on every character input. This is not neces- sary unless a ter- minator is not a control character.	ETOS User's Guide	5.6
BUILD.SV	COS CUSP. Creates data files contain- ing fixed length records.	COS300/310 System Reference Manual	Chapter 6
COMP.SV	COS CUSP. Compiles DIBOL source files into pseudo-compiled form which can be executed.	COS300/310 System Reference Manual	Chapter 4
CONVEX.SV	COS CUSP. Converts OS/8 ASCII files to DIBOL data files and vice versa.	COS300/310 System Reference Manual	
CREF.SV	COS CUSP. Prints alphabetical listing of all symbols used in a DIBOL source pro- gram.	COS300/310 System Reference Manual	Chapter 14
DAFT.SV	COS CUSP. Allows you to search for, examine, change or list data file records.	COS300/310 System Reference Manual	Chapter 11

Table 1-15 (continued)

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
DFDIR.SV	COS CUSP. Prints a list of each logical unit assignment and its contents.	COS300/310 System Reference Manual	Chapter 17
LINCHG.SV	COS CUSP. Temporarily changes number of lines per line printer page.	COS300/310 System Reference Manual	Chapter 16
OS8BO.SV	ETOS CUSP. Allows COS user to boot virtual OS/8.	ETOS User's Guide	5.1
PATCH.SV	COS CUSP Patches system programs or a COS monitor.	COS300/310 System Reference Manual	Chapter 10
PIP.SV	COS CUSP. Transfers data files or programs between COS peri- pherals.	COS300/310 System Reference Manual	Chapter 5
PRINT.SV	COS CUSP. Generates DIBOL report program from a parameter file.	COS300/310 System Reference Manual	Chapter 15
SORT.SV	COS CUSP Sorts COS data files in order according to specified keys.	COS300/310 System Reference Manual	Chapter 7
SYSGET.SV	ETOS CUSP. Utilized in place of SYSGEN to assign logical units.	ETOS User's Guide	5.5
UNBRK.SV	ETOS CUSP. Restores COS break mask to its original value of 607.	ETOS User's Guide	5.6

Table 1-15 (continued)

<u>File Name</u>	<u>Group Name And Use</u>	<u>Documented In Manual</u>	<u>Manual Section</u>
UPDATE.SV	COS CUSP. Allows you to change, insert or delete records in a COS data file according to a control program.	COS300/310 System Reference Manual	Chapter 8

A list of virtual COS system files, segmented by group name, is contained in Table 1-16.

Table 1-16
Virtual COS Groups

<u>Group Name</u>	<u>File Names</u>
COS CUSP	BUILD.SV, COMP.SV, CONVEX.SV, CREF.SV, DAFT.SV, DFDIR.SV, LINCHG.SV, PATCH.SV, PIP.SV, PRINT.SV, SORT.SV, UPDATE.SV
ETOS CUSP	BREAK.SV, OS8BO.SV, SYSGET.SV, UNBRK.SV

If you have a COS license from Digital Equipment Corporation, you will have ETOS COS and the above programs on your distribution disk. This license must be purchased from DEC at the time you purchase the machine. You cannot purchase COS at a later date, since it has to be bundled with a processor. The only exception to the purchase of the license from DEC is that you may buy a used machine and utilize a COS license which was purchased with the machine originally.

There is no copy of stand-alone COS on the ETOS pack. To transfer files from a stand-alone COS pack to a virtual COS account, see 5.10.2.

1.8 CONVENTIONS USED IN THIS MANUAL

Certain documentation conventions are used throughout this manual to clarify examples of ETOS syntax. These conventions are

- a. Capital letters and special characters such as commas and colons appear verbatim in the user's command. Keywords in capital letters may sometimes be abbreviated. For example

BROADCAST message may be abbreviated as BRO message

- b. Square brackets indicate that the bracketed item is optional. For example

PRIV [n]

Square brackets are also used to enclose ETOS account numbers, and in this context they do not indicate that the item is optional. Examples

[proj,prog]
or
[account]
or
[56,77]

However, an entire account specification may be enclosed in brackets to indicate that it is optional. Example

[[proj,prog]]

- c. Ellipses (successive periods) ... are used in conjunction with square brackets to indicate that the previous parameter may be repeated indefinitely, as when inputting a list of numbers. Example

POKE n,m1[,m2[,...]]

- d. Items in lower case type (channel, device, length, etc.) are supplied by the user according to rules explained in the text. For example

FORCE n;command

- e. Words that the user enters are underlined. Words that the computer prints are not underlined.

- f. Special input characters are indicated by a code enclosed in angle brackets, as listed below

<u>Code</u>	<u>Character</u>	<u>ASCII Code</u>
<RET>	Carriage Return	215
<ALT>	Altmode	233, 375, or 376
<RO>	Rubout (Delete)	377
<LF>	Line Feed	212

- g. Control characters are indicated by an uparrow followed by an alphabetic character. Example

<u>Code</u>	<u>Character</u>
^C	Control-C
^V	Control-V
etc.	

- h. User input is terminated by a carriage return unless otherwise indicated.
- i. If a reference is made to a section in another manual, the manual name is included. If a reference is made to a section in this manual, the manual name is omitted.
