

1. IDENTIFICATION
- 1.1 Maindec-801-1
- 1.2 PDP-8 Instruction Test Part 1
- 1.3 May 14, 1963

2. ABSTRACT

This program is a minimal test of the memory reference instructions, operate instructions, interrupt mode and keyboard printer. This test should be used when the state of the processor prevents reading of more advanced diagnostic programs. It is simply a "go-no go" test of the instructions and is not meant to be diagnostic in nature.

3. REQUIREMENTS

3.1 Storage

Memory locations  $20_8 - 1177_8$

3.2 Subprograms and/or Subroutines

High RIM Loader

3.3 Equipment

PDP-8 Processor, Keyboard Reader, and Teleprinter

4. USAGE

4.1 Loading

4.1.1 RIM Loader. If the RIM Loader beginning at 7756 is in memory go to section 4.1.2, otherwise load the RIM Loader via the SWITCH REGISTER.

PDP-8 Instruction Test Part 1 may now be loaded as follows:

4.1.2 Set 7756 in the SWITCH REGISTER.

4.1.3 Press LOAD address key.

4.1.4 Place Instruction Test Part 1 in the keyboard reader.

4.1.5 Press START key on the operators console.

4.1.6 Engage the keyboard reader.

4.2 Calling Sequence (Not Available)

4.3 Switch Settings

Set the SWITCH REGISTER keys to 7777 when starting the program.

4.4 Start-Up and/or Entry

The starting address of the PDP-8 Part 1 Instruction Test is  $0200_8$ .

Set 0200 in the SWITCH REGISTER.

Press the LOAD address key.

Set the SWITCH REGISTER keys to 7777.

Press the START key.

Should STOP AT PC 201 AC = 0 PRESS CONT.  
" " " PC 203 AC = -1 " "  
" " " PC 206 AC = 0 " "  
SHOULD RUN

## 4.5 Errors in Usage

Errors detected by the program set the processor to a halt, with the exception of a TTY printer error and three visual inspection halts.

Each test has its own error halt address.

Each halt in the listing has a description to which the user is directed should any of the halts occur.

## Error Halt List:

#### 4.6 Recovery from such Errors

Press CONTINUE key to continue to the next test in sequence. Deposit JMP instructions at the error halt address and normal test exit address to enter a scope mode. Upon completion of the scope mode, the original contents of the addresses changed must be restored.

#### 5. RESTRICTIONS (None)

#### 6. DESCRIPTION

##### 6.1 Discussion

The PDP-8 Instruction Test Part 1 is a minimal test of the memory reference instructions, operate instructions, interrupt mode, and keyboard printer.

An instruction and its hardware are tested by comparing a test pattern with the results of an operation. If the comparison is true, we exit to the next test in sequence. If false, we halt at a pre-determined error stop. At this error stop in the listing, an explanation of the error will be found. The correct contents of the accumulator will also be contained on the listing where applicable. If the instruction under test is a decision type, a test pattern is tested.

The test starts at memory address 0200<sub>g</sub>. Memory addresses 0200<sub>g</sub>, 0202<sub>g</sub>, and 0205<sub>g</sub>, are visual inspection halts. Upon completion of the visual inspection halts, the program has no other non-error halts. The program has two sets of typeouts:

?@? This typeout is a minimal keyboard printer test.

1 This typeout shows test completion.

The Teletype could be turned off after first pass. The program will loop between 0206<sub>g</sub> and 1117<sub>g</sub> until an error occurs. The program is assembled in RIM format due to the minimal use of hardware by the RIM Loader.

## 6.2 Example

An example of a particular test, in this case testing the link, follows:

Set link to a 1.

Clear link to a 0.

Skip to next test if link is equal to a 0.

If link equals a 1, halt.

## 7. METHODS

See section 6.

## 8. FORMAT (Not Applicable)

## 9. EXECUTION TIME

1 second.
