BIN AND CBL LOADER

DECUS Program Library Write-up

DECUS No. 8-338

ABSTRACT

The combination BIN and CBL loader is used to load paper tapes in either BIN or CBL format. The program features automatic selection of the format in use so no switch register setting is needed. The program currently operates with the PR-8 high speed paper tape reader but it can be modified to use the ASR-33 reader.

OPERATING PROCEDURE

The BIN and CBL loader is operated as follows. With the loader in core a binary tape is placed in the reader. Be sure that the leader-trailer (code 200) is placed over the sensors. The switch register is then set to 7777 and Load Address is depressed. Note that the loader does not process memory fields, so the proper instruction and data fields must be set before Load Address is depressed. The Start key is depressed after the load address key. The tape will start through the reader. If correct reading has occurred the loader will halt at the end of the tape with a zero accumulator. If a checksum error is detected on a CBL tape, the loader will halt at the end of the block in question with a non-zero accumulator. The error may be ignored by pressing Continue, or the block can be reread by backing up the tape to the beginning of the block and depressing Continue. On BIN tapes a checksum error will be indicated by a non-zero accumulator when the loader halts at the end of the tape. The entire tape must be reread to correct the error. Note that if a tape is in two or more sections the second section may be loaded by pressing Continue only if the second section is in the same format as the first half. Otherwise the loader must be restarted at 7777.

LOADING PROCEDURE

The CBL and BIN loader is furnished on paper tape in RIM format. Therefore, it must be loaded into memory with a RIM loader. As the BIN and CBL loader occupies virtually all of the last page of whatever memory field it is in, the RIM loader must not be on the same page and field as the BIN and CBL loader is being placed as certain complications would arise if this were attempted.
