PROGRAM REPLICATION

ABSTRACT:

This FOCAL program is intended as a vehicle for the essential single line 06.01 which specifies the immediate-mode command.

This FOR command will cause the program presently in core to be typed out the specified number of times with the specified number of lines between each copy of the program.

The search feature was employed to facilitate cutting the TTY paper into individual pages.

The program as provided will make ten copies of itself as soon as it has loaded, and the G followed by a CARRIAGE RETURN are read from the tape.
