I was reading the README FIRST !!! file and found a few minor mistakes and I added a few things [this of course will go on indefinitely, but I want to get it out the door; later we can "leisurely" go over all documentation files].

More importantly, I was able to make it a just under 5 MB file as a self-extracting archive [using .7z format]. This change will require redoing it, but won't materially change the size. [Now done and attached; change the extension to .exe.] [Note: It's about a 75% size reduction! from 20 MB to 5 MB, etc.]

We should schedule a session tomorrow or Sunday so I can help you get it up and running. That way, we can discuss if you think THIS readme file [or perhaps another one in the package] needs any last-second update worthy of the Version 1.0 "alpha" release, etc.

It really doesn't matter if you read this for changes before we talk via Google Voice as I will be explaining more than reading. Once you have a first-hand view, it will be easier to comment on all document changes.
