SOFTWARE INFORMATION SERVICE

SOFTWARE PERFORMANCE SUMMARY

This Software Performance Summary is intended to supplement your set of Family of 8 software. It contains all current information on known software problems, patches, manual corrections and programming notes. Each article is coded sequentially by system program in the lower right hand corner. As new versions correct software problems and reprinted manuals include programming notes and manual corrections, new articles will announce the revised software and specify by this code which articles should be removed from your Software Performance Summary file. Articles may also be replaced when new information becomes available; such as, a procedure to circumvent a problem may replace the original report of the problem. This information, as well as newly discovered problems, methods, etc., is printed in Digital Software News for the PDP-8 & PDP-12. To assure that the monthly Digital Software News is sent to the appropriate software contact at your installation, please check with the Software Specialist or Sales Engineer at your local Digital Office.

Additional copies of the current Software Performance Summary and updated copies of the PDP-8/12 Software Price List are available at no charge upon request from the Program Library. As with usual orders for software, the Program Library will accept orders received directly from U.S. customers. All other customer orders must be routed through the nearest Digital Representative.
